CEO Compensation - Long-Term Performance Alignment

Question

Does the company reports on the performance-based variable compensation system for its CEO?

Rationale

Both financial and non-financial metrics are becoming increasingly important in determining variable compensation for executive management and more specifically the CEO. In this question, we assess time vesting and performance periods that are used for determining the CEO's variable compensation. A longer vesting period ensures that the interests of management and the long-term interest of shareholders are better aligned. Additionally, we assess if the short-term bonus is deferred in shares or stock options.

Economic alignment of management with the long-term performance of the company is an essential component of executive compensation. This alignment can be achieved in several ways, including deferral of short term compensation, time vesting and long term performance periods. Alignment with long term performance is particularly important during periods of short CEO tenure, as the risk of short-termism increases. For example, in 2008, CEOs of S&P 500 companies held their position for an average of just 7.2 yrs. This has subsequently increased to 10.8 years in 2015 as the economy recovered and turnover declined, but the risk of a reversion remains. (Matteo Tonello, The Conference Board, Inc., 2016). A longer vesting period ensures that the interests of management and the long-term interest of shareholders are better aligned.

Key Definitions

Deferred shares: refer to the percentage of the short-term bonus paid out in deferred shares instead of cash. The company can choose to pay-out the annual short-term bonus in deferred shares to the CEO and other executive directors which is seen as a best practice.

Deferred bonus compensation is an arrangement in which a portion of an employee's income is paid out at a later date after which the income was earned during a set performance period.

Performance period: This refers to a performance-based pay-out structure of variable compensation for the cur-rent period x which is dependent on achieving targets in the following periods (x+1, x+2, x+3 , etc.). Please note that option- and stock-based compensation for which the number of options or stocks rewarded is not dependent on future performance do not count as performance vesting but are considered as time vesting.

Example: "The actual number of shares that may become earned and payable under the awards will generally range from 0% to 200% of the target number of units based on achievement of the specified goals over a two-year period."

A clawback provision: a policy that allows a company to recover performance-based compensation for some period of time after compensation awards are granted. Clawback provisions may apply to short and/or long term awards. The circumstances and conduct that would trigger clawback provisions include, but are not limited to, restatement of financial results, errors in financial information reported, misconduct by the employee directly, or misconduct by any other employee that results in incorrect financial reporting.

Time vesting: refers to time-based pay-out structures of variable compensation for the current period x over the coming years (x+1, x+2, x+3, etc.). The amount of future pay-out is independent of the coming year's performance. If all long-term incentives are based on future performance, the same figure should be given for the longest performance period and the longest time vesting period.

We accept the total number: the sum of the vesting period and the required holding period.

Data requirements

In this question, we assess the time vesting and performance periods as well as whether the company has a clawback provision in place. In addition, we asses if the short-term bonus is deferred in shares or stock options.

The question applies to **CEO compensation only.**

GRI Standard 102-35 is relevant for this question.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Guidelines on deferred bonus, time vesting, and performance period for the CEO's variable compensation available publicly	Not known - unknown
Percentage of the CEO's short-term incentive/bonus deferred in the form of shares or stock options	Not known - unknown
Longest performance period covered by the executive compensation plan (years)	Not known - unknown
Clawback provision in place	Not known - unknown
Longest time vesting period for variable CEO compensation (years)	Not known - unknown

Questionnaire

Does your company have the following compensation structures in place to align with long-term performance? Please indicate where this information is available in your **public reporting** or **corporate website**.

1. ○ Yes, our company has guidelines on deferred bonus, time vesting, and performance period for the CEO's variable compensation.

   Deferral of Bonus for Short-term CEO Compensation

   Is a portion of the CEO's short-term incentive deferred in the form of shares or stock options?

   Please indicate the percentage of the short-term bonus deferred in the form of shares or stock options:

   Not known - unknown

   Performance Period for Variable CEO Compensation

   What is the longest performance period applied to evaluate variable compensation(based on predefined targets, either relative or absolute), covered in your executive compensation plan? Is there a clawback policy in place? Please note that compensation that only is time vested is not considered as performance based compensation in this part of the question.

   Please indicate the longest performance period covered by your executive compensation plan:

   Not known - unknown

   1. ○ We have a clawback provision in place. Please specify:

   Time Vesting for Variable CEO Compensation

   Please indicate the longest time vesting period for variable CEO compensation:

   Not known - unknown

2. ○ No, we do not have a performance-based variable compensation system.
3. ○ Not applicable. Please provide explanations in the comment box below.
4. ○ Not known
