Question: Financial Risks of Climate Change
Include Modeled Scores : Yes

Financial Risks of Climate Change

Question

Has the company identified any climate change risks (current or future) that have potential to generate a substantive change in its business operations, revenue or expenditures?

Rationale

With this question we aim to find out if companies have identified the risks where there is the potential for substantive changes in business operations, revenue or expenditure to arise.

Performance Summary	
Question Level Company Performance	80
Question Weight	6
Year-on-Year Change	10
Industry Average Score	33
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Climate change risks: can include, but are not limited to:

- Currently being experienced or expected to arise in the future
- Already managed and therefore not expected to generate negative residual impacts (e.g., because of an insurance policy)
- Newly identified
- Risks which cannot be managed
- Well understood or with high levels of uncertainty with regard to the likelihood of the risk materializing and the extent to which it will impact the business

Regulatory risks: arise from current and/or expected city, state, regional, national or global governmental policy related to climate change. Risks include, but are not limited to, the imposition of emissions limits, energy efficiency standards and carbon trading schemes.

Physical risks: may arise from dramatic extreme weather events or subtle changes in weather patterns.

Other climate-related risks: include, but are not limited to: reputation, changing consumer behavior, induced changes in human and cultural environments, fluctuating socio-economic conditions and increasing humanitarian demands.

Under **financial implications:** you are asked to provide quantitative estimates of the inherent financial impacts of the risks before taking into consideration any controls you may have in place to mitigate the impacts. An example would be the cost of destruction of facilities from extreme weather before taking into consideration how much insurance coverage you have. It is acknowledged that these will be estimates.

The **methods:** you are using or plan to use to manage the risk could include diversification of product/service offering, research and development in new product lines or lobbying of decision makers. In all cases please identify how this action has affected (or is expected to affect) the likelihood and/or magnitude of the risk (i.e., the residual risk) and over what time frame the risk is expected to or has been reduced.

The **costs associated:** with the management actions you have described can be annual or capital costs. Where there is no additional cost for action, please explicitly state this is the case. Where the cost is integrated into existing budgets, please provide some estimate of the scale of those costs.

Time frame: the time frame refers to the time when you expect the risks are likely to materialize. It is acknowledged that risks further into the future are likely to have a higher degree of uncertainty associated with them.

For companies submitting to CDP: please use the average between the two numbers of the time frame range. E.g., if the estimated time frame for financial implications of this risk is between 0 and 3, please disclose “1.5 years” ((0+3)/2 = 1.5) in the estimated time frame field.

Data Requirements

Please describe and provide figures concerning the most significant risk from each category (i.e., the risk which has the most potential to generate a substantive change in your business operations, revenue or expenditure). Please provide quantification of climate change risks for those parts of the business where such analysis has been conducted. If this assessment does not cover all business operations, please provide data for those measured areas only and provide an explanation of which areas are covered in the comment box.

Disclosure Requirements

Disclosure requirements for partially public question: Additional credit will be granted for relevant publicly available evidence for the following:

- Description of risks driven by changes in regulation
- Description of risks driven by changes in physical climate parameters or other climate-change related developments
- Estimated financial implication of the risk(s)

Supporting evidence:

- The document(s) you attach will be used to verify the qualitative part of your response. If a question text field is available, a comprehensive answer in that field can be accepted instead of a supporting document. Any qualitative response that cannot be verified in the attached document(s) or via the information provided in the related question text field (if available) will not be accepted.
- Quantitative figures provided in the response do not need supporting evidence. You may still provide a reference using the reference clip. This could include examples of the underlying calculations or approaches to data aggregation used to compile the provided quantitative information.

Questionnaire

Have you identified any climate change risks (current or future) that have potential to generate a substantive change in your business operations, revenue or expenditures?

1. (●)

   Yes, we have identified climate change-related risks with potential impact. Please estimate the financial impact for the most significant risk from each category and provide supporting evidence:

   Risks driven by changes in regulation:

   Currency:

   1. ☐

      Information is available publicly for the description and estimated financial implications of the risk

   2. ☑

      Brief description of the most significant risk and methods used to manage this risk:

   3. ☑

      Estimated financial implications of the risk before taking action:

      9171076500

      Average estimated time frame (in number of years) for financial implications of this risk:

      5

   4. ☑

      Estimated costs of these actions:

      20000

   Risks driven by change in physical climate parameters or other climate-change related developments

   Currency:

1. ☐

   Information is available publicly for the description and estimated financial implications of the risk

2. ☑

   Brief description of the most significant risk and methods used to manage this risk:

3. ☑

   Estimated financial implication of the risk before taking action:

   8509045500

   Average estimated time frame (in number of years) for financial implications of the risk:

   10

4. ☑

   Estimated costs of these actions:

   20000

2. ○

   We have conducted an analysis of our climate change risk, but our company is not exposed to climate change risks that have the potential to generate a substantive change in business operations, revenue, or expenditure.

   Not answered

3. ○

   We have not conducted an analysis related to climate change risks.

4. ○

   Not applicable. Please provide explanations in the comment box below.

5.
