Question: Indirect Greenhouse Gas Emissions (Scope 2)
Include Modeled Scores : Yes

Indirect Greenhouse Gas Emissions (Scope 2)

Question

Does the company track its indirect greenhouse gas emissions (Scope 2)?

Rationale

The purpose of this question is to capture the company's indirect greenhouse gas (Scope 2) emissions and assess the overall trend. Emissions can serve as a critical indicator of a company's impact on the climate. Increasingly, the disclosure of emissions is expected from investors, and growing regulatory pressure has led to the mandatory disclosure of certain emissions. By disclosing emissions, investors and stakeholders can ascertain a company's climate risks and identify trends in emissions reduction to benchmark against competitors.

Performance Summary	
Question Level Company Performance	100
Question Weight	13
Year-on-Year Change	0
Industry Average Score	49
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

GHG scope 2: Indirect impacts - energy use: Many companies report on the GHG emissions incurred in the generation of the electricity they consume and for service companies these indirect emissions can be more important than their direct environmental impacts. There are also some ways that companies can mitigate these emissions, for example by paying a renewable tariff or improving energy efficiency.

Location-based method: It reflects the average emissions intensity of grids on which energy consumption occurs (using mostly grid-average emission factor data).

Market-based method: It reflects emissions from electricity that companies have purposefully chosen (or their lack of choice). It derives emission factors from contractual instruments, which include any type of contract between two parties for the sale and purchase of energy bundled certificates or for unbundled instruments on their own. Even companies that do not purchase any market instrument are expected to report market-based emissions. As per the GHG Protocol's requirements, they shall do so by using their electricity supplier's emission rate, or by using the residual mix, i.e., regional emission factors representing the untracked or unclaimed energy and emissions. If such data is not available, then their market-based emissions will be equal to their location-based emissions.

Data Requirements

Greenhouse gas emissions should be reported as metric tons of CO2-equivalents. Data on greenhouse gas emissions should include CO2 and all other greenhouse gas emissions weighted according to greenhouse gas potential.

Please report both your location-based emissions, as well as your market-based emissions.

Disclosure requirements for partially public question. Additional credit will be granted for relevant publicly available evidence covering the following aspect of this question:

- Indirect greenhouse gas emissions (scope 2) figure for at least the most recent reported year for at least one of the two Scope 2 reporting methods.

Third-party verification: We expect that data in the most recent year reported, for at least one reporting method, has been third-party verified and that relevant documentation is attached showing this verification. Internal audits or verification will not be considered.

Please note: In case the company **has reported a value of zero** in the table, third-party verification or supporting evidence is required (e.g., comprehensive comment, internal documentation or public reporting) to substantiate the zero reported.

Data Consistency

- If the environmental performance data reported in the questionnaire do not correspond to the publicly reported figures, the corresponding option should be marked and the discrepancy should be explained. This option should not be indicated if the information is not publicly reported at all.
- If there is a temporary reduction in coverage due to a corporation action, the corresponding box should be marked and the reduction should be explained
- If it is not possible to report the figures in absolute terms, the data should be reported in relative terms and the corresponding box should be ticked. Please note that information should always be reported in absolute terms if possible, even if it deviates from public reporting.
- If GHG emissions are only reported and tracked as combined Scope 1 and Scope 2 emissions, the combined figures should be indicated in the previous question (Direct Greenhouse Gas Emissions (Scope 1), the corresponding box should be ticked and this question, should be marked as "Not applicable".

General Data Requirements

Environmental performance data should cover the activities of the entire company with the same consolidation as used in financial reporting and must refer to the financial year (e.g., 01/01 to 31/12 for both financial and environmental data) and be aligned with the figures reported in the Company Information section.

Target: we require the absolute target for the most recent reporting year. If your company has a multiple-year and/or relative target, please extrapolate what the target value would have to be for the last financial year to make sure you are progressing well towards achieving the target by the end of the target period. If you report a combined Scope 1 + Scope 2 target, please extrapolate the share equivalent to the absolute Scope 2 emissions for inclusion in the table.

Environmental performance data should only cover the indirect emissions/resource use, i.e., resource use/emissions caused by the company and its consolidated activities. Emissions and resource use of suppliers and customers should be excluded. In particular, the environmental data of group companies should follow the following rules:

- Environmental data of companies that are consolidated proportionally must be considered to the proportion at which they are consolidated financially.
- Environmental data of companies that are fully consolidated must be fully considered irrespective of the proportion to which they belong to the group.
- Environmental data of business travel other than by owned and/or operated fleet should not be included unless specifically asked for.
- Environmental data should refer to the specific company structure of each particular year. There should be no pro-forma backward consolidation of the current company structure.
- Environmental data of companies that are sold or no longer consolidated should be excluded from environmental data as of the reporting period in which the company has not been consolidated anymore.
- Environmental data of companies that have been bought should only be included as of the reporting period in which the company is consolidated financially for the first time.
- Where environmental data does not cover all consolidated activities of the company, the scope should be indicated together with the environmental data that is known.
- For indicators where a company has no emissions/resource use, 0 should be filled.
- Where the reported environmental data deviates from these definitions you are asked to explain in what way the data provided differs from the definitions.
- If a company publicly reports on long-term but not annual targets, an annual target has to be estimated based on internal target setting or a linear distribution.
- The data must be provided in the unit indicated in the question. If the company is tracking the specific indicator in a different unit, the unit converter must be used to convert the data into the preferred unit.
- Please ensure that the Company Information section has been correctly filled in, and that the coverage in the table below is based on the same denominator.

QUESTION LEVEL INPUT	COMPANY ANSWER
Reliable and auditable data for company's indirect GHG emissions (Scope 2)	Applicable
Market based indirect Greenhouse Gas Emissions from energy purchased and consumed (scope 2) (2020) (met. ton. CO2e)	198,346.000
Market based indirect Greenhouse Gas Emissions from energy purchased and consumed (scope 2) (2021) (met. ton. CO2e)	128,019.000
Market based indirect Greenhouse Gas Emissions from energy purchased and consumed (scope 2) (2022) (met. ton. CO2e)	61,393.000
Market based indirect Greenhouse Gas Emissions from energy purchased and consumed (scope 2) (2023) (met. ton. CO2e)	36,575.000
Target for market based indirect Greenhouse Gas Emissions for last fiscal year reported (met. ton. CO2e)	315,305.000
Indirect Greenhouse Gas Emissions: Data coverage for market based emissions (2020)	100
Indirect Greenhouse Gas Emissions: Data coverage for market based emissions (2021)	100
Indirect Greenhouse Gas Emissions: Data coverage for market based emissions (2022)	100
Indirect Greenhouse Gas Emissions: Data coverage for market based emissions (2023)	100
Public reporting: Indirect GHG Emissions (scope 2) data is publicly available	YES
Third party verification: Indirect GHG Emissions (scope 2) data verified by third party in the most recent fiscal year reported	YES
Data consistency: Indirect GHG Emissions (scope 2) data reported in the questionnaire differs from publicly available data	-
Data consistency: Temporary coverage reduction or target challenge in Indirect GHG emissions (Scope 2) data due to corporate actions	-
Data consistency: Indirect GHG Emissions (scope 2) data is not reported in absolute terms and is normalized	-
Location based indirect Greenhouse Gas Emissions from energy purchased and consumed (scope 2) (2020) (met. ton. CO2e)	518,886.000
Location based indirect Greenhouse Gas Emissions from energy purchased and consumed (scope 2) (2021) (met. ton. CO2e)	479,284.000
Location based indirect Greenhouse Gas Emissions from energy purchased and consumed (scope 2) (2022) (met. ton. CO2e)	461,252.000
Location based indirect Greenhouse Gas Emissions from energy purchased and consumed (scope 2) (2023) (met. ton. CO2e)	498,859.000
Target for location based indirect Greenhouse Gas Emissions for last fiscal year reported (met. ton. CO2e)	508,294.000
Indirect Greenhouse Gas Emissions: Data coverage for location based emissions (2020)	100
Indirect Greenhouse Gas Emissions: Data coverage for location based emissions (2021)	100
Indirect Greenhouse Gas Emissions: Data coverage for location based emissions (2022)	100
Indirect Greenhouse Gas Emissions: Data coverage for location based emissions (2023)	100

Questionnaire

Please provide your company's indirect greenhouse gas emissions from energy purchased (purchased and consumed, i.e. without energy trading) (IGHG SCOPE 2) for the part of your company's operations for which you have a reliable and auditable data acquisition and aggregation system. For each row in the table, it is mandatory that the values provided are in the same unit. Please ensure that you have correctly filled in the Company Information section at the beginning of the questionnaire, and that the coverage in the table below is related to the denominator relevant for your company as indicated in that section. **As prescribed by the GHG Protocol, we expect all companies to report both location-based and market-based emissions.** Please refer to the information button for additional clarifications on how to report on market-based emissions.

1. (●)

IGHG (Scope 2)	Unit	FY 2020	FY 2021	FY 2022	FY 2023	What was your target for FY 2023?
Location-based	metric tonnes of CO2 equivalents	518886	479284	461252	498859	508294
Data coverage (as % of denominator)	percentage of:	100	100	100	100	
Market-based	metric tonnes of CO2 equivalents	198346	128019	61393	36575	315305
Data coverage (as % of denominator)	percentage of:	100	100	100	100	

PUBLIC REPORTING

1. [x]

Our data is publicly available. Please provide supporting evidence or web link.

THIRD-PARTY VERIFICATION

1. [x]

Our data has been third-party verified in the most recent financial year reported. Please provide supporting evidence.

DATA CONSISTENCY

1. [ ]

We report publicly on this information, but the data in the table above differs from our publicly reported figures. Please provide an explanation in the comment box for this difference:

2. [ ]

We have a temporary coverage reduction or target challenge due to corporate actions. Please briefly explain if a merger, acquisition, divestment, etc. has temporarily caused a reduction in your ability to report optimal coverage or caused your target to appear abnormal:

3. [ ]

We are not able to report this information in absolute terms, the information provided in the table above is normalized data. For the purpose of this question, please always provide absolute figures if available.

2. ( )

We do not track indirect greenhouse gas emissions.

3. ( )

Not applicable. Please provide explanations in the comment box below.

4. ( )

Not known

Confidential additional comments

Use the text field below only in the following cases: (i) to describe significant changes in data or calculation methodology compared to last year's submission, (ii) to explain why a question is not applicable to your company's business model, (iii) to explain if your data deviates from the unit or format requested, or (iv) to provide supporting notes on translations of non-English references.
