Physical Climate Risk Adaptation

Question

Does the company have an existing plan to adapt to physical climate risks?

Rationale

The climate risk assessment of physical and transition risks builds the basis for companies to plan adaptation and mitigation measures in response to those risks. Adaptation and mitigation measures are ideally planned so that context-specific factors are considered for all relevant assets and operations, since climate-related hazards are location and context-specific.

This question focuses specifically on adaptation measures for physical risks. Climate change adaptation can be understood as anticipating the adverse effects of climate change and taking appropriate action to prevent or minimize the damage it can cause. It includes business opportunities such as new technologies to use scarce water resources more efficiently, or the building of new flood defenses.

Climate change mitigation and adaptation is a central part of the EU taxonomy for sustainable activities. The information on risk assessment of physical impacts is required for evaluating compliance with the EU Taxonomy Do No Significant Harm criteria on climate change adaptation. The EU taxonomy demands that an activity integrates physical and non-physical measures aimed at reducing all material risks that have been identified through a climate risk assessment. For existing activities, the implementation of those physical and non-physical measures may be phased and executed over a period of time of up to five years. For new activities, implementation of these measures must be met at the time of design and construction. (EU Technical Expert Group, Taxonomy Report, Technical Annex).

Performance Summary

Question Level Company Performance	44
Question Weight	3
Year-on-Year Change	16
Industry Average Score	29
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Adaptation: Anticipating the adverse effects of climate change and taking appropriate action to prevent or minimize the damage they can cause or taking advantage of opportunities that may arise.

Context-specific: Adaptation responds to physical climate risks that are mostly location and context-specific. Due to this nature, organizations can best assess climate-related risks and mitigate them based on a context-specific plan. For example, there are in principle several engineering and non-engineering options available to a coastal city to respond to the risk resulting from increased sea level. Responses will vary according to where the city is located, its size, the institutional and financial capacity of the city administration to deal with climate risk, the technical and engineering expertise available, the priority of the city, the perception of the citizens, and other factors. The adaptation responses will benefit the city that adopts them and possibly the systems that depend on or interact with the city.

A context-specific plan integrates physical and non-physical measures aimed at reducing - to the extent possible and on a best-effort basis - all material risks that have been identified through a climate risk assessment

(EU Technical Expert Group, Taxonomy Report, Technical Annex)

New operations: refers to assets planned, under construction or put in use after the current reporting cycle (i.e., after 2021 for the 2022 CSA).

Data Requirements

Additional credit will be granted for public disclosure of a context-specific or an overall plan to adapt to physical climate risks.

If your company has performed a climate risk assessment for physical risks and no material physical risks were identified, please select "Not applicable" to this question and provide a detailed explanation.

Questionnaire

Based on your climate risk assessment, has your company set up a plan to adapt to the identified physical climate risks? Please provide supporting evidence and indicate where this is available in the public domain.

1. ○ Yes, we have a **context-specific plan** to adapt to physical climate risks in existing and/or new operations. Please provide supporting evidence and indicate if this is available in the public domain.
    1. ☐ We publicly report on our context-specific plan to adapt to physical risks
    1. ☐ The risk assessment and plan to adapt to physical climate risks cover the following share of our **existing operations** (Percentage of total revenues):

       The plan includes a target to implement relevant adaptation measures within the following timeline for existing operations:
        1. ○ Less than 5 years
        2. ○ 5 to 10 years
        3. ○ More than 10 years
    1. ○ The risk assessment and plan to adapt to physical climate risks cover the following share of our **new operations** (Percentage of new operations):
    2. ○ We have no new asset planned.
2. ○ Yes, we have an **overall plan** to adapt to potential physical climate risks. Please provide supporting evidence and indicate if this is available in the public domain.
    1. ☐ We publicly report on overall plan to adapt to physical risks

   The plan includes a target to implement relevant adaptation measures within the following timeline:
    1. ○ Less than 5 years
    2. ○ 5 to 10 years
    3. ○ More than 10 years
3. ○ No, we have no existing plan to adapt to physical climate risks.
4. ○ Not applicable. We have performed a climate risk assessment for physical risks, but do not consider our company's assets and operations to be exposed to any material physical risks. Please provide a detailed explanation in the comment box below.
5. ○ Not known
