Waste Management Programs

Question

Does the company have programs on waste management?

Rationale

This question aims to understand how companies are taking steps towards the responsible management of waste within their operations. Adopting waste reduction programs is critical in improving operational performance and reducing environmental and social impacts. Ideally, businesses should look to close the loop by reusing, recycling, recovering and diverting waste, preventing it from entering the landfill and seeking new advantageous business opportunities. Companies benefit from investing in resources and programs that address waste through decreased costs, reduced risks, improved reputation, etc.

Performance Summary	
Question Level Company Performance	90
Question Weight	30
Year-on-Year Change	0
Industry Average Score	27
Industry Highest Score	95

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Operations: Includes any business activity within a company's direct control and may include activities such as production, extraction, manufacturing, management, etc. This also refers to companies operating solely in office buildings.

Waste audits: Also called waste assessments, the process of identifying the amount and type of waste being generated in a company's operations. This allows the company to determine areas of significant generation and identify opportunities for improving energy performance. This might include record examinations, facility walk-throughs, waste sorting, etc.

Actions to reduce waste generation: Specific measures focused on reducing waste generation in areas of significant concern. Focus points are usually identified through a waste audit, and as a result, actions are implemented to minimize waste.

Quantified targets: Objectives with specific, measurable and quantifiable waste performance improvement targets (e.g., reduce waste generated by 15% by 2030, reduce the waste sent to landfill by 5% by the end of the year). These targets should be time-bound and include a target year.

Investments in innovation or R&D resources to minimize waste: This aspect seeks to understand if a company has allocated monetary, workforce or other resources to investigate new ideas or technology aimed at minimizing waste generation from business operations. This might include sharing which waste-specific projects its research and development team is working on or the creation of working groups or other initiatives to address waste reduction.

Waste minimization training: Training provided to employees to raise awareness and better understand the benefits of reducing waste across operations.

Integration of recycling programs to reduce the waste sent to landfill: Please share what measures have been incorporated that demonstrate the reprocessing of materials to be used elsewhere in operations.

Waste diversion from landfill: Waste diversion is a practice focused on eliminating the operational waste sent to the landfill. Diverted materials are reduced, recycled, reused, composted and/or recovered for productive use. There is also a heavy emphasis on restructuring operations to eliminate waste from conception and redesign methods of operating.

Waste diversion from landfill certification: Companies validate waste diversion claims by certifying operations and some certify as "zero waste to landfill." This typically happens on a facility or project-level basis. Certifications may have different levels of recognition within them (gold, silver, bronze); however, they require operations to prove an 85% or higher diversion rate. We do not expect all operations to be certified. This may include, but is not limited to, certifications such as the TRUE Zero Waste Certification (Green Business Certification Inc), NSF Landfill-Free Verification, UL Solutions 2799A, Eurofins Zero Waste to Landfill Certificate and GreenCircle Certified Waste Diversion from Landfill Certification.

Diversion rate: This is the level at which a company has managed to recover waste otherwise destined for a landfill. This is typically achieved through reuse, recycling, composting and minimal amounts through energy production via incineration. An organization's diversion rate is calculated by adding the weight of all waste diverted from landfill and dividing it by the total amount of waste diverted plus what is sent to landfill. Calculation: weight of diverted waste / (weight of diverted waste + weight of waste set to landfill) x 100 = diversion rate

Disclosure Requirements

This question requires supporting evidence from the public domain. The information provided has to be included in your public reporting (e.g., annual report, sustainability report, integrated report, company publications) or corporate website.

Any response that cannot be verified in the attached public document(s) will not be accepted.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Public availability of company's waste management programs	Applicable
The company has a waste management program that involves auditing its operations to identify areas for waste minimization	YES
The company has a waste management program focusing on generating action plans aimed at minimizing waste	YES
The company has a waste management program that includes setting quantifiable and measurable targets to minimize waste	YES
The company's waste management programs include investment in innovation or R&D to minimize waste	YES
The company's waste management programs include training for employees to help identify and address waste challenges	YES
The company has a waste management program that integrates recycling to reduce the total waste to landfill	YES
Part of the company's waste management program includes certification by an independent accredited body	-

Questionnaire

Does the company have waste management programs and are they available publicly?

1. ☉

   Yes, the company has waste management programs that cover the following elements. Please indicate where this information is available in **public reporting or corporate website.**

   1. ☑ Waste audits to identify opportunities for improving waste performance
   2. ☑ Action plans to reduce waste generation
   3. ☑ Quantified targets to minimize waste
   4. ☑ Investment in innovation or R&D to minimize waste
   5. ☑ Waste reduction training provided to employees
   6. ☑ Integration of recycling programs to reduce the waste sent to landfill
   7. ☐

Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

Waste diversion from landfill is certified by an independent accredited body

2. ○

No, the company does not publicly report on waste management programs.

3. ○

Not applicable. Please provide explanations in the comment box below.
