Question: Exposure to Water Stressed Areas
Include Modeled Scores : Yes

Exposure to Water Stressed Areas

Question

Does the company systematically track and map its plant water usage with a comprehensive water tool taking into account local water stress?

Rationale

The rationale for the following questions is twofold: (i) determining the exposure of the organization to water-related risks and (ii) determining if the organization has a system in place enabling awareness of its own exposure to water-related risks. We expect the company to use a generally accepted water risk tool or provide similar evidence that water risk mapping has been done on a local / plant-level detail.

In order to ensure that the data we collect is as accurate as possible, leveraging the CSA as a powerful engagement tool with companies, we are presenting each company with an estimation of their total assets and their assets exposed to extreme water stress. This breakdown has been done based on publicly available sources from last FY. The exposure calculation is based on the WRI methodology and includes sites in “arid regions” and those exposed to “high” or “extremely high”. We are providing companies with the opportunity to review and correct these assumptions within the CSA. So far, companies have been asked to do this as part of the annual Trucost data review. The corrected data will be reviewed by S&P Global analysts and may be used in other questions throughout the CSA or by Trucost to refine and update models used in their analytical tools.

Performance Summary

No Data Available

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Water stress: “When withdrawals are greater than 20% of total renewable resources, water stress often is a limiting factor on development; withdrawals of 40% or more represents high stress. Similarly, water stress may be a problem if a country or region has less than 1,700 m3 yr-1 of water per capita (Falkenmark and Lindh, 1976).” Source: IPCC Report 2001

Other acceptable definitions of water-stressed areas include:

- "High Risk" or "Extremely High Risk" areas, as mapped by WRI's Aqueduct Global Water Tool
- "High Risk" or "Extremely High Risk" areas, as mapped by Water Footprint Network
- "High Risk" or "Very High Risk" areas, as mapped by WWF Water Risk Filter
- Environmental Flow smaller than 40%, as mapped by UN FAO

Data Requirements

Supporting evidence:

- The document(s) you attached will be used to verify the qualitative part of your response. If a question text field is available, a comprehensive answer in that field can be accepted instead of a supporting document. Any qualitative response that cannot be verified in the attached document(s) or via the information provided in the related question text field (if available) will not be accepted.
- Quantitative figures provided in the response do not need supporting evidence. You may still provide a reference using the reference clip. This could include examples of the underlying calculations or approaches to data aggregation used to compile the provided quantitative information.
- The supporting documents do not need to be available in the public domain.

Standards & Frameworks

CSRD - E3-2 19 AR 19-AR 21, E3-4 28e

GISD - Water stress

IRIS+ - OI3637

UNGC Questionnaire - G6

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Company's Exposure to Water Stressed Areas	Applicable
Percentage of production plants in last fiscal year located in water-stressed areas	39
Percentage of COGS in last fiscal year stemming from production located in water-stressed areas	0
Mapping is in line with S&P key definition	YES
Nr of exposed production plants in last FY	84.000
Total No of production plants in last FY	217.000

Questionnaire

When considering physical water scarcity issues at a local level, please indicate what number of your company's production plants/sites are located in water-stressed areas and what percentage of cost of goods sold (COGS) these amounted to in the last fiscal year. If COGS is not a relevant metric for your company, please leave that information blank.

1. ●

   Yes, we systematically track and map our plant water usage with a comprehensive water tool taking into account local water stress. Please review and, if necessary, update or complete the table on your company's number of sites located in water-stressed areas. Information has been pre-filled using the physical risk mapping from Trucost (FY -2), an S&P Global company, and has been derived from public sources. If necessary, please update the figures for the last FY and provide relevant references outlining the underlying methodology or mapping tool and the results for each of your assets

   1. ☑

      Mapping is in line with S&P key definition

   No. of production plants in last FY in water-stressed areas (e.g. <1700 m3/(person*year)): 84

   Total No of production plants in last FY: 217

   % of production plants in last FY in water-stressed areas (e.g. <1700 m3/(person*year)): 39

   % of Cost of goods sold (COGS) in last FY (if applicable): 0

2. ○

   No, we do not systematically track and map our plant water usage at a local level.

3. ○

   Not applicable. According to our assessment and the above definition of water-stressed area, we currently have no productions plants/sites located in water-stressed areas. Please provide explanations in the comment box below.

4. ○

   Not known
