Customer Satisfaction Measurement

Question

Does the company monitor and set quantitative targets to improve satisfaction and are targets and results communicated externally?

Rationale

Research from Harvard Business School has shown that a 5% increase in retention can result in a bottom-line profit increase of up to 75%, depending on the industry. The dramatic economic power of customer retention is revealed when viewing customers in terms of lifetime value (LTV). The value of retaining customers makes perfect business sense when one considers that a consumer retained for life is more cost-effective, requires less service, provides more business, and contributes to new customer acquisition by offering positive referrals. Companies in consumer-facing industries (B2C) should therefore monitor customer satisfaction and report the results of satisfaction surveys targeting consumers (i.e., end users) of their products/services.

Performance Summary	
Question Level Company Performance	90
Question Weight	54
Year-on-Year Change	80
Industry Average Score	37
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Customer or client: Buyer of services or goods from someone else. In the context of this questionnaire, we focus on customers/clients for B2B companies.

Consumer: User of a certain product or commodity. In the field of economics, a consumer can either be a single person or an entire organization using a certain type of service. In the context of this questionnaire, we focus on consumers for B2C companies.

Data Requirements

- B2C companies should report the results of satisfaction surveys targeting consumers of their products/services (i.e., end users of the products/services instead of the distributor/retailers they sell their products through).
- B2B companies should report the results of satisfaction surveys for their customers or clients (direct buyers of their products or services)

In case your company is active in different businesses involving B2C activities (consumers) and B2B (customers), please report the information corresponding to the business that represents the highest share of your total revenue.

Unit: % of satisfied customers out of the total number of customers responding to the survey

The percentage should be calculated as follows:

Number of satisfied customers / Total number of customers responding to the survey

Data Coverage: % of customers surveyed (both respondents and non-respondents) out of total customers

The data coverage should be calculated as follows:

Number of customers surveyed (both respondents and non-respondents) / Total number of customers

Companies may report full coverage if a statistically significant, representative sample of its customer base has been surveyed.

Target: We require the absolute target for the most recent reporting year. If your company has a multiple-year and/or relative target, please extrapolate what the target value would have to be for the last financial year to make sure you are progressing well towards achieving the target by the end of the target period.

Bi-annual satisfaction surveys: If your company only conducts a customer satisfaction survey every two years, then please copy the results from the previous year (when you did conduct a survey) into the box for the following year (when you did not conduct one). For example, if you conducted a survey in 2015 but not in 2016, copy the results from the 2015 survey in the 2016 box, to fill the entire table and make it possible to calculate a trend (FY-2 – FY0).

Disclosure requirements for partially public question. Additional credit will be granted for relevant publicly available evidence covering the following aspect of this question:

- Percentage of satisfied clients in the last reported year (measured through a satisfaction survey or through an alternative approach)

Guidance for utilities (ELC, MUW, GAS)

In the case of a company that has only exposure to electricity transmission and/or distribution, we expect to use this question to gather information about the satisfaction of the clients using the services provided by the company regardless of the income model. For instance, we intend to capture information about the satisfaction of generators and/or consumers and/or distributors requesting connection access to the infrastructure, generators, and consumers participating in markets operated by the company, participants in the network planning process if it is coordinated by the infrastructure operator, etc.

Guidance for Real Estate Management & Development and Equity REIT

If in the "Denominator – Area" question, business activity "Management of Standing Investments" is chosen, we expect companies to choose "tenants" in the dropdown list for data coverage. If this activity is not chosen, i.e., only the activities "Development of new construction and/or major renovation projects" and/or "Services" are selected, we expect companies to report on "customers".

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Company's Customer Satisfaction Measurement	Satisfaction measured as percentage of all clients
Company publicly reports customer satisfaction data	-
Satisfaction value calculated as per the methodology (2020)	53
Satisfaction value calculated as per the methodology (2021)	70
Satisfaction value calculated as per the methodology (2022)	Not answered
Satisfaction value calculated as per the methodology (2023)	89
Target percentage of satisfied clients set for last fiscal year	85
Coverage of customer satisfaction measurement (2020)	75
Coverage of customer satisfaction measurement (2021)	75
Coverage of customer satisfaction measurement (2022)	Not answered
Coverage of customer satisfaction measurement (2023)	80
If the document attached by the company contains relevant information on customer satisfaction measurement	YES
This aspect refers to the unit of satisfaction data used in measuring customer satisfaction.	Percentage of satisfied customers/tenants
Information on % of customers, operations, revenues and tenants covered to measure customer satisfaction	Customers

Questionnaire

Does your company monitor and set quantitative targets to improve satisfaction and are targets and results communicated externally? Please attach documents and indicate the coverage for the data provided. Please refer to the information button for additional clarifications. For each row in the table, it is mandatory that the values provided are in the same unit.

1. (●) Yes, we measure customer satisfaction using relevant unit of measurement. Please attach supporting evidence.
   1. [x] Document Satisfactory:

Satisfaction Measurement	Unit (Please select the unit of measurement)	FY 2020	FY 2021	FY 2022	FY 2023	What was your target for FY 2023?
Satisfaction Measurement:	Satisfaction measurement methodology: Percentage of satisfied customers/tenants	53	70	Not answered	89	85
Data coverage:	percentage of Customers	75	75	Not answered	80	

   1. [ ] Information is available in the public domain
2. ( ) Satisfaction is not monitored.
3. ( ) Not applicable. Please provide explanations in the comment box below.
4. ( ) Not known
