Question: Water Risk Management Programs
Include Modeled Scores : Yes

Water Risk Management Programs

Question

Does the company have programs on water risk management?

Rationale

As water becomes an increasingly scarce resource, risks related to the quality and quantity of available water have grown in importance for companies' operations. In this question, we assess how companies manage quantity and quality-related water risks and dependencies that are relevant to their operations.

Furthermore, potential regulatory changes, changes in price structure (e.g., water tariffs, withdrawal restrictions, etc.) and impacts on local stakeholders may increase risks to companies' operations. With this question, we assess how companies manage these risks and dependencies.

Performance Summary	
Question Level Company Performance	40
Question Weight	10
Year-on-Year Change	0
Industry Average Score	36
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Dependency-related water risks considered in risk assessment (upstream): Risks derived or caused by water issues like water availability or water quality (e.g., (sufficient water qualities or quantities for a company's operations, water abstraction licenses, clean water and sanitation for staff (WASH))

Impact-related water risks considered in risk assessment (downstream): Risks that might cause impacts on water masses or downstream users (e.g., lack of drinking water in local communities, pollution affecting the water quality of the surrounding rivers

Product use phase: Downstream water risks related to the product use phase (e.g., products contaminating water or using water inefficiently).

Data Requirements

For companies with exposure to water-stressed areas: Indicate policies or risk management measures that apply to the majority of the plants/sites located in water-stressed areas.

For companies with NO exposure to water-stressed areas: This question needs to be answered by all companies as it also assesses preparedness for future changes in conditions (both in terms of company structure and geographical conditions). Please indicate any policies or risk management measures that have been implemented at a corporate level relating to water stress or water-related risks.

For all companies: Companies must select at least one of the following options to be able to select any of the four risk aspects:

- **Dependency-related water risks considered in risk assessment.**
- **Impact-related water risks considered in risk assessment.**

Companies that do not operate their own production sites, such as **pure Royalty companies**, should mark this question as **"Not applicable".**

ELC and MUW:

- Criterion should be marked "Not applicable" for companies that are only into transmission/distribution business as they do not require water as an input to run their operations.
- Criterion should be marked "Not applicable" for companies that are producing 100% solar and/or wind energy.
- Question should be marked "Not applicable" for utilities generating more than 50% of their revenues from drinking water supply, distribution or wastewater treatment.

Disclosure Requirements

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Company's water risk management program for the majority of production plants/sites located in water-stressed areas	Applicable
Company manages water-related risks by tracking and monitoring estimates of future potential regulatory changes on a local level	-
Company uses estimates of future changes in water availability on a local level to manage risks concerning the available quantity and quality of water	YES
Company conducts potential impact-related water risks assessment concerning the available quantity and quality of water	YES
Company's water-related risk assessment includes the dependency on water availability, sufficient water qualities or quantities	-
Assessments of future water quality at/ around its operational sites (either related to quality required for operations or related to wastewater quality and potential impacts downstream).	YES
Company's water risk management measures include assessment of impacts on local Stakeholders	-
Public reporting for Dependency-related water risks assessment	-
Public reporting for assessment of future water quantities available	-
Public reporting for assessment of impacts on local stakeholders	-
Public reporting for impact-related water risks considered in risk assessment	-
Public reporting for assessment of future water quality-related risks	-
Public reporting for assessment of future potential regulatory changes on a local level	-
The risk assessment covers own operations	YES
The risk assessment covers supply chain	YES
The risk assessment covers product use phase	-

Questionnaire

Does the company have a water risk management program in place? Please tick only if the statement is valid for the majority of the production plants/sites located in water-stressed areas and provide supporting evidence.

1. (●)

Yes, the company has water-related risk management measures in place. The water risk management measures include the following:

Dependency and/or impact-related risks considered	Public Reporting
1. ☐ Dependency-related water risks considered in risk assessment	1. ☐ Yes
1. ☑ Impact-related water risks considered in risk assessment	1. ☐ Yes

Aspect	
1. ☑ Assessment of future water quantities available	1. ☐ Yes

1. ☑ Assessment of future water quality-related risks	1. ☐ Yes
1. ☐ Assessment of impacts on local stakeholders	1. ☐ Yes
1. ☐ Assessment of future potential regulatory changes at a local level	1. ☐ Yes

Scope of Risk Assessment

The risk assessment covers:

1. ☑ Own operations
2. ☑ Supply chain
3. ☐ Product use phase

2. ○ No, the company does not have water risk management measures.

3. ○ Not applicable. Please provide explanations in the comment box below.

4. ○ Not known
