Supplier Assessment and Development

Question

Does the company have a process for supplier assessment and development?

Rationale

This question is to assess if companies have a systematic approach to evaluating suppliers and their subsequent development to meet company requirements. This should be with an overall goal of a shared mindset leading to improved and scalable impact in the supply chain. Companies not only outsource production, services and business processes but responsibilities, risks and opportunities as well. Outsourcing tends to increase a company's flexibility, but supply chain risks might become less apparent; new dependencies may arise; and the identification, monitoring and management of risks and opportunities in the supply chain may become more difficult. Supplier assessment and development measures to assess and improve individual suppliers' performance are usually implemented after the initial supplier screening, which aims to identify supplier risks through desk research.

This question is divided into two parts: what the supplier assessment process includes and what the supplier development process includes.

Performance Summary

Question Level Company Performance	75
Question Weight	20
Year-on-Year Change	0
Industry Average Score	33
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

Assessment process

Supplier assessment process: A process in which suppliers are evaluated to obtain information on their practices in order to measure and monitor their performance. The assessment process can be carried out in order to reduce costs, mitigate risks and drive improvement. The benefits of carrying out this process include increased performance visibility, aligning customer and supplier business practices, and risk mitigation.

Supplier desk assessments with systematic verification of evidence: This type of supplier assessment is realized by, or on behalf of, the purchasing company. It generally takes the form of a questionnaire, in which suppliers are requested to provide information and supporting evidence on their environmental, social and governance policies, practices, performance and public disclosures. This information is then reviewed, verified and analyzed, resulting in an appraisal of the supplier's ESG performance, possibly with a score. This is considered to be systematic verification because established specifications and requirements are met. Supplier desk assessments are more company-specific than supplier screenings (see question supplier screening) as they assess the information provided by the supplier and are usually realized in a subsequent stage of the supplier assessment process. Desk assessments do not include onsite assessments of the supplier. Purchasing companies can implement their own supplier desk assessment tools or can use tools of external providers, such as Responsible Business Alliance risk-based Self-Assessment Questionnaire, EcoVadis, Together for Sustainability, Achilles, Higg Facility Environmental Module (with remote verification), etc.

2nd party supplier onsite assessments: These are carried out by employees of the purchasing company or contracted consultants. These auditors do not need to be approved or accredited by the standard-setting organization or an accreditation body.

3rd party supplier onsite assessments: These are carried out by independent third party auditing organizations that are approved/accredited by the standard-setting organization (e.g., amfori BSCI, Responsible Business Alliance, Higg Facility Environmental Module) or by an accreditation body along the requirements of ISO/IEC 17021 Conformity assessment — Requirements for bodies providing audit and certification of management systems (e.g., SA8000, ISO standards).

Supplier on-site assessments are on-site supplier visits by an auditor to assess the supplier's ESG operations, policies, systems and performance, usually involving document and record reviews; site tours; and interviews with company representatives, employees and other stakeholders. Applied methodologies can consist of their own checklists or standards and methodologies of a recognized industry or a multi-stakeholder initiative. On-site assessments can also include virtual assessments or supplier employee surveys.

Supplier assessments (desk or onsite) are carried out using standards and methodologies of a recognized industry or multi-stakeholder initiative: Desk or on-site assessments that are carried out following standards and methodologies of a recognized industry or multi-stakeholder initiatives such as SMETA, Responsible Business Alliance, amfori BSCI, Responsible Minerals Initiative, SAI Platform or others.

Supplier corrective action plans: An important quality management tool for any business or supplier. A corrective action plan is a method of documenting non-compliance issues; identifying their root causes; and capturing measurable, achievable solutions and realistic deadlines.

Development process

Supplier information/training: Provides the supplier with information and/or training on the purchasing company's supplier ESG program. This can be accomplished through various mediums. The content can include specific inputs on one topic, inputs on multiple ESG topics and best practices or information on the company's assessment and development process.

Supplier access to ESG benchmarks: This involves suppliers being provided with access to information on how other suppliers are performing. This can include performance information on specific areas or case studies on how other suppliers achieved that level of performance.

Supplier support (remote/onsite) on implementation of corrective/improvement actions: The company provides guidance and support on the implementation of corrective and improvement actions. This can happen remotely or through supplier on-site visits.

In-depth technical support programs to build capacity and ESG performance in suppliers: Comprehensive capacity building programs to systematically improve supplier practices and performance on specific ESG topics (e.g., energy efficiency, chemical management, health & safety management, working hours reduction) through training, baseline assessments, collaborative system development and progress measurement. Capacity building is defined as the process of developing and strengthening the knowledge, skills, instincts, abilities, processes, and resources that organizations need to survive, adapt, and thrive in a fast-changing world. Such programs go beyond corrective action support and usually take six or more months to implement. These technical support programs are long-term and sustained over time with the aim of improving ESG performance rather than solely implementing action plans.

Data Requirements

If a company selects that yes, they have an assessment and/or development process but does not select any of the subsequent options then the answer will not be accepted.

We expect publicly available information for this question. It is possible that a company only publicly reports on its assessment process and not on the development process. Therefore, the company has the option to provide public reporting for one part and select that they do not carry out the other option.

Supporting evidence:

- The document(s) the company attaches will be used to verify the qualitative part of the response. Any qualitative response that cannot be verified in the attached document(s) or via the information provided in the related question text field (if available) will not be accepted.
- Supporting documents need to be available in the public domain.
- Information related to the assessment and development process can be in separate documents, for example, a responsible sourcing strategy and a sustainability report. Scattered information that does not clearly relate will not be accepted.

Not applicable – General rule

"Not applicable" for this question (beyond the industries detailed below) will only be accepted for special cases. In such cases, the company must credibly explain via a comprehensive company comment and/or public reporting that it does not purchase goods or services for the purposes below. To be granted "Not applicable", the company must state that it:

- Does not use goods or services in its production processes.
- Does not re-sell goods or services to its customers.
- Does not utilize goods or services as capital goods (e.g., machines/infrastructure) in its operations.

Industry-specific special cases:

REI – Equity Real Estate Investment Trust (REITs): Companies that have only marked "Management of Standing Investments" as the main activity of the business in question "0.1 Denominator Area" should answer "Not applicable" to this question.

REM – Real Estate Management & Development: Companies that have only marked "Services" as the main activity of the business in question "0.1 Denominator Area", should answer "Not applicable" to this question.

OIE - Energy Equipment & Services Industry: Services companies (consultancy or seismic surveying), should answer "Not applicable" to this question.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Disclosure that supplier desk assessments take place with systematic verification of evidence (2025)	YES
Supplier Assessment and Development: Selection List Type (2025)	Applicable
Disclosure that on on-site assessments carried out by purchasing company employees or contracted consultant (2nd party assessment)	-
Disclosure that on supplier on-site assessments are carried out by an independent accredited auditing body (3rd party assessment)	-
Disclosure that assessments (desk or onsite) are carried out using standards and methodologies of a recognized industry or multi-stakeholder initiative.	-
Disclosure that supplier corrective action or improvement plans are used as a means of assessment	YES
The company has a publicly available supplier assessment process in place or not.	Yes
The company has a publicly available supplier development process in place or not.	Yes
Supplier information/trainings on company's supplier ESG program, process and requirements	YES
Disclosure on supplier access to ESG benchmarks against peers	-
Disclosure on supplier support either remotely or onsite on implementation of corrective or improvement actions	YES
Disclosure on the provision of in-depth technical support programs to build capacity and ESG performance in suppliers	-

Questionnaire

Does the company have a process for supplier assessment and development?

1. ●

   Yes, the company has a supplier assessment and development process. Please indicate where this information is available in **public reporting or corporate website**.

   Supplier assessment

   1. ●

      Yes, the company has a publicly available supplier assessment process in place, which includes the following:

      Please provide public supporting evidence:

      1. ☑

         Supplier desk assessments with systematic verification of evidence

      2. ☐

         Supplier on-site assessments carried out by purchasing company employees or contracted consultant (2nd party assessment)

      3. ☐

         Supplier on-site assessments carried out by an independent accredited auditing body (3rd party assessment)

      4. ☐

         Supplier assessments (desk or on-site) are carried out using standards and methodologies of a recognized industry or multi-stakeholder initiative. Please provide name/description:

      5. ☑

         Supplier corrective action/improvement plans

   2. ○

      No, the company does not have a publicly available supplier assessment process in place.

   Supplier Development

   1. ●

      Yes, the company has a publicly available supplier development process in place which includes the following:

      Please provide public supporting evidence:

      1. ☑

         Supplier information/trainings on company's supplier ESG program, process and requirements

      2. ☐

         Supplier access to ESG benchmarks against peers

      3. ☑

         Supplier support (remote/on-site) on implementation of corrective/improvement actions

      4. ☐

         In-depth technical support programs to build capacity and ESG performance in suppliers

   2. ○

      No, the company does not have a publicly available supplier development process in place.

2. ○

   No, the company does not publicly report on its supplier assessment and development process.

3. ○

   Not applicable. Please provide an explanation in the comment box below.
