Human Capital Return on Investment

Question

Does the company publicly report the following information on a standard human capital return on investment metric, serving as a global measure of the return of the company's human capital programs?

Rationale

The human capital return on investment helps measure a company's profitability in relation to its total employee costs. It is derived by removing non-employee costs from overall operating costs and calculating the resulting operating profitability. This metric assesses economic value by looking at profitability in relation to human capital costs.

Performance Summary	
Question Level Company Performance	81
Question Weight	15
Year-on-Year Change	(5)
Industry Average Score	59
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Total revenue: This refers to the amount your company has received in revenues before any deductions are made.

Total operating expenses: This refers to the expenses your company incurs from its operations. This should be in line with accepted financial accounting and reporting standards including everything a company will have defined in its income statement.

Total employee-related expenses (salaries + benefits): This includes training and development programs, benefits and pensions and salaries and hiring, as it covers all costs directly related to employees.

Data Requirements

You can calculate your company's profitability prior to human capital costs by subtracting total operating expenses (b) less total employee-related expenses (c) from total revenue (a), your company's profitability prior to human capital costs is calculated. Dividing this figure by total employee-related expenses (c) will lead to the ratio that examines your company's level of profitability in relation to the total human capital expenses.

If the company is small because it outsources everything to contractors, then contractors may be considered as employees and the question will be applicable. Examples of these type of companies are:

- Companies which explicitly state that they do not have operational control over the portfolio companies.
- Companies where it is clear that the company is not involved in the operations of its investments.

Please note:

- If you have **25 or less FTEs** in the organization, then please mark the **entire criterion** as **"Not applicable"**.
- If you have **26-100 FTEs**, then also this questions will be marked as **"Not applicable"**.

Disclosure Requirements

Supporting evidence:

- This question requires supporting evidence from the public domain. The information provided has to be included in your public reporting (e.g., annual report, sustainability report, integrated report, company publications, separate fuel efficiency strategy document) or corporate website.
- Any response that cannot be verified in the attached public document(s) will not be accepted.
