Additional Disclosure

Year: Methodology Year: 2026
Question: Direct Greenhouse Gas Emissions (Scope 1)
Include Modeled Scores : Yes

Direct Greenhouse Gas Emissions (Scope 1)

Question

Does the company track its direct greenhouse gas emissions (Scope 1)?

Rationale

The question assesses the company's direct greenhouse gas (Scope 1) emissions and their overall trend. Emissions are a critical indicator of a company's impact on the climate. Increasingly, the disclosure of emissions is expected from investors, and growing regulatory pressure has led to the mandatory disclosure of certain emissions. By disclosing emissions, investors and stakeholders can ascertain a company's climate risks and identify trends in emissions reduction to benchmark against competitors

Performance Summary	
Question Level Company Performance	23
Question Weight	13
Year-on-Year Change	(54)
Industry Average Score	44
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

GHG Scope 1: Greenhouse gas emissions refer to the emissions of the six main GHGs that are covered by the Kyoto Protocol. These gases are outlined below. Each GHG contributes to global warming in different ways, depending on its radiative properties, its molecular weight and its lifespan in the atmosphere.

Greenhouse Gases covered by the Kyoto Protocol:

Carbon dioxide (CO2): Emitted mainly from the burning of fossil fuels, carbon dioxide accounted for about 86% of the UK's human-induced (anthropogenic) GHG emissions in 2003.

Methane (CH4): Emitted mainly from agriculture, waste disposal, leakage from the gas distribution system and coal mining, methane contributed to over 6% of UK anthropogenic GHG emissions in 2003.

Nitrous oxide (N2O): The main anthropogenic sources of nitrous oxide emissions are agriculture, transport, industrial processes and coal combustion. Nitrous oxide accounted for about 6% of UK GHG emissions in 2003.

Hydrofluorocarbons (HFCs), perfluorocarbons (PFCs) and sulfur hexafluoride (SF6): Collectively known as "F-gases", these are emitted mainly from air conditioning, refrigeration and industrial processes. Together, F-gases accounted for about 2% of UK anthropogenic GHG emissions in 2003.

Emissions from biologically sequestered carbon: In accordance with the Greenhouse Gas Protocol, emissions data for direct CO2 emissions from biologically sequestered carbon (e.g., CO2 from burning biomass/biofuels) must be reported separately from the Scopes.

Data Requirements

Please provide the company's total direct greenhouse gas emissions (DGHG Scope 1) for which its operations has a reliable and auditable data acquisition and aggregation system.

For each row in the table, it is mandatory that the values provided are in the same unit.

Specific Data Requirements for Greenhouse Gas Emissions:

- Greenhouse gas emissions should be reported as metric tonnes of CO2-equivalents.
- Data on greenhouse gas emissions should only include CO2 and all other greenhouse gas emissions.
- All greenhouse gas emissions emitted directly by the company should be reported.
- Greenhouse gas emissions of owned and/or managed fleet must be included.
- Greenhouse gas emissions due to commuting of employees should not be included.
- Greenhouse gas emissions of business travel other than by owned and/or operated fleet should not be included.

Third-party verification: For third-party verification, we expect that data in the most recent year reported has been third-party verified and that relevant documentation showing this verification is attached. Internal audits or verification will not be considered.

Please note: In case the company has **reported a value of zero** in the table, third-party verification or supporting evidence is required (e.g., comprehensive comment, internal documentation or public reporting) to substantiate the figure reported.

Data Consistency

- If the environmental performance data reported in the questionnaire does not correspond to the publicly reported figures, the corresponding option should be marked and the discrepancy should be explained. This option should not be indicated if the information is not publicly reported at all.
- If there is a temporary reduction in coverage due to a corporate action, the corresponding box should be marked and the reduction should be explained.
- If it is not possible to report the figures in absolute terms, the data should be reported in relative terms and the corresponding box should be ticked. Please note that information should always be reported in absolute terms, if possible, even if it deviates from public reporting.
- If GHG emissions are only reported and tracked as combined Scope 1 and Scope 2 emissions, the combined figures should be indicated in this question, the corresponding box should be ticked and the question, "EP – Indirect Greenhouse Gas Emissions (Scope 2)", should be marked as "The question is not applicable."

General Data Requirements

Environmental performance data should cover the activities of the entire company with the same consolidation as used in financial reporting and must refer to the financial year (e.g., Jan. 1 to Dec. 31 for both financial and environmental data) and be aligned with the figures reported in the Company Information section

Target: We require the absolute target for the most recent reporting year. If your company has a multiyear and/or relative target, please extrapolate what the target value would have to be for the last financial year to make sure you are progressing toward achieving the target by the end of the target period. If you report a combined Scope 1 and Scope 2 target, please extrapolate the share equivalent to the absolute Scope 1 emission for inclusion in the table.

As a consequence, environmental performance data should only cover the direct emissions/resource use, i.e., resource use/emissions caused by the company and its consolidated activities. Emissions and resource use of suppliers and customers should be excluded. In particular, the environmental data of group companies should abide by the following rules:

- Environmental data of companies that are consolidated proportionally must be considered to the proportion at which they are consolidated financially.
- Environmental data of companies that are fully consolidated must be fully considered, irrespective of the proportion to which they belong to the group.
- Environmental data should refer to the specific company structure of each particular year. There should be no pro forma backward consolidation of the current company structure.
- Environmental data of companies that are sold or no longer consolidated should be excluded from environmental data as of the reporting period in which the company has not been consolidated anymore.
- Environmental data of companies that have been bought should only be included as of the reporting period in which the company is consolidated financially for the first time.
- Where environmental data does not cover all consolidated activities of the company, the coverage should be indicated together with the environmental data that is known.
- Where a company has no emissions/resource use, "0" should be used.
- Where the reported environmental data deviates from these definitions, please explain how the data provided differs from the definitions.
- If a company publicly reports on long-term, but not annual, targets, an annual target has to be estimated based on internal target setting or linear distribution.
- The data must be provided in the unit indicated in the question. If the company is tracking the specific indicator in a different unit, the unit converter must be used to convert the data into the preferred unit.
- Please ensure that the "Company Information" section has been correctly filled and that the coverage in the table below is based on the same denominator.

Disclosure Requirements

Disclosure Requirements for Partially Public Question

Additional credit will be granted for relevant publicly available evidence covering the following aspect of this question:

- Direct greenhouse gas emissions (Scope 1) figure for at least the most recent reported year.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Reliable and auditable data for company's direct GHG emissions (Scope 1)	Applicable
Total direct GHG emissions (2022) (met. ton. CO2e)	1,127,129.000

Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

QUESTION LEVEL INPUT	COMPANY ANSWER
Total direct GHG emissions (2023) (met. ton. CO2e)	1,141,473.000
Total direct GHG emissions (2024) (met. ton. CO2e)	1,142,350.000
Total direct GHG emissions (2025) (met. ton. CO2e)	1,240,655.000
Direct GHG emissions (Scope 1) target for last fiscal year reported (met. ton. CO2e)	Not answered
Direct GHG emissions (Scope 1): Data Coverage (2022)	100
Direct GHG emissions (Scope 1): Data Coverage (2023)	100
Direct GHG emissions (Scope 1): Data Coverage (2024)	100
Direct GHG emissions (Scope 1): Data Coverage (2025)	100
Public reporting: Direct GHG emissions (Scope 1) data is publicly available	YES
Third party verification: Direct GHG emissions (Scope 1) verified by third party in the most recent fiscal year reported	-
Data consistency: Direct GHG emissions (Scope 1) data reported in the questionnaire differs from publicly available data	-
Data consistency: Temporary coverage reduction or target challenge in direct GHG emissions (Scope 1) data due to corporate actions	-
Data consistency: Direct GHG emissions (Scope 1) data is not reported in absolute terms and is normalized	-
Combined reporting of Scope 1 & Scope 2 GHG emissions	-

Questionnaire

Does the company track its direct greenhouse gas emissions (Scope 1)?

1. (●) Yes, the company tracks its Scope 1 emissions. Please indicate where this information is available.

Scope 1	Unit	FY 2022	FY 2023	FY 2024	FY 2025	Target for FY 2025
Total direct GHG emissions (Scope 1)	metric tonnes CO2 equivalents	1127129	1141473	1142350	1240655	Not answered
Coverage (as a percentage of denominator)	percentage of:	100	100	100	100	

   1. [x] The data is publicly available.
   2. [ ] The data has been third-party verified.
   3. [ ] The data is normalized.
   4. [ ] The data differs from its publicly reported figures. Please provide an explanation:
   5. [ ] The coverage is temporarily reduced due to corporate actions. Please provide an explanation:
   6. [ ] The company tracks Scope 1 and Scope 2 emissions on a consolidated basis.
2. ( ) No, the company does not track its Scope 1 emissions.
3. ( ) The question is not applicable to the company.
4. ( ) The information is not available.
