Energy Management Programs

Question

Does the company have programs on energy management?

Rationale

By integrating energy management programs into business practice, companies can establish a robust process to continually improve energy performance. Energy performance is a concept related to energy efficiency and use. By improving energy performance and associated energy costs, companies can improve their competitiveness. In addition, improving energy performance can lead to climate change mitigation goals by reducing greenhouse gas emissions.

The successful implementation of energy management programs supports a culture of energy performance improvement that requires a commitment from all levels of the organization, especially top management. This involves cultural changes within the entire organization.

This question assesses the set of actions that ensure a robust, credible and reliable energy management program aimed at reducing energy consumption within a company's own operations. Each option should relate to the business activities within a company's direct control and may include activities such as production, extraction, manufacturing, management, etc. It aims to provide a systematic, data-driven and facts-based process, focused on continually improving energy performance that can transform the way companies manage energy use and energy consumption.

Performance Summary	
Question Level Company Performance	68
Question Weight	50
Year-on-Year Change	10
Industry Average Score	48
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Energy audits: Process that analyzes energy efficiency and consumption based on data and evidence. This process allows firms to determine areas of significant energy use and identify opportunities for improving energy performance.

Quantified targets: Objectives with specific, measurable and quantifiable energy performance improvement targets to reduce the company's energy consumption (e.g., reduce electricity consumption by 3% by the end of the year, 2% plant efficiency improvement by the fourth quarter). Although emissions reduction targets result from energy efficiency measures, this question solely covers energy consumption reduction targets.

Actions to reduce the amount of energy used: Concrete and targeted actions focused on reducing energy consumption. These can include the modification or renovation of facilities (e.g., warehouses, factories, offices), equipment (e.g., engines, boilers), systems (e.g., lighting, steam, transport) and energy-using processes. They can also include qualitative objectives related to people energy behavior, cultural change or operation of the systems and equipment responsible for substantial energy consumption.

Evaluation of progress in reducing energy consumption: Comparison of performance before and after the implementation of action plans.

Clean energy: The type of energy that does not release pollutants into the air.

Green energy: Resources that come from natural sources, such as the sun. Renewable energies are both clean and green energy since they come from sources that are constantly being replenished, such as hydropower, wind power or solar energy. Although these measures do not necessarily represent an energy performance improvement, the consumption of renewable energy has positive environmental effects, hence off-site renewable energy is accepted.

Innovation or research and development to decrease energy consumption: Procedures that consider improvement opportunities, operational control and energy performance in the design of new, modified and renovated facilities, equipment, systems, and energy-using processes in the scope and boundaries of the company. These procedures also consider on-site renewable energy production and less-polluting types of energy options for new facilities, as well as improved technologies and techniques.

Energy efficiency training: Training focused on raising awareness within the company's personnel to optimize energy behavior and lead to a culture that aims to reduce energy consumption.

Data Requirements

This question assesses management programs, so every option acceptable should be in the context of the company's management measures and programs. No option should be accepted based on policy-related information.

For companies operating in the **Energy & Utilities** sectors – the question requires to check energy consumption/reduction in its own operations and not energy generation for further sale.

Please provide public evidence for measures and programs in which the company has already invested previously or are under development. Hence, future investments without detailed explanation should not be accepted.

Disclosure Requirements

This question requires supporting evidence from the public domain. The information provided has to be included in the public reporting (e.g., annual report, sustainability report, integrated report, company publications) or corporate website.

Any response that cannot be verified in the attached public document(s) will not be accepted.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Public availability of company's energy management programs	Applicable
The process of identification of energy types and to identify opportunities for improving energy performance.	-
Objectives with specific, measurable and quantifiable energy performance improvement targets for energy performance improvement	-
Actions with qualitative objectives related to energy behavior or cultural change	YES
Process to compare energy performance before and after the implementation of action plans and other actions.	YES
Renewable energy use (Clean & Green energy)	YES
Innovation Investments or R&D for energy performance	YES
Energy efficiency training provided to employees to raise awareness and reduce energy consumption.	YES

Questionnaire

Does the company have programs on energy management?

1. (●) Yes, the company has energy management programs that cover the following elements. Please indicate where this information is available in **public reporting or corporate website.**
   1. ☐ Energy audits to identify opportunities for improving energy performance
   2. ☐ Quantified targets to address energy savings
   3. ☑ Actions to reduce the amount of energy use
   4. ☑ Evaluation of progress in reducing energy consumption
   5. ☑ Use of clean or green energy
   6. ☑ Investments in innovation or research and development to decrease energy consumption
   7. ☑

Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

Energy efficiency training provided to employees to raise awareness of energy consumption reduction

2. ○

No, the company does not publicly report on programs for energy management.

3. ○

The question is not applicable to the company.
