Question: Materiality Metrics for Enterprise Value Creation
Include Modeled Scores : Yes

Materiality Metrics for Enterprise Value Creation

Question

Does the company have targets or metrics linked to the top three material issues and does it disclose the progress of these targets or metrics? Does the company link executive compensation with the targets or metrics involved?

Rationale

This question assesses the extent to which companies are disclosing their progress toward established targets or metrics linked to material issues. To ensure that the company is managing its performance in relation to the top material issues identified over the long term, this question asks for the targets/metrics the company uses to measure its performance over time and whether the company has linked its executive compensation to these issues.

Performance Summary	
Question Level Company Performance	100
Question Weight	25
Year-on-Year Change	40
Industry Average Score	24
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Data Requirements

1. Material Issue:

Our expectations:

- Companies have conducted a materiality analysis and identified the most important issues driving long-term performance.
- Companies clearly define the three most material economic, environmental, or social issues driving long-term value creation.
- The material issues should be the same as identified in question 1.3.2

Not acceptable:

- Purely financial metrics/issues (e.g., net profit, cash flow, earnings per share, product sales).
- Operational business metrics/issues (e.g., market expansion, efficient use of capital, operational excellence).
- General issues without a description of the specific sub-issues that might impact the company's performance (e.g., macroeconomic conditions, long-term shareholder value).

Please note: Companies that do not provide an acceptable material issue will not receive points for any of the questions related to that material issue.

2. Target/Metric:

Our expectations:

- The metric or target is linked to the material issue and should be publicly available.
- Both long-term (at least three years) and short-term targets are acceptable.
- The metric or target, and how they are used are clearly described.

Target set in the past year is acceptable if:

- The company's target is by necessity, ongoing- (such as zero fatalities). Please indicate the current year as the target year and provide an explanation in the company comment section.
- The current reporting year (e.g., 2021) corresponds to the target's finishing year.
- The company publishes its report biannually or the company's reporting does not match with CSA assessment cycle.

Not acceptable:

- Targets/metrics are not linked to the material issue.
- Vague targets or targets with progress that cannot be measured (e.g., ensure a good working environment, reduce workplace accidents).
- Targets set in the past year and are not valid anymore

3. Target Year:

Our expectations:

- The target year should be available in the public domain

Indicating the current reporting year as the target year is acceptable if:

- The company's target is by necessity, ongoing- (such as zero fatalities). Please indicate the current year as the target year and provide an explanation in the company comment section.

Indicating past reporting years as the target year is acceptable if:

- If the company's long-term target is by necessity, ongoing- (such as zero fatalities). Please indicate the current year as the target year and provide an explanation in the company comment section.
- The current reporting year (e.g., 2021) corresponds to the target's finishing year.
- If the company publishes its report biannually or the company's reporting does not match with CSA assessment cycle.

4. Executive Compensation:

Our expectations:

- The metric or target used for determining executive compensation is clearly defined and linked to the material issue. It should also be publicly available.
- Executive compensation is linked to the performance on the material issue, metric, or target (e.g., as part of an executive scorecard).
- There is a clear indication that the performance on the provided material issue, target, or metric is linked to the compensation of the executive management, and not only of the respective line managers.

Not acceptable:

- The executive compensation is linked to the company's general corporate social responsibility policy or environmental performance.
- The metric/target is used for determining management performance but there is no explanation of how performance is linked to executive compensation.
- The metric/target indirectly contributes to the company's general financial performance metrics (e.g., executive compensation is linked to earning before interest and tax, as improved operational eco-efficiency reduces operational costs and therefore increases EBIT).
