Supplier Screening

Question

Does the company conduct supplier screening to systematically identify significant suppliers?

Rationale

Companies outsource production, services and business processes as well as responsibilities, risks and opportunities. On the one hand, outsourcing generally tends to increase a company's flexibility. On the other hand, supply chain risks may become less apparent, new dependencies may arise, and the identification, monitoring, and management of risks and opportunities in the supply chain may become more difficult.

An important first step in supply chain management is trying to understand supply chain risks and dependencies from the environmental, social and governance perspective as well as business operations perspective. Once a company has identified its significant suppliers, it can focus monitoring and development efforts on those with the highest risk for negative impacts and the greatest business relevance (this aspect is examined in subsequent questions). This question assesses if companies have a systematic approach to screening suppliers to identify potential sustainability risks in their supply chain. Companies that can properly identify significant suppliers will also be better positioned to prioritize their risk management measures and proactively detect issues connected to suppliers' ESG performance.

Performance Summary	
Question Level Company Performance	0
Question Weight	18
Year-on-Year Change	0
Industry Average Score	17
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Supplier screening: Supplier screening is systematic desk research on suppliers' risk of having negative ESG impacts as well as their business relevance. It considers available data sources such as country, sector or commodity ESG risks, spending, business relevance, etc. Methodology development and screening processes can be conducted by the company itself or with the support of or through external specialists. Screening can be considered the initial step in identifying potential sustainability risks in the supply chain; it is followed by assessing suppliers. At this stage, the company is not likely to be engaging directly with a supplier to screen them.

Significant suppliers: Significant suppliers are those identified as being at high risk of having negative ESG impacts or of significant business relevance to the company, or a combination of both. The company's portfolio of significant suppliers should be the key audience for its supplier ESG assessment and development program. Critical suppliers identified are also accepted as significant suppliers, even though in most cases only business relevance, and not ESG risk, is considered when identifying critical suppliers.

Environmental aspects: The risk of negative impacts related to environmental topics, including greenhouse gas emissions, energy consumption, water consumption, resource efficiency, pollution, waste or biodiversity.

Social aspects: The risk of negative impacts related to social topics, including human rights and labor rights such as child labor, forced labor, discrimination, freedom of association, right to collective bargaining, working hours, remuneration, occupational health and safety and the rights of local communities.

Governance aspects: The risk of negative impacts related to governance topics, including corruption, bribery, conflicts of interest and anti-competitive practices.

Business relevance: Business relevance considerations, including share of spend/volume and substitutability.

Country-specific risk: Risk of negative ESG impacts related to a country's political, social, economic, environmental or regulatory situation.

Sector-specific risk: Risk of negative ESG impacts related to a sector's distinct characteristics regarding labor situation, energy consumption, resource intensity, emissions and pollution potential (e.g., manufacturing, service provision, agriculture).

Commodity-specific risk: Risk of negative environmental, social, and governance impacts related to a commodity's supply chain structure, labor situation, land-use and resource intensity, energy consumption, emissions, material toxicity and pollution potential (e.g., metals, fossil fuels, wood, soy, cotton)

Data Requirements

This question requires a risk screening to be carried out by the company or a third party; therefore a self-assessment conducted by suppliers, or generally using the EcoVadis platform, is not be acceptable as the EcoVadis assessment collects supplier policies practices and performance and qualifies as a supplier desk assessment with verification of evidence (see supplier assessment and development question). We will only accept the use of EcoVadis if it is specified that the risk maps or risk screening tools provided were used for this purpose (e.g., EcoVadis IQ Plus).

"The question is not applicable to the company" – General rule

"The question is not applicable to the company" (beyond the industries detailed below) will only be accepted for special cases. In such cases, the company must credibly explain via a comprehensive company comment and/or public reporting that it does not purchase goods or services for the purposes below. To be granted, the company must state that it:

- Does not use goods or services in its production processes.
- Does not re-sell goods or services to its customers.
- Does not utilize goods or services as capital goods (e.g., machines/infrastructure) in its operations.

Industry-specific special cases:

REI – Equity Real Estate Investment Trust (REITs): companies that have only marked "Management of Standing Investments" as the main activity of the business in question "0.1 Denominator Area" should answer "The question is not applicable to the company".

REM – Real Estate Management & Development: companies that have only marked "Services" as the main activity of the business in question "0.1 Denominator Area", should answer "The question is not applicable to the company".

OIE - Energy Equipment & Services Industry: Services companies (consultancy or seismic surveying), should answer "The question is not applicable to the company".

Disclosure Requirements

Supporting evidence:

This question requires public evidence. Please indicate where in your public reporting you report information about the selected options.

Questionnaire

Does the company conduct supplier screening to systematically identify significant suppliers?

1. ○ Yes, the company conducts supplier screening to identify significant suppliers. Please indicate where this information is available in **public reporting or corporate website.**

   Please indicate which of the following aspects are considered in the company's screening process for significant suppliers.

   1. ☐ Environmental
   2. ☐ Social
   3. ☐ Governance
   4. ☐ Business relevance

   Please indicate which of the following risks are considered in the company's screening process for significant suppliers.

   1. ☐ Country-specific risk
   2. ☐ Sector-specific risk
   3. ☐ Commodity-specific risk

2. ● No, the company does not publicly report on whether it conducts supplier screening to systematically identify significant supplier.
3. ○ The question is not applicable to the company.
