Emerging Risks

Question

Does the company report on long-term, emerging risks?

Rationale

It is important for investors to understand the long-term risks that companies face and companies' awareness of the impacts of these risks on their business and any mitigating actions that they may be taking in response to such risks - beyond the ongoing operational risks reported by most companies. In disclosing these risks to investors, companies show their ability to plan effectively for long-term risks. Reporting on long-term risks, their impacts on their business and the mitigating actions they are taking can improve investors' confidence in management's ability to plan effectively for long-term challenges and therefore may make the company a more attractive long-term investment.

Performance Summary	
Question Level Company Performance	0
Question Weight	12
Year-on-Year Change	0
Industry Average Score	4
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

Emerging risks: The focus should lie on the most significant emerging risks that are expected to have a long term impact on the company and that are explained in public disclosures. Risks that are considered to be acceptable here include any newly identified risks that are expected to have a long-term impact on the company's business, although in some cases they may have already begun impacting the company's business today.

Impact on the business: It is not expected that a precise financial impact of these risks on the business can already be calculated or estimated, but rather a convincing description of how these emerging risks could impact the business, and require the company to adapt its strategy and / or business model.

Risk categories: The risk categories available in the dropdown menu are aligned with the categories defined in the World Economic Forum – Global Risk Report. The categories are: Economic, Environmental, Geopolitical, Societal and Technological. While we acknowledge that that five categories above might not be exhaustive, the category "Other", should only be used for other external risk categories that are industry specific. Categories such as operational risk, compliance risk, reputational risk, competition risk or market risk are not acceptable.

Data Requirements

This question requires supporting evidence from the public domain. Because the disclosure of long-term emerging risks (beyond operational risks commonly reported by companies or required by regulators) is so important for long-term investors, the risks provided in this question should correspond to risks that are disclosed publicly (e.g. annual report, sustainability report, integrated report, company publications, corporate website, risk reports,...). Additional specifications related to the description of the risk, the business impact and mitigating actions not available in the public domain will not be considered.

An emerging risk needs to fulfil the six below requirements in order to be accepted:

- The risk is **new, emerging** or significantly increasing in importance.
- The potential impact of the risk is **long-term**, i.e. the risk is unlikely to have a significant impact on the company for at least three to five years, but potentially may have begun to have consequences for the company today.
- The potential impact of the risk is **significant**, i.e. it has the potential to affect a large part of the company's operations and may require the company to adapt its strategy and/or business model.
- The risk is an **external** risk, i.e. it arises from events outside the company that are beyond its influence or control. Sources of these risks include natural, geopolitical or macroeconomic factors, but exclude operational, reputational or market risks.
- The risk and its impact on the company are **specific**. For example, long-term risks like macroeconomic developments should be described in the context of the business environment that the company operates in (i.e. the specific regulations or laws that may be introduced) and the impact on the company should be specific (i.e. not simply the description of the overall impact on the industry).
- The risk and its impact are **publicly disclosed**.

The mitigating actions have to be reported together with the risk and its impact, as a response to the risk.

Questionnaire

Please indicate two important long-term (3-5 years+) emerging risks that your company identifies as having the most significant impact on the business in the future, and indicate any mitigating actions that your company has taken in light of these risks. For each risk, please provide supporting evidence from **your public reporting** for the description of the risk, the business impact and any mitigating actions, and select the category to which the risk belongs.
