Food Loss & Waste Commitment

Question

Does the company have a group-wide commitment to monitor and reduce its food loss and waste volumes and is it available publicly?

Rationale

Quantifying food loss &waste is an important foundation for reduction efforts that can deliver a diverse array of benefits—from reducing costs associated with over-purchase and disposal to avoiding greenhouse gas emissions, or supporting efforts to eliminate hunger. By following recognized standards, corporations are better equipped to understand why and where losses occur and therefore also how to take appropriate actions to minimize food loss & waste volumes. Furthermore, efforts to appropriately quantify food loss &waste need to be met by clear, time-bound targets and actions across the value chain.

Performance Summary	
Question Level Company Performance	65
Question Weight	70
Year-on-Year Change	10
Industry Average Score	14
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

Food: Any substance—whether processed, semi-processed, or raw—that is intended for human consumption. "Food" includes drink and any substance that has been used in the manufacture, preparation, or treatment of food. "Food" also includes material that has spoiled and is therefore no longer fit for human consumption. It does not include cosmetics, tobacco, or substances used only as drugs. It does not include processing agents used along the food supply chain, for example, water to clean or cook raw materials in factories or at home.

Inedible parts: Components associated with a food that is not intended to be consumed by humans. Examples of inedible parts associated with food could include bones, rinds, and pits/stones. Inedible parts do not include packaging. What is considered inedible varies among users, changes over time, and is influenced by a range of variables including culture, socio-economic factors, availability, price, technological advances, international trade, and geography, and is, therefore, to be included in food loss &waste quantifications.

Food loss: Losses that occur in the food supply chain up to but excluding, retail.Any food that is discarded, incinerated, or otherwise disposed of, and does not re-enter in any other productive utilization, such as feed or seed or other industrial uses. Losses that occur during storage, transportation, and processing, also of imported quantities, are therefore all included. Losses include the commodity as a whole with its non-edible parts

Food waste: Waste which occurs at retail and consumer level.Food may be wasted in many ways; such as fresh produce that deviates from what is considered optimal, for example in terms of shape, size, and color, is often removed from the supply chain during sorting operations. Similarly, foods that are close to, at, or beyond the "best-before" date are often discarded by retailers and consumers and large quantities of wholesome edible food are often unused or leftover and discarded eating establishments.

Food loss & waste: Refers to the total volume of food that has either been lost or wasted, regardless of lifecycle stage. Food loss and/or food waste may be reported separately, or be aggregated into a total volume. If a company is only exposed to one category (e.g. restaurants exposed to food waste only), reporting on the one category only is acceptable.

Measuring food loss & waste: Options may include: daily logs, mass balance, survey, proxy data, records, direct weighing, modeling, etc. Often, the options present a trade-off between accuracy and completeness on the one hand and the cost of conducting the quantification on the other. Hence, a company may have to use a range of methods that may be accepted if the method used is relevant to the goals, scope, and resources of the company.

Break-down of food loss & waste volumes by food category and/or lifecycle stage: Not a requirement of the FLW Standard, but companies may find it useful to do so in order to identify critical areas for improvement. Companies may also disaggregate results in other ways (e.g. by geography or organizational units).

Alternative uses of food loss & waste: Streams that are utilized for other processes that may have economic, environmental, or social benefits instead of being discarded without any value creation, since some level of food loss or waste might be inevitable. Therefore, it is essential that the current destination of food loss & waste volumes is tracked and that actions are taken to optimize the value created. Destinations and repurposing actions may include any of the below:

- **Recycling for energy production or industrial products:** consists of the conversion of food loss or waste material into industrial products, and may include examples such as packaging (e.g. bioplastic) materials, traditional materials (leather or feather), or any other products which do not enter the food chain. Using processes to convert the material into energy or biofuels might include processes such as biochemical, anaerobic digestion/co-digestion, controlled combustion, or biomaterial processing.
- **Recycling for land applications or animal feed:** Examples of land application may include: spreading, spraying, injecting, or incorporating organic material (e.g. harvestable crops left/tilled into the soil) onto or below the surface of the land to enhance soil quality. Diverting materials from the food chain (directly or after processing) to animals is also to be included in this category.
- **Food rescue:** May take place through formal programs or informal efforts (that may also be referred to as food recovery, redistribution, or donation). Collection may take place at any point along the food supply chain, such as at the farm (e.g. field gleaning), the food processing facility, or the food distribution outlet (e.g. supermarket, restaurant). Other destinations may include collection by a third-party.

If relevant destinations have not been listed, please provide information on your chosen destination in the company comment.

Reduction of total food loss & waste volumes in existing processes: Actions taken in order to deliver tangible total volume reductions of your food loss & waste volumes in the value chain may include programs that address pre-harvest/-slaughter losses, food storage, handling, manufacturing, inventory management, purchasing practices, employee engagement, revisiting shelf-life/sell-by date extensions, new product formulations, packaging innovations, new service solutions, etc.

Data Requirements

Companies that are not exposed to food products, or evaluate food loss & waste to be a non-material issue for the company (e.g. financial impact negligible), may mark "Not Applicable" if a detailed explanation is provided in the comment box.

Companies in the Food & Drug Retailing Industry that:

- only do drug retailing should mark this question as "Not Applicable" and provide an explanation in the comment box
- only sell durable goods should mark this question as "Not Applicable" and provide an explanation in the comment box
- have operational control over the production of products (e.g. own brand label products), should also include food losses.

Companies in the Casinos & Gaming industry (CNO) that are only into online gaming should mark "Not Applicable" and provide an explanation in the comment box.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Company's Food Loss & Waste Commitment	Applicable
Company has programs established to measure food loss and waste	-
Company has programs to reduce the total volume of food loss and waste	YES
Company has measurable and group-wide targets to reduce the total weight of food loss and waste	YES
Company has a breakdown of food loss and waste volumes by food category and/or life-cycle stage	-
Company has programs aimed at using food loss and waste for alternative uses	YES
Company has collaborations with up/downstream partners to reduce the amount of food loss and waste in the value chain	YES
Our targets to reduce the total weight of food loss & waste are time-bound	-
Planned year for full implementation of the targets to reduce the total weight of food loss & waste	Not answered

Questionnaire

Does your company have a strategy to address food loss & waste?

1. (●) Yes, we address aspects in our food loss & waste strategy

   Please indicate which group-wide commitment and associated programs you have in place to monitor and reduce your food loss & waste volumes and provide supporting evidence for each tick box:

   1. ☐ Programs established to measure food loss & waste
   2. ☑ Programs to reduce the total volume of food loss & waste
   3. ☑ Measurable group-wide targets to reduce the total weight of food loss & waste
      1. ☐ Our targets are time-bound. Planned year for full implementation of the targets: Not answered
   4. ☐ Break-down of food loss & waste volumes by food category and/or lifecycle stage
   5. ☑ Programs aimed at using food loss & waste for alternative uses
   6. ☑ Collaboration with up/downstream partners to reduce the amount of food loss & waste in the value chain

2. ○
   No, we do not address any of these aspects publicly in our food loss & waste strategy
3. ○
   Not applicable. Please provide explanations in the comment box below
4. ○
   Not known

Confidential additional comments

Use the text field below only in the following cases: (i) to describe significant changes in data or calculation methodology compared to last year's submission, (ii) to explain why a question is not applicable to your company's business model, (iii) to explain if your data deviates from the unit or format requested, or (iv) to provide supporting notes on translations of non-English references.
