GMO Exposure

Question

Considering the evolving landscape around GMOs, companies are expected to disclose their GMO-related business and improve the transparency on this topic so that investors can evaluate any potential GMO-related risk. In this question, we ask companies about their GMO exposure to determine if GMO issue is relevant for them.

Rationale

Considering the evolving landscape around GMOs, companies are expected to disclose their GMO-related business and improve the transparency on this topic so that investors can evaluate any potential GMO-related risk. In this question, we ask companies about their GMO exposure to determine if GMO issue is relevant for them.

Performance Summary

No Data Available

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definition

Genetically Modified Organisms (GMOs): Organisms (i.e. plants, animals or microorganisms) in which the genetic material (DNA) has been altered in a way that does not occur naturally by mating and/or natural recombination. The technology is often called "modern biotechnology" or "gene technology", sometimes also "recombinant DNA technology" or "genetic engineering". It allows selected individual genes to be transferred from one organism into another, also between nonrelated species. (Source: WHO)

Examples are genetically modified seeds, crops (cotton, corn, soybean, wheat, rice), plants (papaya, potato, tomato, canola, sugar beets), fish (salmon) etc.

Ingredients derived from GMOs: Ingredients which are derived from organisms whose genetic materials (DNA) has been modified in a way that does not occur naturally. Examples are corn flour from genetically modified corn, and cottonseed oil from genetically modified cotton.

Products that contain GMOs or ingredients derived from GMOs: Products which contain either organisms whose genetic material (DNA) has been modified or ingredients which are derived from organisms whose genetic materials (DNA) has been modified in a way that does not occur naturally. Examples are foods produced from genetically modified corn or using ingredients from genetically modified corn, and animal feed produced from genetically modified soybean or using ingredients from genetically modified soybean.

GMOs in the production process: It refers to using GMOs as tools to manufacture products and the final products are not GMOs or contain GMOs or ingredients derived from GMOs. For example, company uses genetically modified micro-organisms in the fermentation processes to produce large quantities of desired products while the products are not GMOs or contain GMOs or ingredients derived from GMOs.

Data Requirements

The scope of this question is any type of product that contains GM material greater than 0.9 percent, in line with EU GMO labelling requirements set out in Regulation (EC) No 1829/2003.

- Please note that this threshold is on product level: That means that we expect companies to check for all their products. If they have only a few or one product with GM material less than 0.9 percent then the company is considered as having no GMO exposure and they can mark "No, our company does not have any GMO exposure."

The following companies should mark this question as "Not Applicable" and provide a brief explanation in the comment box:

- BVG companies that only do bottling and do not source their own raw materials to produce their own products
- FDR companies that do not have private label (or own brand) products in retailing or distribution
- FDR companies classified under Drug Retail
- Commodities companies that only trade raw materials that cannot be genetically modified e.g. palm oil, rubber

The following companies that should not mark the question as "Not Applicable":

- BVG companies that produce their own products that contain GMOs or ingredients derived from GMOs
- FDR companies that have private label (or own brand) products that contain GMOs or ingredients derived from GMOs in retailing or distribution
- FOA companies that use animal feed with GMOs or ingredients derived from GMOs
- REX companies that use GMOs or ingredients derived from GMOs

Companies answering "No, our company does not have any GMO exposure" in the GMO Exposure question are still expected to answer the GMO Statement question and mark the GMO Revenues question as Not Applicable.

Supporting evidence:

- The document(s) you attached will be used to verify your response.
- The supporting documents do not need to be available in the public domain.

Questionnaire

Does your company have any GMO exposure?

Please note that the scope of this question is any type of product that contains GM material greater than 0.9 percent.

Please review the information button for further guidance on how to answer this question.

1. Yes, our company has some GMO exposure. Please select any that apply and provide supporting evidence.
    1. We grow or produce GMOs.
    1. We produce products that contain GMOs and/or ingredients derived from GMOs.
    1. We source raw materials which are GMOs and/or ingredients derived from GMOs.
    1. We use GMOs in the production process.
2. No, our company does not have any GMO exposure.
3. Not applicable. Please provide explanations in the comment box below.
4. Not known
