CFA RESEARCH CHALLENGE · GRUPO BIMBO (BIMBOA)

General ESG Report

Grupo Bimbo, S.A.B. de C.V. — environmental, social and governance evidence from the team wiki

---

English version

Date: 2026-10-17

Basis: compiled knowledge wiki only (public information, CFA Standard II(A))

Status: final version (v2) with declared limitations; the team decides which issues carry the thesis

Data tags: [sourced] · [guidance] · [assumption] · [calc] · [unverified]

Contents

1. Executive summary
2. ESG framework and materiality for a bakery and packaged-food company
   - 2.1 Company strategy and reporting basis
   - 2.2 Double materiality
   - 2.3 What an outside rater treats as material (S&P Global, 2026 weights)
3. Environmental
   - 3.1 Targets and latest status
   - 3.2 Greenhouse-gas emissions
   - 3.3 Energy and electricity
   - 3.4 Water
   - 3.5 Waste, packaging and circularity
   - 3.6 Agriculture, palm oil and deforestation
   - 3.7 Climate management quality and disclosure
   - 3.8 Sustainable financing
4. Social
   - 4.1 Workforce
   - 4.2 Health and safety
   - 4.3 Products, nutrition and food safety
   - 4.4 Supply chain, human rights and communities
   - 4.5 Data privacy and information security
5. Governance
   - 5.1 Control and ownership
   - 5.2 Board and committees
   - 5.3 ESG governance inside the company
   - 5.4 Executive pay and ESG
   - 5.5 Related parties
   - 5.6 Minority protection and takeover defences
   - 5.7 Governance scorecard (compiled rubric)
   - 5.8 Ethics, controversies and litigation
6. Ratings and scores
   - 6.1 LSEG (FY2024, exports dated 2026-10-10)
   - 6.2 S&P Global ESG Score (Capital IQ)
   - 6.3 Why LSEG and S&P disagree
   - 6.4 Company-reported recognitions
7. Link between ESG, value and risk
   - 7.1 Risk register (descriptive; probability and impact are not scored here)
   - 7.2 Sustainability-linked financing
   - 7.3 Is ESG priced anywhere?
   - 7.4 Proposal for team decision
8. Information gaps
9. Source key

Key Takeaways

CFA Research Challenge — team working document · English version Date: 2026-10-17 · **Basis:** compiled knowledge wiki (`wiki/`) only · **Status:** final version (v2) with declared limitations: the open gaps of section 8 are not closed and stay as stated limitations; descriptive evidence report, the team decides which issues carry the thesis

> **How to read this report.** Every number carries a data tag: `[sourced]` (filing or public source), `[guidance]` (management statement), `[assumption]` (judgement, with rationale), `[calc]` (computed from tagged numbers) or `[unverified]` (not yet tied to a source). Each claim names the wiki article it comes from (codes in section 9) and, where the wiki gives it, the original document and page. Public information only (CFA Standard II(A)). No data outside the wiki was used; gaps are listed in section 8 and explained in `BIMBOA_Consideraciones_y_Brechas_ESG` (in Spanish); the routes to close them are in `CapitalIQ_Input_ESG.md`.

---

1. Executive summary

The profile in one paragraph. Grupo Bimbo is a high-disclosure, programme-rich ESG company with a controlled-company governance structure and a climate target path that went the wrong way in 2025. Third parties rate it well on environment and social issues and weakly on governance. The one hard financial penalty attached to its ESG commitments so far is small.

Seven findings the evidence supports

1. **Ratings are high but depend on the agency.** LSEG scores FY2024 at **84.62 (A)**, combined **82.93 (A-)**, 12th of 416 food and tobacco companies `[sourced]` LSEG. S&P Global scores 2026 at **59/100**, about 30 points above the food-products average of 29 `[sourced]` CIQS. The scales differ and neither measures absolute quality (section 6).
2. **Governance is the weak pillar in every source.** LSEG governance pillar is A- (76.59), the lowest of its three pillars `[sourced]` LSEG. S&P Governance & Economic is 46 (2026), flat at 43-46 since 2022 and 46 vs 49 in 2013 `[sourced]` CIQH. Our scored checklist gives **31 of 64 (48%)** `[assumption]` GOVC.
3. **The decline in LSEG FY2024 is entirely governance.** The score fell 87.02 to 84.62; the "Management" category alone fell 11.78 points (board attendance undisclosed, fewer non-executives, sustainability-linked pay flag lost) `[sourced]` LSEG.
4. **Emissions rose in FY2025 and the 2019 baseline was lifted.** Preliminary Scope 1 is 1,240,655 t (+8.6% y/y) and Scope 3 is 11,764,297 t `[sourced]` LSEG. The 2019 baseline was recalculated upward (Scope 3 +42.4% `[calc]`). The 2025 Scope 3 target (−12.5%) is missed on either baseline, and against the original 2019 base that defines the bond KPI 2025 Scope 3 is **+46.7%** `[calc]`. SBTi certification of the targets is temporarily paused `[sourced]` ESGF.
5. **Scope 2 is largely solved; Scope 1 and 3 are not.** Renewable electricity is 99-100% in 2025, but only Scope 2 has moved; Scope 1 is flat to up since 2019 `[sourced]/[calc]` LSEG.
6. **The money at stake in ESG-linked debt is small.** Bimbo 23-2L carries a MXN 6 m penalty for the missed target; Bimbo 23L has a possible step-up of about MXN 30 m a year from November 2031 `[sourced]/[calc]` BOND. Total sustainability-linked certificates are MXN 15,000 m `[calc]` SFIN.
7. **Legal and ethics history is the clearest ESG-flavoured liability.** The Canada Bread price-fixing fine (CAD 50 m, 2023) is paid, but class actions remain open with no provision booked `[sourced]` RISK.

Proposal for team decision (not a conclusion). Of the many issues in this report, four look most likely to carry weight in the investment case: (a) credibility of the Scope 3 / SBTi path; (b) controlled-company governance and minority protection; (c) wheat and water exposure as the climate channel that reaches the P&L; (d) antitrust and ethics legacy. The closing question for the team is in section 7.4.

---

2. ESG framework and materiality for a bakery and packaged-food company

2.1 Company strategy and reporting basis

- Strategy "Alimentamos un mundo mejor" launched in 2021 with three pillars plus foundations: **Para Ti** (nutrition), **Para la Vida** (people and communities), **Para la Naturaleza** (zero waste, net-zero carbon, regenerative agriculture), and **Cimientos** (environmental standards, food safety, human rights and labour standards, sustainable sourcing) `[sourced]` ESGF; RA25 p.79.
- Memberships and commitments: UN Global Compact signatory since 2014; Race to Zero joined 2021; RE100 member since 2018 `[sourced]` ESGF; IC25 p.174, RA25 pp.75, 95.
- Reporting frameworks used in the FY2025 integrated report: CSRD/ESRS, GRI, ISSB S1/S2, SASB processed foods and the data requested via S&P Global for the Mexican Stock Exchange sustainability index `[sourced]` ESGF; IC25 p.174. Climate risk follows TCFD, being aligned to IFRS S2 `[sourced]` ESGF; IC25 p.158.
- Mexican rule: the CNBV rule of 2025-01-28 requires listed issuers to file IFRS S1/S2 sustainability reports, first for FY2025, with assurance from 2027 `[sourced]` CLIM.

2.2 Double materiality

- The 2025 double-materiality update (previous exercise 2022, repeated every three years) found **11 doubly material topics**, 5 impact-only, 2 financial-only and 4 emerging `[sourced]` ESGF; IC25 pp.146-147.
- Doubly material topics extracted: climate change, energy, water, nutrition and healthy living, biodiversity, corporate culture, talent management, product safety and quality, supplier management and local community development (the 11th item was lost in text extraction) `[sourced]` ESGF.
- The 2022 exercise had eight material topics: consumer experience; product safety and quality; responsible communication and labelling; innovation in healthy products; sustainable agriculture practices; energy efficiency and renewables; sustainable packaging and circular economy; climate adaptation and mitigation `[sourced]` ESGF; SFF p.11.

2.3 What an outside rater treats as material (S&P Global, 2026 weights)

Bimbo's score on the criteria that S&P weights most heavily. Industry averages are the 10-Oct-2026 refresh where available.

Criterion (2026 weight)	Bimbo 2026	Industry average	Reading
Climate Strategy (8%)	54	33	Above average but down from 81 in 2025
Human Capital Management (7%)	68	n/a	—
Water (6%)	80	35	Strong
Labor Practices (6%)	53	n/a	Down from 73 (2024)
Occupational Health & Safety (6%)	49	n/a	Improving from 29 (2024)
Supply Chain Management (6%)	38	19	Low in absolute terms
Corporate Governance (6%)	**32**	**43**	**Below industry; 52 in 2013**
Human Rights (5%)	71	n/a	Up from 5 in 2019-2020
Biodiversity (5%)	72	n/a	Up from 21 in 2021
Health & Nutrition (5%)	93	13	Strongest criterion
Packaging (4%)	91	25	Strong

Criterion (2026 weight)	Bimbo 2026	Industry average	Reading
Business Ethics (4%)	83	n/a	Stable 71-85 since 2020

[sourced] CIQH (criterion history, 2026 weights); CIQS (industry averages, 10-Oct refresh). Criteria are not like-for-like across years because S&P changed the framework in 2017, 2021, 2023, 2025 and 2026 [sourced] CIQH.

3. Environmental

3.1 Targets and latest status

Area	Target	Latest reported status	Source
Scope 1	−50% absolute vs 2019 by 2030 (SBTi-aligned)	2025 preliminary 1,240,655 t, **+1.4%** above recalculated 2019 base	[sourced]/[calc] LSEG
Scope 3	−12.5% by 2025, −17.5% by 2027, −28% by 2030 vs 2019	2025 preliminary 11,764,297 t: **target missed** under both baselines	[sourced]/[calc] LSEG; ESGF
Scope 2 / electricity	100% renewable electricity by 2025 (RE100)	100% (integrated report) vs **99%** (LSEG-filed annex, preliminary)	[sourced] ESGF; LSEG
Net zero	Scopes 1-2 by 2040; all scopes by 2050	SBTi certification temporarily suspended during 2025 re-baselining	[sourced] ESGF; IC25 p.101
Water	−20% consumption per tonne by 2030 vs 2019	−7% at end-2024; about **−2%** in 2025 (1.16 m^3 per tonne, preliminary)	[sourced]/[calc] ESGF; CQG
Treated-water reuse	100% of the 2020 treated base reused by 2025	100% in 2025 (Carbon Trust assured)	[sourced] ESGF; IC25 p.176
Packaging	100% circular-economy packaging by 2030	99% meets recyclability standards (2025)	[sourced] ESGF; RA25 pp.91-92
Regenerative agriculture	200,000 ha of wheat by 2030	More than 520,000 ha with at least two practices (2025)	[sourced] ESGF; RA25 pp.95-96
Food waste	−50% in own operations by 2025	Not reconciled: RA25 reports different metrics (7% prevented vs 2020; 5,500 t diverted)	[sourced] ESGF

The regenerative-agriculture figure exceeds the 2030 wheat target by a wide margin but the two numbers may not share a definition (the 520,000 ha covers practices on land, the target is stated for wheat) [assumption].

3.2 Greenhouse-gas emissions

Basis	Scope 1 (t CO2e)	Scope 2 market-based	Scope 3	Source
2019, original	1,102,372	331,900	8,021,824	[sourced] LSEG; PD p.27
2019, recalculated Dec-2025	1,224,042	412,250	11,423,977	[sourced] LSEG; PD p.27
2022	1,089,697	61,393	10,071,853	[sourced] LSEG (Climate MAP)
2023	1,141,473	36,575	8,843,978	[sourced] LSEG
2024	1,142,350	25,679	8,131,237	[sourced] LSEG
2025, preliminary (verification under way)	**1,240,655**	**43,967**	**11,764,297**	[sourced] LSEG; PD pp.27-28

What the table says (all `[calc]` from the tagged numbers):

- The 2019 baseline was recalculated at end-2025 because the plant count grew about 5% vs 2019, above the SBTi threshold. The base rose **+11.0%** (Scope 1), **+24.2%** (Scope 2) and **+42.4%** (Scope 3). The years 2020-2024 were **not** recalculated `[sourced]` LSEG; PD p.27.
- Scope 1 2025 is +1.4% above the recalculated base and +12.5% above the original base, against a −50% target by 2030. LSEG data give a 2019-2024 Scope 1 CAGR of **+0.78%** vs a **−6.11%** a year needed `[calc]`.
- Scope 3: the 2025 interim target implies 9,995,980 t on the recalculated base; actual 11,764,297 t is **17.7% above** it. Against the original base figure (7,019,096 t) the miss is 67.6% `[calc]`.
- The company states that its 2025 Scope 3 target for the Bimbo 23-2L bond was not met `[sourced]` SFIN; IC25 p.169.
- 2023-2024 values pre-date a 2025 methodology change that the company says affected 2024 and 2025 figures, so year-on-year moves from 2024 to 2025 mix methodology and performance `[sourced]` LSEG; GRI 2-4.
- Total scopes 1-3 in 2025 is 13,048,919 t, about equal to the recalculated 2019 base (−0.1%) and +38.0% above the original base `[calc]`.
- Intensity per tonne of product (TPP 5,378,788 t): Scope 1 0.23, Scope 3 2.19, scopes 1-3 2.43 `[sourced]` LSEG; PD p.28.

Scope 3 progress depends on the base (all `[calc]` from the tagged series):

Scope 3 vs 2019	vs original base (8,021,824 t)	vs recalculated base (11,423,977 t)
FY2023 (8,843,978 t)	+10.2%	−22.6%
FY2024 (8,131,237 t)	+1.4%	−28.8%
FY2025 (11,764,297 t, preliminary)	**+46.7%**	+3.0%

- The KPI of the two sustainability-linked bonds is absolute Scope 3 (all applicable categories) against the **original** 2019 base of 8,021,824 t, observed at 2025-12-31; the company says the target was not met and that verification is still in process. The verifier is not named, and whether the recalculated base will be used for the bond test is not stated `[sourced]` CQG (IAR25 pp.159, 168-169).
- A Capital IQ AI output earlier reported progress of −22% (2024) and −19% (Q3 2025). The −22% is close to FY2023 against the recalculated base (−22.6%), so it may mix an old-method year with a new-method base; the −19% cannot be reproduced `[unverified]` CLIM; CQG. Do not quote either figure without the KPI definition.
- The verified Scope 3 series for 2019-2022 (475,967; 457,930; 516,169; 540,588 t) covers **third-party vehicles only**; all categories are included from FY2023. The two series cannot be linked `[sourced]` CQG (IAR23 p.280; IAR22 p.243).
- FY2019 Scope 1 exists in three versions: 1,102,372 (company original, financing framework), 1,098,588 (LSEG) and 1,082,002 (IAR23, narrower boundary). The working series uses 1,102,372 and the recalculated 1,224,042 `[sourced]` CQG; the 1,082,002 boundary is `[unverified]`.

Scope 3 by category `[sourced]` CQG (IAR23 p.280; PD pp.26-28); shares are `[calc]`:

Category	FY2019 recalculated (t)	FY2023 (t)	FY2025 prelim. (t)	Share FY2025
Purchased goods and services	8,463,412	6,132,858	8,698,158	73.9%
Transport and distribution (Cat. 4)	966,006	535,477	1,163,906	9.9%
End-of-life of products sold	656,186	486,918	766,279	6.5%
Investments	459,211	530,565	378,122	3.2%
Other five categories	879,161	1,158,160	757,832	6.4%

Category	FY2019 recalculated (t)	FY2023 (t)	FY2025 prelim. (t)	Share FY2025
Total	**11,423,977**	**8,843,978**	**11,764,297**	

About 74% of Scope 3 is purchased goods and services (ingredients and packaging), so the Scope 3 target is mostly a supplier and agriculture target `[calc]`. There is no category split for FY2024.

3.3 Energy and electricity

- Renewable electricity: 92% (2023), 97% (2024), 100% (2025, third-party validated) in the integrated report; the 2025 figure uses PPAs, virtual PPAs, on-site generation and certificates (used in Korea, Ukraine, Venezuela) `[sourced]` ESGF; IC25 p.106. The LSEG-filed annex says **99%** with 1% offset by certificates and 43,967 t of residual Scope 2 `[sourced]` LSEG; PD p.27.
- LSEG's renewable **energy** use ratio (all energy, not electricity) is 22.02% in FY2024 (21.76% FY2023), and total energy per USD m revenue rose to 1,211.86 from 1,011.90 `[sourced]` LSEG. Do not mix "renewable electricity" with "renewable energy".
- Fleet and process: 4,546 electric and 8,065 alternative-fuel vehicles (IC25 p.103 table); more than 130,000 solar panels in nine countries; 100 MW virtual PPA in Texas; Repsol 12-year PPAs of about 150 GWh a year for 18 European plants (2026-07-30) `[sourced]` ESGF; CLIM; PRT.
- Process decarbonisation is at pilot stage: hybrid gas-electric ovens and hydrogen burners; hydrogen baking test in Portugal showed technical viability but cost and infrastructure are barriers `[sourced]` ESGF; RA25 p.94.
- Energy intensity of factories: electricity 301 kWh/t (2019) to 259 (2024); thermal 0.54 Gcal/t to 0.50 `[sourced]` CLIM (Capital IQ AI output, single run).

3.4 Water

- **101 sites** are in areas of high or extremely high water stress. They are work centers (bakeries, distribution centers and warehouses) assessed with the Aqueduct atlas (IAR24 p.149); the 89 of a second Capital IQ AI run is probably the manufacturing subset `[unverified]`. `[sourced]` LSEG; CQG.
- Water withdrawal in stressed regions: 57.32% (FY2024) `[sourced]` LSEG.
- Absolute withdrawal rose to 6.425 m (units as LSEG) in FY2024 from 5.580 m in FY2019, **+15.1%**, while per revenue it fell 9.4% `[calc]` LSEG. The company target (−20% per tonne by 2030) and its −7% progress use a different denominator, so the measures are not comparable `[sourced]` ESGF; LSEG.
- Intensity: 6,279,770 m^3 withdrawn in 2025 for 5,378,788 t of product = **1.16 m^3 per tonne** (preliminary). Against 2019 (about 1.19 m^3 per tonne), that is about **−1.9%** in 2025 and −7.4% in 2024, which reproduces the company's −7%; the target is −20% by 2030. Withdrawal fell 2.3% in 2025 while product tonnes fell 7.8% `[calc]` CQG; LSEG. LSEG's units are millions of m^3: its 5.910 m (FY2023) and 6.425 m (FY2024) equal the 5,910 ML and 6,425 ML of the integrated reports `[sourced]` CQG.
- Reuse is measured against the 2020 base (100% since FY2023) and the reused **volume** keeps rising (816.6 ML in 2025 vs 467.5 ML in 2019), but the share of treated water that is reused fell from 78% (2019) to 64% (2025) `[sourced]/[calc]` CQG (PD p.22).
- Water risk is rising in the filings: the FY2025 report adds a restriction on transferring concession titles (reform of 2025-12-11) and cites higher insurance cost for exposed sites `[sourced]` RISK; CLIM.

3.5 Waste, packaging and circularity

- Total waste: 633,624 t in FY2024 vs 406,865 t in FY2023 (**+55.7%** `[calc]`); recycling ratio 97.95%; hazardous waste 587 t `[sourced]` LSEG. LSEG flags waste targets TRUE for the first time in FY2024.
- 99% of packaging meets recyclability standards (2025) `[sourced]` ESGF; RA25 pp.91-92.
- The General Circular Economy Law (published 2026-01-19) creates extended producer responsibility; requirements are not yet published and management expects spending and possible product redesign

[sourced] RISK; RA25 p.39.

- 18 Mexican jurisdictions have environmental taxes and all states restrict single-use plastics [sourced] RISK; RA25 p.38.

3.6 Agriculture, palm oil and deforestation

Palm oil (direct)	Dec-2024	Jun-2025	Dec-2025	Jun-2026
Traceability to mill	~96%	96%	96%	**96%**
Traceability to plantation	42%	52%	52%	**69%**
Deforestation-free volume (satellite)	70%	75%	**85%**	**85%** (14% yellow, 1% red)

[sourced] LSEG (palm-oil progress reports in the LSEG filings library). Certified palm oil was 100% in FY2024 and FY2023 (80% FY2022) [sourced] LSEG. The 2025 deforestation-free target is **not met at 85%** if the target level is 100%; the target level is not restated in the filed reports [unverified] LSEG.

- Soy: suppliers covering 96% of soybean-oil volume traced; the US supplies 74% of soy; deforestation-free confirmation is limited by missing sub-national data [sourced] LSEG (Agriculture progress, Jun-2026).
- A 2023 investigative report (Gecko Project) linked a palm-oil supplier to deforestation; the company reported it met its 100% RSPO-certified volume commitment by end-2023 [sourced] RISK; RA23 p.51.
- Biodiversity: commitment TRUE since FY2022; risk assessment, due diligence and targets FALSE in LSEG FY2024; S&P biodiversity score rose to 72 (2026) [sourced] LSEG; CIQH.
- Regenerative practices reduced water use up to 10% (wheat) and 19% (corn) in Sinaloa, Sonora and Guanajuato [sourced] CLIM.

3.7 Climate management quality and disclosure

- TPI management quality level **3** in 2021-2024; board-level climate oversight Yes from 2023; capex-alignment answers regressed from Yes (2022-23) to **No (2024)** [sourced] LSEG.
- Three vendors disagree on internal carbon pricing (TPI: disclosed; LSEG: false; S&P CSA 2026: score 0) [sourced] LSEG.
- S&P Climate Strategy fell 81 to 54 in 2026 on scenario analysis (100 to 0), TCFD disclosure (100 to 25), internal carbon pricing (70 to 0) and Scope 1 (77 to 23) [sourced] CIQS; CIQH. Whether this is linked to the SBTi pause is not stated [unverified].
- CDP: climate "A" (2022 and 2023 performance) and water "B" (2025) [sourced] ESGF; CLIM.
- Capex: since 2025 a separate CapEx envelope funds sustainability activities (vehicles, ovens, water treatment, regenerative agriculture); the amount is not disclosed [sourced] ESGF; IC25 p.168. FY2026 total capex guidance is US$1.0-1.2 billion with no sustainability split [guidance] CQG. Internal carbon price and the cost of carbon allowances or Mexican ETS participation: not disclosed [sourced] CQG.
- SBTi: certification of the targets is temporarily suspended at the company's request while it re-baselines, because the plant count is about 5% above 2019, over the significance threshold; the original validation date and the exact suspension date are not stated [sourced] CQG (IAR25 p.100; PD p.26).

3.8 Sustainable financing

See section 7.2, where the instruments and their ESG pricing terms are laid out.

4. Social

4.1 Workforce

- Workers: 170,642 including contractors, 147,873 on payroll, in 39 countries (IC25 p.63); RA25 says "more than 153,000"; LSEG counts 170,046 (CSR scope) and 152,366 (reported headcount) for FY2024 `[sourced]` ESGF; LSEG. Definitions differ; do not mix them.
- Trade-union representation 62% (LSEG FY2024); the company reports 66% covered by collective agreements (GRI 2-30) `[sourced]` LSEG.
- Employee turnover 17.53% (FY2024) `[sourced]` LSEG. By region and age in FY2024 turnover is 10-28%, highest for staff under 30 (28% in Europe, Asia and Africa); the company gives no global rate `[sourced]` CQG.
- Payroll headcount for FY2024 is 151,161 (149,129 full time plus 2,032 part time); regions add to the total and women are 23.6%; by contract, 119,937 are permanent, 25,795 temporary (17.7% of those with a stated type) and 5,429 not specified `[sourced]/[calc]` CQG. The 192,094 shown for FY2023 counts everyone active during the year and is not comparable.
- Women: 24% of employees, 29.4% of managers, 0% of executive members (LSEG FY2024); 30.51% in leadership positions in 2025 against a 40% target by 2030 `[sourced]` LSEG; ESGF. S&P records 25.00% women in all management positions (a different definition) and now classes it "Lagging" `[sourced]` CIQH.
- Gender pay, FY2024 (seven largest countries, non-operating associates only): the ratio of women's to men's average pay is 0.98 for executives on base pay and 0.88 with cash incentives, 1.01 and 0.95 for managers, and 0.62 for non-administrative staff; by country, executives and directors in Mexico are 0.79, Brazil 0.78 and Chile 0.76 `[sourced]/[calc]` CQG (IAR24). The non-administrative gap reflects the country and role mix of the sample.
- Layoffs: 131 announced in FY2024 (0.08% of employees) `[sourced]` LSEG. The company closed 11 bakeries worldwide in FY2024 `[sourced]` PRT (citing the North America article).
- Mexican labour changes: 12 paid vacation days from 2023, the "Ley Silla" fully in force from 2025-12-15, and a presidential initiative of 2025-12-03 to cut the workweek to 40 hours, two hours a year from 2027-01-01 `[sourced]` RISK; RA25 p.48.
- Union relations: no known organising efforts, strike notices or collective claims at report date (RA25 p.47); one Teamsters contract ratified 2025-09-08 `[sourced]` RISK; PRT. A US voluntary-separation programme cut about 600 jobs in 2018 `[sourced]` PRT.
- Multi-employer pension plans in North America: cash contributions MXN 2,700 m (2025) and 2,406 m expected for 2026; recorded withdrawal liabilities fell from 2,033 (2023) to 985 (2025) `[sourced]` RISK; RA25 PDF p.306.

4.2 Health and safety

Year	2021	2022	2023	2024	2025
TRIR (company definition)	2.38	1.96	1.80	1.64	**1.59**
Employee fatalities	6 (LSEG)	4 (LSEG)	6	**5** (LSEG: 0)	n/a

`[sourced]` ESGF; IC25 pp.64, 75-76 (TRIR); LSEG (fatalities 2021-2022); CQG (fatalities 2023-2024). The target is below 1.00 by 2030 with about 5% a year improvement `[sourced]` ESGF. FY2025 TRIR excludes accidents at 2025 acquisitions during integration and relies on internal audit only `[sourced]` ESGF; IC25 p.76. At 5% a year from 1.59, the 2030 TRIR would be about 1.23, above target `[calc]`; reaching 1.00 needs about 8.9% a year `[calc]`.

The company's GRI 403-9 table (per 200,000 hours, retrieved through Capital IQ AI) shows an LTIFR of 1.34 (2,394 cases) and a lost-time injury rate of 1.44 for 2024, 3,126 recordable injuries in 2023 and 2,913 in 2024

(TRIR 1.63), and **5 work-related employee fatalities in 2024** (rate 0.0028; 6 in 2023), none from illness [sourced] CQG (IAR23 p.265; IAR24 p.278). LSEG shows **0** for FY2024; the company table is used and LSEG's value is treated as missing data. Contractor safety is not disclosed and there is no regional split. LSEG injury rate was 8.15 per million hours in FY2024 (11.90 in FY2021) and lost-time injury rate 7.2; S&P employee LTIFR is 1.42, 46-49% below the industry average [sourced] LSEG; CIQS. S&P Occupational Health & Safety is only 49 (2026) and contractor LTIFR scores 0 in every year 2020-2026 [sourced] CIQH. LSEG shows no board oversight of health and safety in FY2021-2024 [sourced] LSEG.

4.3 Products, nutrition and food safety

- 48% of sales come from products meeting the optimal nutritional standard (Health Star Rating of 3.5 or more); 98% of the daily-consumption portfolio offers positive nutrition (ATNi, 2026-05-13); 100% of daily-consumption products are free of artificial colours and 99% free of artificial flavours [sourced] ESGF; PRT. Target: 100% positive nutrition by 2030.
- Pledge to remove artificial colours from the whole portfolio by end-2026 (2025-07-29) and a BBU commitment on preservatives, colours and flavours for five brands by 2028 [sourced] PRT.
- Access to Nutrition Initiative: one of four leading companies globally; fourth in the 2024 index [sourced] ESGF.
- Regulation: Mexico's front-of-pack labelling phase 3 now starts 2028-01-01; school-food guidelines (mandatory from 2025-03-29) ban "seal" products in school meal preparation; advertising of sealed products needs health-authority permits [sourced] RISK; RA25 pp.29-31.
- Food safety: 95% of products are made in GFSI-certified plants; one recall in the whole press-release record (Little Bites, 2019-08-01) [sourced] LSEG; PRT. S&P Product Quality & Recall Management scores 54 (2026) and product recalls 30 [sourced] CIQH; SPH.

4.4 Supply chain, human rights and communities

- Policies in the LSEG library: Supplier Code of Conduct (child and forced labour), Global Agriculture Policy (child labour minimum age 15, or 14 where local law sets it), Palm Oil Policy (NDPE, RSPO), grievance mechanism (2024) [sourced] LSEG.
- S&P Human Rights rose from 5 (2019-2020) to **71** (2026) on mitigation and remediation (34 to 100), but the Human Rights Assessment question has scored 0 in all seven years 2020-2026 [sourced] CIQH.
- S&P Supply Chain Management is 38 (2026), above the industry average of 19 but down from 72 in 2021 [sourced] CIQH. S&P supplier-assessment KPIs fell from 40 to 5 in 2026 [sourced] CIQH.
- BEAR supplier programme: 300 suppliers in 2025 (200 the year before) [sourced] ESGF.
- Soy responsible-recruitment project at a sugar mill; child labour is the only social topic in the top nine material topics for agriculture [sourced] LSEG.
- Communities: more than 270 "Buen Vecino" projects in 2025; target at least one per work centre by 2030 [sourced] ESGF; IC25 p.12.

4.5 Data privacy and information security

- LSEG flags data-privacy and cyber-security policies TRUE [sourced] LSEG.
- S&P Information Security went 58 (2024), 0 (2025), 13 (2026), against an industry average of 19; the policy question scores 0 [sourced] CIQH. S&P Responsible AI scores 0 (industry 2) [sourced] CIQS.
- The annual report cites past exposure to malware and ransomware and the EU AI Act [sourced] RISK; RA25 pp.36-37.

---

5. Governance

5.1 Control and ownership

- Six holders own **72.03%** (Normaciel 40.96%, Promociones Monser 12.78%, Philae 5.41%, Grupo Valacci 5.15%, Banamex trustee 3.99%, Marlupag 3.75%) `[sourced]` GOV; RA25 pp.181-182. LSEG states 72.37% strategic holders and a free float of 27.63% `[sourced]` GOVC.
- The block did not trade: its share count is unchanged since 2023 (3,100,760,788); its percentage rose from 69.3% to 72.0% because repurchased shares were cancelled `[calc]` GOV.
- The company says Normaciel exercises significant influence and that the Executive Chairman, Daniel Servitje Montull, "could be considered to have command power" `[sourced]` GOV; RA25 p.182. Ultimate owners of the holding companies are not named in any source `[unverified]`.
- One share, one vote (Series A only); LSEG equal voting rights True `[sourced]` GOVC.
- The Capital IQ ownership module cannot confirm the 72%: it lists only institutions (largest BlackRock 2.42%; the 25 listed add up to about 5.2% `[calc]`) and no strategic or insider holders `[sourced]` CQG.
- A 3Q22 company deck states a control group of 81% and a float of 19%; every register since shows 72-73% `[sourced]` GOVC. The company has not reconciled the two. A Capital IQ AI answer suggests about 8.5 points of family and director holdings outside the seven register vehicles, but that is arithmetic, not a disclosure `[unverified]` CQG.

5.2 Board and committees

Item	Evidence	Source
Size and independence	18 directors, 7 independent (**38.9%**); 25% legal floor	`[sourced]/[calc]` BRD; GOV
Gender	5 women of 18 (28%); trend 15.8% (2021) to 29.4% (2025, on 17 directors)	`[sourced]` BRD
Family weight	7 directors carry the Servitje surname; all 11 non-independent seats are surname-linked or private-business-tied	`[calc]` BRD
Chair	Executive Chairman Servitje Montull (ex-CEO); no lead independent director; chair has casting vote	`[sourced]` BRD; GOVC
CEO	Alejandro Rodriguez Bas since November 2025; second CEO change since May 2024	`[sourced]` GOV; RA25 pp.76-77
Audit and Corporate Practices	5 of 5 independent; seven meetings in 2025; chair elected only by the shareholders' meeting	`[sourced]` BRD; GOVC
Evaluation, Compensation and Nominations	2 of 4 independent (50%); chaired by a family director; no independence requirement in the regulation	`[sourced]/[calc]` BRD; GOVC
Finance and Planning	1 of 7 independent; can approve acquisitions and guarantees up to 3% of consolidated assets by delegation	`[sourced]/[calc]` BRD; GOV
Attendance 2025	99.0% (101 of 102 slots); one absence (Audit chair)	`[calc]` BRD
Tenure and refresh	12-year cap on independents since 2022; directors may be re-elected indefinitely; age 75 only an "endeavour" (one director is 81)	`[sourced]` GOVC; BRD

LSEG data conflict with the annual report on several dates (CEO start, two directors' exits); the company document is used `[sourced]` BRD.

5.3 ESG governance inside the company

- The Board is the highest body for sustainability; the Chief Supply Chain and Sustainability Officer leads the strategy and the global sustainability function informs the steering committee twice a year; regional committees meet quarterly `[sourced]` ESGF; IC25 pp.143-146.
- Climate reviews: studies updated every three years, risk reviews every four months, quarterly reports to the Global Risk Committee `[sourced]` ESGF; IC25 pp.158-159.
- Directors receive annual sustainability training (2025: anti-corruption and integrity) `[sourced]` ESGF.
- The Audit and Corporate Practices Committee's remit includes sustainability topics `[sourced]` ESGF; IC25 p.140.
- Assurance: KPMG limited assurance (ISAE 3000, report of 2026-06-04) on materials, water, waste and nutrition indicators; the annex shows **no emissions indicators**. Carbon Trust assures renewable electricity and treated-water reuse `[sourced]` ESGF; IC25 pp.176-180.

5.4 Executive pay and ESG

Element	Evidence	Source
Design	Fixed pay; variable pay on four dimensions including ESG indicators; VEAB virtual shares (since 2013), cash-settled 30 months later	`[sourced]` RPT; GOV
LSEG flags	No say on pay, no CEO or executive claw-back, no TSR link, no bonus cap, no individual pay disclosure; pay ratio omitted (GRI 2-21)	`[sourced]` BRD; GOVC
Sustainability-linked incentive	LSEG ESG statement **FALSE** in FY2024 (TRUE in FY2023); TPI sheet answers Yes; RA25 says ESG indicators are in variable pay	`[sourced]` LSEG
S&P CEO pay	CEO compensation success metrics score 0 in every year 2020-2026	`[sourced]` CIQH
Key-management pay	MXN 922 m (2025), 894 m (2024), 796 m (2023); definition changed after 2021 so earlier years are not comparable	`[sourced]` RPT
Board fees	Per session in Mexico MXN 170,000 proposed from April 2026 (+48% vs 2018); about MXN 31.9 m paid in 2025	`[sourced]/[calc]` RPT

The 2026 AGM agenda has no vote on executive pay or on the VEAB plan, and the weights of the four pay dimensions, CEO pay and a pay ratio are not disclosed `[sourced]` CQG. The ESG link in pay is therefore contested across vendors, and the company's own disclosure is general (no weights or targets quoted) `[unverified]` on the exact design.

5.5 Related parties

- Related-party purchases and services: **MXN 9,823 m in FY2025 (2.3% of net sales)** per note 15; MXN 11,237 m in FY2024; MXN 9,608 m in FY2023 `[sourced]/[calc]` GOVC. The 11 named counterparties alone were MXN 9,295 m (2.18% of net sales; a narrower basis) `[calc]` RPT.
- Largest lines in FY2025: Beta San Miguel (8%-owned associate, sugar) MXN 2,500 m; Frexport (related party, not an associate) MXN 1,669 m; La Moderna cookies MXN 1,810 m; Fin Común MXN 1,938 m `[sourced]` RPT.
- **Frexport** purchases rose 80% in 2024 with no stated reason and no disclosed owner `[sourced]/[calc]` RPT. They were MXN 1,141.6 m in 1H24 against 542.3 m in 1H23 (+110%), so 59% of the 2024 total was bought in the first half `[sourced]/[calc]` CQG. Net payables to related parties are MXN 1,154 m (FY2025) and falling `[sourced]` RPT.
- Process: Audit Committee opinion on each deal, board approval with conflicted directors abstaining. But the Global Conflict of Interest Policy does **not** cover directors or shareholders; the Code of Ethics and Integrity Policy do `[sourced]` GOVC; LSEG.

5.6 Minority protection and takeover defences

- Board authorisation is required for any transfer that takes a holder or group to 3% or more of voting shares; a tender offer is required at 30% with board approval `[sourced]` GOVC (bylaws Art. 17, 17 bis).
- Minority thresholds are 10% of capital to appoint a director or call a meeting. That equals **36% of the free float**, and all identified institutions together hold 7.40% `[calc]` GOVC.
- The controlling block alone satisfies the 75% extraordinary-meeting quorum with three more points of attendance `[calc]` GOVC.
- LSEG: shareholders do not vote on executive pay or stock plans; anti-takeover device count is 1 (FY2023-24) `[sourced]` GOVC.
- Section score for takeover and minority protection: **1 of 10** `[assumption]` GOVC.

5.7 Governance scorecard (compiled rubric)

Section	Score	Reading
A. Controlling shareholder	5/10	Amber
B. Board independence and composition	10/20	Amber
C. Committees	6/8	Green
D. Related parties	5/8	Amber
E. Takeover defences and minority protection	1/10	**Red**
F. Pay, ethics, audit	4/8	Amber
Total	**31/64 (48%)**	

`[assumption]` GOVC: rubric scores are a compiled judgement (0 red flag, 1 partial, 2 good practice) for the team to overwrite.

5.8 Ethics, controversies and litigation

Date	Event	Source
2023-06-21	Canada Bread fined **CAD 50 m** (about USD 38 m) for bread price fixing; paid 2023-07-20; two consolidated class actions remain; no provision booked	`[sourced]` RISK; RA25 pp.41, 44, 119
2023	LSEG controversies grade falls to **C**; S&P logs one "Minor" controversy (−0.46 CSA points, −9.06 on Business Ethics)	`[sourced]` LSEG; SPH
2023-12-20	Metro alleges Loblaw conspiracy in the bread price-fixing scheme	`[sourced]` LSEG
2024-11-22	Maple Leaf Foods files a defamation suit against Canada Bread and Bimbo	`[sourced]` LSEG
2024-11-29	Bimbo files a claim of more than CAD 2 bn against Maple Leaf and former officers over the 2014 sale	`[sourced]` RISK
2022-02-24	Bimbo Bakeries pays USD 131k to resolve hiring-discrimination findings (Nebraska plant)	`[sourced]` LSEG

- LSEG flags a UN Global Compact violation TRUE in FY2022 and FY2024 and bribery/corruption controversies TRUE in FY2021, FY2023 and FY2024 `[sourced]` LSEG.
- S&P removed the controversy from its 2024-2025 reports while the class actions stay open; "no controversy" is a screen result, not a clean bill `[sourced]` SPH.
- Ethics system: Speak-Up line recorded 2,128 code-of-conduct claims in FY2024 `[sourced]` GOVC.

- Provisions: total MXN 10,684 m at end-2025, of which uncertain tax positions are MXN 8,537 m (79.9% `[calc]`) `[sourced]` RISK.
- Tax transparency: LSEG flags FALSE every year; S&P Tax Strategy has been 21 since 2021 (industry 30-33) `[sourced]` LSEG; CIQH.

---

6. Ratings and scores

6.1 LSEG (FY2024, exports dated 2026-10-10)

Measure	Value	Grade
ESG score	84.62	A
ESG controversies score	81.25	A-
ESG combined score	**82.93**	**A-**
Environmental (weight 28.74%)	87.62	A
Social (weight 45.14%)	87.35	A
Governance (weight 26.12%)	76.59	A-
Change vs FY2023	87.02 to 84.62 (−2.40)	

`[sourced]` LSEG. Rank 12 of 416 in the food and tobacco peer table; 1 of 4 in Mexico and food and tobacco. History of the combined grade: A- (2024), **B (2023)**, A- (2019-2022), A (2018), B+ (2015-2016), C (2008) `[sourced]` LSEG. FY2025 LSEG scores are not yet in the exports.

Peer (LSEG ESG score)	Score
Danone	90.82
Grupo Bimbo	**84.62**
Nestlé	83.21
Hershey	81.84
Mondelez	79.43
Grupo Herdez	76.87
General Mills	76.10
Campbell's	67.39
Kraft Heinz	63.42
Flowers Foods (closest US bakery peer)	**59.48**
Gruma	50.45

`[sourced]` LSEG (peer analysis). Bimbo is about 25 points above Flowers Foods `[calc]`.

6.2 S&P Global ESG Score (Capital IQ)

Methodology year	2013	2016	2018	2020	2022	2023	2024	2025	2026
Total	43	45	39	50	55	55	**61**	58	**59**
Environmental	28	44	53	58	67	68	72	71	69

Methodology year	2013	2016	2018	2020	2022	2023	2024	2025	2026
Social	49	42	30	44	52	51	61	58	63
Governance & Economic	49	49	36	49	46	46	46	43	46

`[sourced]` CIQH. 2026: CSA score 58; industry average 29; required public disclosure rate 88% and additional disclosure 86%; 4 of 123 questions answered by modelling; Media & Stakeholder Analysis: no data `[sourced]` CIQS.

- Of the +9 total gain from 2020 to 2026, about 7.5 points come from better pillar scores (E +11, S +19, G −3) and about 2.3 from S&P re-weighting toward Environmental (28% to 37%) and away from Governance (42% to 32%) `[calc]` CIQH.
- The 2023-to-2024 jump is partly methodology: S&P raised the Climate Strategy weight from 5% to 8% and added Human Capital Management `[sourced]` SPH.
- Re-scoring noise is material: Health & Nutrition went 100 (Aug-2024), 48 (Aug-2025), 70 (Oct-2025) with no business change `[sourced]` SPH.
- Percentile: CSA percentile slipped from 96 (2024) to 89 (Dec-2025) while the industry average CSA rose from 22 to 31 `[sourced]` SPH.
- Business involvement screens: 0% of revenue in screened activities (FY2025); defence, fossil-fuel and healthcare details are locked by subscription `[sourced]` CIQS.
- Paris alignment: 3-4 °C, "behind" the industry `[sourced]` CIQS.

6.3 Why LSEG and S&P disagree

LSEG ranks relative to a 12,699-company universe and mostly records the presence of policies and committees; S&P scores criteria-level performance against industry peers. The 30-point gap on governance (LSEG A- vs S&P 46) is methodology, but a report citing only the LSEG governance grade would overstate the case `[sourced]` GOVC; LSEG. Cite both. A third vendor view (MSCI, Sustainalytics, DJSI, ISS, FTSE4Good) is not in any source.

6.4 Company-reported recognitions

CDP climate "A" (2022, 2023), CDP water "B" (2025); Bloomberg Gender-Equality Index (since 2023); Ethisphere World's Most Ethical Companies (ninth year); MERCO ESG ranking leader for 12 years; more than 90 recognitions in 2025 `[sourced]` ESGF. For FY2024 performance the company says it was selected for the first time for the S&P Global Sustainability Yearbook, in the top 30% of the packaged-food sector (company statement, annual report of 2026-04-14) `[sourced]` CQG. These are mostly reputation and ethics rankings.

7. Link between ESG, value and risk

7.1 Risk register (descriptive; probability and impact are not scored here)

Theme	What the sources say	Source
Climate targets	2025 Scope 3 target missed; SBTi certification paused; next tests 2027-12-31 (−17.5%) and 2030-12-31 (Scope 1 −50%, Scope 3 −28%)	`[sourced]` SFIN; ESGF
Regulation	Mexico cap-and-trade (pilot 2020-2025; operating rules unpublished; management says participation "will have direct economic effects"); GHG regulation, EU due diligence, deforestation and carbon-border rules; circular-economy law; water-law reform	`[sourced]` CLIM; RISK
Inputs and weather	Wheat is the most relevant commodity; raw materials about 64% of cost of sales; hedge book MXN 315 m at end-2025, 64% wheat	`[sourced]/[calc]` CLIM

Theme	What the sources say	Source
Water	101 sites in high stress; absolute withdrawal +15.1% since FY2019	`[sourced]/[calc]` LSEG
Insurance	Higher premiums for sites exposed to climate events	`[sourced]` RISK
Governance	Controlled company, thin independence, weak minority protection, executive chair	`[sourced]` GOVC
Legal	Canada Bread class actions, no provision; Maple Leaf counter-claim above CAD 2 bn	`[sourced]` RISK
Social and labour	Mexican labour reforms; US multi-employer pension exposure; 11 bakery closures in FY2024	`[sourced]` RISK; PRT
Product	Front-of-pack labelling and school-food rules; consumer shifts on sugar and refined flour	`[sourced]` RISK
Reporting	IFRS S1/S2 filing for FY2025; assurance from 2027; emissions not yet in KPMG scope	`[sourced]` CLIM; ESGF

Wheat and margin. The CFO attributed 60 bp of EBITDA margin in 2022 to the wheat cycle `[guidance]` CLIM (Q3 2023 call). Gross margin fell 197 bp from 2021 to 2022 as average wheat rose 26.5% `[calc]` CLIM. In an exploratory correlation (2017-2025, n = 9) gross margin moved against the prior year's wheat price with r = −0.74; the lag was chosen after looking at the data, so it shows direction, not elasticity `[calc]` CLIM. The wheat series is a Capital IQ chart export with an unlabelled unit read as USD per bushel `[assumption]` CLIM. Average 2026 wheat is running +17% vs 2025 `[calc]`.

7.2 Sustainability-linked financing

Instrument	Size and terms	ESG term	Status
Syndicated revolver	USD 2,350 m (renewed 2025-07-31; undrawn at end-2025); USD 1,931 m (2023); USD 1,750 m (2021, first SL revolver in Latin American food and beverage)	Margin tied to renewable electricity and treated-water reuse	**Not SL-classified from 2026-01-01** because the 2025 targets ended
BBVA México line	MXN 5,000 m, due 2028	Same KPIs	Not SL-classified from 2026
Bank of America loan	USD 125 m (USD 100 m left at end-2025)	Same KPIs	Not SL-classified from 2026
Citi México loan	USD 100 m, due 2027	Same KPIs	Not SL-classified from 2026
Bimbo 23-2L	MXN 3,000 m, TIIE 28d + 0.10%, due 2026-07-24	Scope 3 −12.5% by 2025: **not achieved**; redemption premium of 0.20% = **MXN 6.0 m** `[calc]`	Matured after the 2Q26 balance-sheet date
Bimbo 23L	MXN 12,000 m, 9.24% fixed, due 2033-05-20	Scope 3 −28% by 2030; **+25 bp step-up to 9.49% from 2031-11-21** if not verified as met = **MXN 30 m a year** `[calc]`	Outstanding

`[sourced]` SFIN; BOND; HEDG. Total SL certificates MXN 15,000 m, 28.8% of the certificates listed in RA25 at original face value `[calc]` SFIN. No green use-of-proceeds bond or loan appears in any filing reviewed, even though the April 2023 framework (Sustainalytics second-party opinion) provides for one `[sourced]` SFIN. Open items: the Sustainalytics opinion, annual KPI verification reports and allocation reports are not in the sources `[sourced]` SFIN.

7.3 Is ESG priced anywhere?

- The 23L step-up is about 0.05% of FY2025 EBITDA `[calc]` XSRC. The wiki finds no disclosed price signal that links governance or ESG scores to the cost of debt or equity, and the wiki's cross-source reading is to treat ESG as a risk, not as a catalyst or valuation driver `[sourced]` XSRC. This is an evidence observation; whether to adjust the discount rate or terminal assumptions for ESG is the team's decision.
- Local ratings are AAA at S&P and Fitch (Mexico scale) from the 2023 programme; global IDR BBB+ (Fitch, 2025-08-06) `[sourced]` BOND.

Dated ESG milestones

Date	Event	Source
2026-07-24	Bimbo 23-2L matured	`[sourced]` SFIN
Not dated	Outcome of the SBTi re-baselining and re-certification	`[sourced]` ESGF
Not dated	LSEG FY2025 ESG score release	`[sourced]` LSEG
2027	CNBV assurance requirement for sustainability reports begins	`[sourced]` CLIM
2027-12-31	Scope 3 −17.5% observation	`[sourced]` SFIN
2028-01-01	Mexico front-of-pack labelling phase 3	`[sourced]` RISK
2030-12-31	Scope 1 −50% and Scope 3 −28% observations	`[sourced]` SFIN

7.4 Proposal for team decision

Recommendation (mine, for the team to accept or change). Treat four items as the candidates that carry the ESG section of the report: (1) Scope 3 and SBTi credibility, because it is the one commitment that already missed a financial test; (2) controlled-company governance and minority protection, because all five governance sources agree and it is the weakest pillar; (3) wheat and water exposure, the climate channel that reaches the P&L; (4) the antitrust legacy, because litigation is open and unprovisioned. Use the scores as context, not as a valuation driver.

Strongest case against. A judge can argue that the financial cost is trivial today (MXN 6 m and a possible MXN 30 m a year from 2031) and that the governance profile is a standing feature that the market has priced for decades, so none of the four moves the target price. The ESG section may then be better built around nutrition and regulation (front-of-pack rules, school-food bans), which affect volumes and are rated best by third parties.

Question for the team: Which one of the four themes would you defend in front of the judges as the single ESG issue that could change the recommendation, and what would you need to see to downgrade it?

---

8. Information gaps

Status after the three Capital IQ rounds of 2026-10-17 (Prompts A-D, B1-B3, C, D, E and F; compiled in `bimbo-esg-capiq-gap-fill-2026-10`). Round 3 (Prompt F) returned no document. The team decided to freeze this report with the gaps below as declared limitations, because the information cannot be obtained now; nothing in the report depends on them being closed, but every `[unverified]` figure must be resolved or removed before it is used in the official report. Capital IQ AI output is AI-generated without human review and several lines were unusable (FY2023 capex "above US$2 billion", FY2024 training "26 million hours", the director committee matrix); they were checked against the wiki and excluded.

#	Section	Gap	Status	What is left and how to close it
1	3.2	Verified FY2025 emissions; SBTi status	**Partly closed.** Series FY2019-FY2025 confirmed and equal to LSEG; SBTi suspended at the company's request	FY2024 verification is in process and the verifier is not named; FY2025 is preliminary; outcome of re-certification pending: company IR, SBTi site
2	3.2	KPI definition behind the 23-2L miss	**Closed.** Absolute Scope 3 vs 8,021,824 t; target missed; the −22% reconciles to a base mix	Verifier and whether the recalculated base applies: offering notice, company IR
3	6, 3	Peer ESG data (S&P scores, CDP, emissions) for nine comparables	**Open.** Prompts B and B1-B3 returned nothing: the account has no S&P ESG, Trucost, CDP or governance modules	LSEG peer scores already in the wiki; peers' public sustainability reports (manual table); see `CapitalIQ_Input_ESG.md`
4	6	MSCI, Sustainalytics, ISS, DJSI, FTSE4Good, CDP water	**Open.** Not in Capital IQ; only the S&P Yearbook inclusion (company statement)	Vendor sites or other licences of the team
5	5.4	Pay-dimension weights, CEO pay, pay ratio	**Confirmed not disclosed.** No pay vote on the 2026 AGM agenda	Proxy for the 2027 AGM; company IR
6	5.1, 5.5	Owners of the holding companies and of Frexport; reason for the Frexport rise	**Open.** Filings and Capital IQ profiles disclose no owners (Monser has no profile; "Autotab" resolves to a French fund)	Company IR; public company registry
7	3.7	Climate capex, carbon cost, internal carbon price	**Closed as not disclosed.** FY2026 total capex guide US$1.0-1.2 bn	Ask company IR for the sustainability capex amount
8	4.1, 4.2	Gender pay, turnover, safety by region	**Partly closed.** Gender pay FY2024, turnover by region FY2024, safety FY2022-FY2024; FY2024 fatalities confirmed at 5	FY2025 workforce and safety; contractor safety; global turnover; regional safety
9	6.1	FY2025 LSEG ESG scores	**Open**	LSEG (outside Capital IQ)
10	7.2	Sustainalytics second-party opinion; KPI and allocation reports	**Open**	Company IR; Sustainalytics
11	6.2	Defence, fossil-fuel and healthcare screen detail	**Open.** Not returned by Capital IQ	Run the Capital IQ Sustainability screen with a licence that includes it
12	3.4	Water-stressed site count; FY2025 water intensity	**Closed.** 101 work centers (89 is likely the plant subset); 1.16 m^3 per tonne in 2025	Global withdrawal FY2019-FY2024 as a single series
13	3.2	FY2024 Scope 3 by category	**Open**	Integrated report 2024 data file

Data conflicts register (use the company-document figure unless noted)

Item	Version A	Version B	Working choice
Renewable electricity 2025	100% (integrated report)	99% (LSEG-filed annex, preliminary)	Quote both, with the definition
Workforce	170,642 incl. contractors / 147,873 payroll	"More than 153,000"; LSEG 170,046 / 152,366; Capital IQ AI 151,161 (FY2024)	Name the definition
Scope 3 progress	−22% (2024) and −19% (Q3 2025)	+46.7% in 2025 vs the original base of the bond KPI	The bond base; the −22% is a base mix `[unverified]`

Item	Version A	Version B	Working choice
Water-stressed sites	101 work centers	89 manufacturing sites	Both, with the definition
Employee fatalities 2024	5 (company GRI 403-9 table, IAR24 p.278)	0 (LSEG)	5 `[sourced]`; LSEG treated as missing data
FY2019 Scope 1	1,102,372 (company original)	1,098,588 (LSEG); 1,082,002 (IAR23)	1,102,372
Internal carbon price	Disclosed (TPI)	False (LSEG), 0 (S&P); not disclosed (company, per Capital IQ AI)	Flag as contested
Sustainability-linked pay	TRUE (RA25, TPI)	FALSE (LSEG FY2024)	Flag as contested
Employee safety	TRIR 1.59 (company)	LTIFR 1.42 (S&P); LTIFR 1.34 (company, 2024)	Different metrics
Women in leadership	30.51% (company)	25.00% (S&P, all management)	Different definitions
Control group	72.03% (register)	81% (3Q22 deck)	72%

Key Takeaways

- Third-party ESG ratings are high (LSEG A, S&P 59 vs industry 29) but governance is the weak pillar in every source; the controlled-company structure, 38.9% independence and 1/10 minority-protection score are the evidence.
- FY2025 emissions rose and the 2019 baseline was lifted 42% for Scope 3; the Scope 3 2025 target is missed on either baseline, and SBTi certification is paused.
- The financial cost of missed ESG targets is small (MXN 6 m now, up to MXN 30 m a year from 2031), and no source links ESG scores to cost of capital.
- Wheat and water are the climate channels that reach the P&L (−197 bp of gross margin in 2022; 101 sites in high water stress).
- Canada Bread antitrust litigation is the clearest open legal liability, with class actions unprovisioned.
- Capital IQ AI answers (Prompts A-D) closed the bond KPI definition, SBTi status, the Scope 3 base question and the water-site count, but Prompt B (peer ESG) returned nothing; round 2 confirmed 5 employee fatalities in 2024 (LSEG shows 0) and showed that the account has no peer ESG, vendor-rating or ownership modules.
- Thirteen information gaps are tracked, of which seven are still fully open; the largest are peer ESG data, the other vendors' ratings and the owners of the holding companies; they stay as declared limitations in `BIMBOA_Consideraciones_y_Brechas_ESG`.
