Question: Climate Strategy Impacts
Include Modeled Scores : Yes

Climate Strategy Impacts

Question

For your combined emissions reduction activities that were active in the latest reporting year, please provide the estimated annual CO2e savings and the anticipated annual cost savings from these initiatives.

Rationale

This question focuses on the targets and initiatives companies have in place to reduce the emissions derived from their activities, and more specifically it aims to find out if companies systematically evaluate their emission reduction initiatives.

Performance Summary	
Question Level Company Performance	50
Question Weight	10
Year-on-Year Change	0
Industry Average Score	36
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Data Requirements

Please note that emissions reduction initiatives that were active within the reporting year can also include those in the planning and implementation phases. It is acknowledged that diverse companies often have large number of emissions reduction initiatives operating over varying time periods and scales. Companies should answer this question in the context of the reporting year. This could include initiatives that have become operational within the reporting year (e.g. installation of new equipment, or instigation of new operational practices) or commitments that have been made in the reporting year (e.g. investments made which are yet to become fully operational).

As a result of changes introduced in Scope 2 accounting this year, you can reflect any renewable energy purchasing policies as a component of emission reduction activities. Please bear in mind, however, that if you are already buying renewable energy instruments and accounting them as a zero-emission factor, then emission reductions activities can only be achieved as "additional purchases" to what you are already doing. Therefore, emission reductions activities are established by comparing what you have done in the previous year and what you are proposing to do for next year(s). Measures taken to reduce Scope 3 emissions may be reported here.

Estimated annual CO2e savings: Enter the expected annual CO2e savings, in metric tons, occurring with the initiative in place and fully operational (for the entire duration of the reporting year). It is acknowledged that this figure is likely to be an estimate. Where savings occur on a non-annual basis, please average out so that an annual figure can be provided. If no figures can be provided for the whole company, also figures for separate operations can be reported. If this is the case, please specify the coverage of the data and how estimates have been made in the comment box.

Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

Annual monetary savings: Please enter the amount of monetary savings per year expected from the initiative (e.g. reduced energy costs) once it is fully operational. Where savings occur on a non-annual basis, please average out so that an annual figure can be provided. It is acknowledged that this figure is likely to be an estimate. If no figures can be provided for the whole company, also figures for separate operations can be reported. If this is the case, please specify the coverage of the data and how estimates have been made in the comment box.

Investment required: Please enter the total investment required for the initiative over its lifetime. Please note that for this part of the question we are looking for the total annual investment needed for the combined emission reduction activities, the amount estimated the company must invest on an annual basis and to how much this amounted in the last reporting year. It is acknowledged that this figure is likely to be an estimate. If no figures can be provided for the whole company, figures for separate operations can also be reported. If this is the case, please specify the coverage of the data and how estimates have been made in the comment box.

Payback period: The payback period reflects the time it takes for the investment made to be offset by the monetary savings from the initiative: **(payback period = investment/monetary savings)**. It is acknowledged that this figure is likely to be an estimate. If no figures can be provided for the whole company, also figures for separate operations can be reported. If this is the case, please specify the coverage of the data and how estimates have been made in the comment box.

There is no need to record every action – initiatives can be recorded on a programmatic level. Companies with large numbers of initiatives should prioritize those that have the potential to provide a meaningful contribution to emissions reductions.
