Indirect Greenhouse Gas Emissions (Scope 3)

Question

Does the company track its indirect greenhouse gas emissions (Scope 3)?

Rationale

While many climate-change risks and impacts can be attributed to companies' direct activities, many may lie elsewhere in the value chain. Today, Scope 1 and 2 emissions are broadly reported, but quantifying and reporting Scope 3 emissions poses a bigger challenge for companies. Increasingly, it is becoming important to understand the source of these emissions and how companies can work to decrease the impact of their indirect activities. With this question, we assess to what extent companies consider Scope 3 emissions in their value chain.

Performance Summary

Question Level Company Performance	100
Question Weight	11
Year-on-Year Change	0
Industry Average Score	39
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

Relevance: This refers to one of the five principles of the GHG Protocol's Corporate Value Chain Accounting and Reporting Standard, which states that the scope 3 inventory should be based on the assumption that it ensures the GHG inventory appropriately reflects the GHG emissions of the company and serves users' decision-making needs– both within and beyond the company. Companies should use the principle of relevance when determining whether to exclude activities from the inventory boundary. Companies should also use the principle of relevance as a guide when selecting data sources.

According to the GHG Protocol, companies may use two types of data to calculate scope 3 emissions: primary and secondary data.

Primary data: includes data provided by suppliers or others that directly relates to specific activities in the reporting company's value chain. Primary activity data may be obtained through meter readings, purchase records, utility bills, engineering models, direct monitoring, mass balance, stoichiometry, or other methods for obtaining data from specific activities in the company's value chain.

Secondary data: includes industry average data (e.g., from published databases, government statistics, literature reviews, and industry associations), financial data, proxy data, and other generic data. In specific cases, companies may use specific data from one activity in the value chain to estimate emissions for another activity in the value chain. This type of data (i.e., proxy data) is considered secondary data, since it is not specific to the activity for which emissions are being calculated.

Data Requirements

For this question, our expectations are aligned with the guidelines of the GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard. That means that we expect companies to account for all scope 3 emissions and disclose and justify any exclusions (Completeness Principle of the GHG Protocol Scope 3 Standard).

Explanation for relevance: please provide details regarding how you have reached the conclusion that the source is relevant to your organization. Relevance should be determined with reference to the GHG Protocol Scope 3 Standard.

Emissions calculation methodology: please provide a short description of the types and sources of data used to calculate emissions (e.g. activity data, emission factors and GWP values), along with a description of the methodologies, assumptions and allocation methods used to calculate emissions.

Percentage of emissions calculated using data obtained from suppliers or value chain partners: please provide the percentage of emissions calculated using primary data.

Questionnaire

Please specify the top three most relevant sources of scope 3 emissions to your organization which accounted for the majority of your scope 3 emissions in FY 2019. For each source you select, please provide an explanation of the relevance of the source to your business and an explanation of the calculation methodology used.

1. ○

Source	Explanation for relevance	Metric tons CO2e	Emissions calculation methodology	Percentage of emissions calculated using data obtained from suppliers or value chain partners
Please select				
Please select				
Please select				

2. ○ We do not consider Scope 3 emissions.

3. ○ Not applicable. Please provide explanations in the comment box below.

4. ○ Not known
