Low-Carbon Products

Question

Please provide details of your products and/or services that you classify as low carbon products or that enable a third party to avoid GHG emissions. You may provide information on either low carbon products, avoided emission products or both, depending on the relevance of the product types to your business.

Rationale

This question focuses on the initiatives companies have in place to reduce the emissions derived from their activities – whether directly through their products or through the provision of products or services to third-parties to reduce their own emissions. The question focuses on the concepts of "low carbon products" and "avoided emissions". There are various circumstances in which a company might consider that the use of its goods and services by others has the potential to reduce GHG emissions. For example, an insulation company might consider that the installation of its insulation in another organization's premises might reduce the consumption of gas to heat the building, with the consequent reduction of GHG emissions from the property. Similarly, a consultancy providing advisory services on energy efficiency/emissions reductions or a manufacturer producing a product with lower energy use requirements,

As the pressing need for reducing greenhouse gas emissions continues, investors are looking at different mechanisms to reduce the carbon intensity of their investments. They look beyond direct emissions and increasingly consider low carbon products and avoided emissions at 3rd parties (scope 3 emissions) for the overall calculation of the carbon footprints of their portfolios.

Taxonomies such as the Climate Bonds Taxonomy, Low-Carbon Investment (LCI) Registry Taxonomy, Addressing the Avoided Emissions Challenge for the Chemicals sector similarly function within this scientific parameter. Companies are encouraged to use this parameter when evaluating whether a product is low carbon or not and should evaluate their low carbon products in relation to their contribution to a low carbon economy. Different goods and services will have pertinent characteristics in which they can do this. This can include improving the energy efficiency of certain technologies so that they are consistent with avoiding dangerous climate change, or contribute to the adaptation side of dangerous climate change.

Key Definitions

Low carbon products: products with low embedded emissions that contribute to the transition of a low carbon economy e.g. products required less raw material during the production process.

Avoided emissions products: products or services that allow a company's client (i.e. a third party) to reduce their environmental footprint and avoid emissions e.g. eco-efficient products.

Data Requirements

% of total revenues from "climate change" product(s): Please specify the proportion of your revenue during the reporting year from your products that you classify as low-carbon products or that enable a third party to avoid GHG emissions. Revenue is defined as sales, net of taxes.

Estimated total avoided emissions per year: Please specify what is the amount of avoided emissions per year that your products facilitate.

Level of aggregation: In this field, you need to select what level of aggregation you wish to report on. For example, you may only produce one product that can be classified as 'low carbon.' In this case, you may want to report at the product level of aggregation. Alternatively, if your company produces hundreds of low carbon products, you may wish to report at a company-wide level.

Questionnaire

Please provide details of your products and/or services that you classify as low carbon products or that enable a third party to avoid GHG emissions. You may provide information on either low carbon products, avoided emission products or both, depending on the relevance of the product types to your business.

1. ○

Type	Description of product(s)	Level of aggregation	% of total revenues from "climate change" product(s) in FY 2019	Estimated total avoided emissions per year	Comment
Low carbon product(s)		Please select			
Avoided emissions for third-parties		Please select			

2. ○

No, our products are not low carbon and/or the use of our products does not directly enable avoiding GHG emissions.

3. ○

Not applicable. Given the nature of our products, services and/or business model, this question is not applicable to our company. Please provide explanations in the comment box below.

4. ○

Not known
