Packaging Materials

Question

Does the company track the amounts of packaging materials used?

Rationale

Packaging protects the products and also has an impact on consumers' decision to buy the product. However, before and after the use of the product, most packaging ends up in landfill. Therefore, reducing packaging and/or using recycled or certified material is an important factor in lowering the environmental impact of the product in its wider life cycle. This question tests whether the company's packaging strategy includes environmental considerations.

Performance Summary	
Question Level Company Performance	10
Question Weight	33
Year-on-Year Change	(90)
Industry Average Score	21
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key definitions

Packaging: Packaging refers to all materials used to wrap, serve or protect goods. This only includes post-consumer packaging, which includes packaging waste produced during the shipping process, before having reached the company's end consumer or customer, as well as the packaging waste produced by the company's end consumer or customer after having used or consumed the product. This means that we expect companies to also include non-retail (e.g. polybags used during shipping) and operational packaging (e.g. plastic bags in stores, e-commerce packaging).

Post-consumer: It is not limited to the company's end consumer, but to any party receiving the final packaged product, and includes B2B packaging. Post-consumer waste is distinguished from pre-consumer waste, which is the reintroduction of manufacturing scrap back into the manufacturing process. Materials used in the product itself are not to be included, only materials used to ship and package the products sold or provided to consumers and/or customers.

Recycled material: It is defined as material that has been reprocessed from recovered (or reclaimed) material by means of a manufacturing process and made into a final product or a component for incorporation into a product. Recovered material is defined as material that would have otherwise been disposed of as waste or used for energy recovery, but has instead been collected and recovered (or reclaimed) as a material input, in lieu of new primary material, for a recycling or manufacturing process. This only includes post-consumer recycled material.

Recyclable packaging which are collected by the company through take-back programs and sent to be recycled or are reused for the same purpose may also be included in this percentage, as such initiatives ensure that recyclable packaging actually get recycled.

Certified raw material: It is defined according to widely recognized schemes to provide assurance that materials are sourced in a way that limits negative externalities and meet minimum environmental and social standards. Examples include FSC, PEFC, and SFI for wood/paper fibers.

Recycled material which is also certified should not be double counted. For example, if 25% of your packaging is made out of recycled content and certified for it, then you should only enter 25%.

Coverage: Please indicate how much of your product packaging is included in the data disclosed by reporting the coverage as a percentage of cost of goods sold.

Cost of goods sold: Cost of goods sold refers to the direct costs of producing the goods sold by a company. This amount includes the cost of the materials and labor directly used to create the good. It excludes indirect expenses, such as distribution costs and sales force costs. A synonym is "cost of sales". For Retailing (RTS and FDR) companies, the cost of goods sold from their own-branded products should be considered.

Data Requirements

This question focuses on packaging materials which are not plastics. Plastic packaging is covered in the next question.

Companies in the FDR Food & Staples Retailing Industry that are classified as drug retailers should mark this question as "Not Applicable" and provide a brief explanation in the comment box.

Companies in the Casinos & Gaming industry (CNO) that are only into online gaming should mark "Not Applicable" and provide an explanation in the comment box.

Companies in the Retailing (RTS) and the Food & Staples Retailing (FDR) industry should only report on their own branded products. This only applies to these two industries.

NAP may NOT be ticked for FDR, REX, FOA and BVG companies which are not legally allowed to use recycled content in their packaging. We expect them to have take-back programs in place to ensure that their packaging is recycled or reused for the same purpose.

For points to be awarded for public disclosure, the percentage of recycled/certified material needs to be publicly disclosed for at least one packaging material.

Questionnaire

Please indicate the volumes of each different type of packaging used for your products. Please note that plastic packaging is covered in the next question and is not to be considered here.

1. ◌

We monitor the amounts of packaging materials used. If publicly available, please indicate where this information can be found in your **public reporting** or **corporate website**.

Please disclose which of the following material types are used in your company's packaging for the **fiscal year 2019**. If made out of recycled and/or certified material, please detail the share (as a % of total weight) in the relevant categories and the target associated with the use of recycled and/or certified material (as a % of total weight) for the last fiscal year.

Packaging Materials	Coverage (% of cost of goods sold)	Total Weight (metric tonnes)	Recycled and/or Certified Material (% of total weight)	Target 2019 (% of total weight)
Wood/Paper fiber packaging				
1. ☐ Material not used in packaging
