Customer Satisfaction Measurement

Question

Does the company monitor and set quantitative targets to improve satisfaction and are targets and results communicated externally?

Rationale

Research from Harvard Business School has shown that a 5% increase in retention can result in a bottom-line profit increase of up to 75%, depending on the industry. The dramatic economic power of customer retention is revealed when viewing customers in terms of lifetime value (LTV). The value of retaining customers makes perfect business sense when one considers that a consumer retained for life is more cost effective, requires less service, provides more business and contributes to new customer acquisition by offering positive referrals. Companies in consumer-facing industries (B2C) should therefore monitor customer satisfaction and report the results of satisfaction surveys targeting consumers (i.e. end users) of their products/services.

Performance Summary

Question Level Company Performance	0
Question Weight	54
Year-on-Year Change	0
Industry Average Score	24
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

Customer: someone who buys services or goods from someone else. In the context of this questionnaire, we focus on customers for B2B companies.

Consumer: someone that consumes a certain product or commodity. In the field of economics, a consumer can either be a single person or an entire organization using a certain type of service. In the context of this questionnaire, we focus on consumers for B2C companies.

Data Requirements

Companies in consumer-facing industries (B2C) should report the results of satisfaction surveys targeting consumers (i.e. end users instead of the distributor/retailers they sell their products through) of their products/services. For companies who only survey direct customers (e.g. distributors) and do not directly monitor consumer satisfaction, please provide available data and indicate this in the comment box.

Unit: % of satisfied customers out of total number of customers responding to the survey

The percentage should be calculated as follows:

Number of satisfied customers / Total number of customers responding to the survey

Data Coverage: % of customers surveyed (both respondents and non-respondents) out of total customers

The data coverage should be calculated as follows:

Number of customers surveyed (both respondents and non-respondents) / Total number of customers

Companies may report full coverage if a statistically significant, representative sample of its customer base has been surveyed.

Target: We require the absolute target for the most recent reporting year. If your company has a multiple-year and/or relative target, please extrapolate what the target value would have to be for the last financial year to make sure you are progressing well towards achieving the target by the end of the target period.

Bi-annual satisfaction surveys: If your company only conducts a customer satisfaction survey every two years, then please copy the results from the previous year (when you did conduct a survey) into the box for the following year (when you did not conduct one). For example, if you conducted a survey in 2015 but not in 2016, copy the results from the 2015 survey in the 2016 box, so as to fill the entire table and make it possible to calculate a trend. (FY-2 – FY0).

Disclosure requirements for partially public question. Additional credit will be granted for relevant publicly available evidence covering the following aspect of this question:

- Percentage of satisfied clients in the last reported year (measured through a satisfaction survey or through an alternative approach).

Questionnaire

Does your company monitor and set quantitative targets to improve customer satisfaction and are targets and results communicated externally? Please attach documents and indicate the coverage for the data provided. Please refer to the information button for additional clarifications. For each row in the table, it is mandatory that the values provided are in the same unit.

1. ○
   We measure customer satisfaction with the unit "% of satisfied customers out of total number of customers responding to the survey." Please complete the table below and attach supporting evidence.
   1. ☐
      Please tick this option if your supporting evidence is available in the public domain

Customer Satisfaction	Unit	FY 2016	FY 2017	FY 2018	FY 2019	What was your target for FY 2019?
Satisfied customers	% of satisfied customers out of total number of customers responding to the survey					
Data coverage: % of customers surveyed (both respondents and non-respondents) out of total number of customers, % of revenues, etc.	percentage of					

2. ○
   We use another approach or unit to measure satisfaction. Please specify, attach supporting evidence and complete the table below.
   1. ☐
      Please tick this option if your supporting evidence is available in the public domain

Customer Satisfaction	Unit	FY 2016	FY 2017	FY 2018	FY 2019	What was your target for FY 2019 ?
Please specify approach used	Please specify unit					
Data coverage: % of customers surveyed (both respondents and non-respondents) out of total customers, % of revenues, etc..	percentage of					

3. ○
   Customer satisfaction is not monitored
4. ○
   Not applicable. Please provide explanations in the comment box below.
5. ○
   Not known
