Question: Open Innovation
Include Modeled Scores : Yes

Open Innovation

Question

Please indicate three approaches you have adopted to profit from or contribute to external knowledge to complement in-house R&D. For each approach selected, please provide examples, add supporting evidence and describe/quantify the impacts of the open innovation approach. Please select three different approaches from the provided drop-down menus. Duplicate approaches will not be accepted.

Rationale

Innovation is a process that depends on a variety of factors such as knowledge, experience and creativity. In order to access, collect and combine those factors, a variety of collaborative input channels are available. With this question, we assess the use of an extensive set of input channels, with special attention to state-of-the-art innovation indicators covering the whole development chain. We look at whether (and how) companies contribute and participate in knowledge building and sharing.

Some examples of open innovation approaches include (but are certainly not limited to): the use of business partners or third-party collaborations, distributed creativity such as crowd-sourcing, technology licensing and open-source initiatives.

Performance Summary	
Question Level Company Performance	29
Question Weight	30
Year-on-Year Change	29
Industry Average Score	20
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

▼ Additional Question Guidance & Information Display

Key Definitions

Efficiency gains: A description and impact assessment of the selected approach including quantification (e.g. reduction of the innovation process duration (time unit), reduction of the time to market a product (time unit), etc.)

Cost reduction: A description as well as the quantified impact on R&D costs (monetary unit).

R&D collaborations with external business partners: include collaborations with universities, research centers, joint ventures, industry associations.

Distributed creativity: include customer design contests, crowd sourcing (can be external or company-internal aka "silo-breaking" initiatives)
