Key Definitions

Process innovations: They include processes that are new to the company and includes the introduction of technically new or majorly improved manufacturing technologies for the production of goods, respectively for the supply of services or objects. This might also lead to product changes, but the increase in efficiency is the main goal. New manufacturing processes that are sold to other companies are considered product innovations. Environmental and social process improvements are also considered process innovations. Pure organizational or management changes, however, are not considered process innovations.
