Gender Pay Indicators

Question

Does the company track the results of its gender pay gap or equal pay analysis?

Rationale

We assess various Labor KPIs at an organization to determine the quality and transparency of its reporting. This question looks at whether remuneration is equal between the female and male workforce at different management levels.This question looks at disclosure of salaries for men and women at different levels of responsibility, and performance, with the performance aspect specifically considering the relative base salaries of male and female managers and the relative base salaries plus incentives for male and female managers. The rationale for this is that base salaries are generally regulated by law, and any differences could be explained by factors other than gender (such as experience, responsibilities, education, etc.), but the relative difference would not be expected to increase significantly when adding on the more subjective incentives and bonuses.

Performance Summary	
Question Level Company Performance	65
Question Weight	36
Year-on-Year Change	15
Industry Average Score	32
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

Management Level: all management-level positions from first-line/junior managers up to top/senior managers with a reporting line 2 levels or less from the CEO but not executive-level positions

Non-Management Level: production and administrative positions.

Data Requirements

Remuneration ratios: Companies must report the actual ratios. If companies have policies on equal remuneration or ambitions to have equal between men and women, the actual figures must still be provided.
Data coverage: Companies should report on their global workforce. If the figures do not cover global operations, this should be clearly indicated.

Disclosure requirements for partially public question: Additional credit will be granted for relevant publicly available evidence disclosing at least one of the ratios requested, or the raw figures underlying the ratio which can be used to then calculate a ratio.

References

The gender equality section was developed in collaboration with the EDGE Certified Foundation, a Swiss foundation focusing on fostering gender equal workplaces through a global certification system in gender equality. The foundation focuses on global corporations as the key drivers for sustainable, positive change in business and society.

The study **"Do Firms Respond to Gender Pay Gap Transparency?"** (January 2019) examined the effect of pay transparency on the gender pay gap and firm outcomes by examining a 2006 policy change in Denmark that required firms to provide gender dis-aggregated wage statistics. Using detailed data and a differences-in-differences statistical approach, Bennedsen et al found that the law indeed reduced the gender pay gap.
