Climate Risk Assessment - Transition Risks

Question

Has your company assessed transition risks related to climate change? Please provide supporting evidence and indicate where this is available in your public reporting.

Rationale

Today, nearly all organizations are affected by climate change-related risks. However, the most significant effects of climate change are likely to emerge over the medium to longer-term, while the precise timing and magnitude of these impacts remain uncertain. This uncertainty represents a challenge for organizations and investors to understand the potential effects of climate change on their businesses, strategies, and financial performance. To appropriately incorporate these potential impacts in their planning processes, organizations need to consider how such risks and opportunities may evolve and what the potential implications may be under different conditions. One way to do this is by using climate-related scenario analysis.

This question is aligned with the TCFD recommendations, which include a recommended disclosure on the resilience of the organization's strategy, taking into consideration different climate-related scenarios, including a 2°C or lower scenario.

This question is also aligned with the European Non-financial Reporting Directive 2014/95/EU, which demands that when reporting on their climate-related risks and opportunities, companies consider their whole value chain. Indeed, risks of negative impacts on an organization and risks of negative impacts on the climate may arise from companies' own operations and may also occur throughout the value chain, both upstream in the supply chain and downstream.

Performance Summary	
Question Level Company Performance	15
Question Weight	5
Year-on-Year Change	0
Industry Average Score	13
Industry Highest Score	85

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

Risk Assessment: Systematic process for an organization to evaluate potential risks that may impact its assets and operations.

Scenario Analysis: Process for identifying and assessing a potential range of outcomes of future events under conditions of uncertainty. In the case of climate change, for example, scenarios allow an organization to explore and develop an understanding of how the physical and transition risks of climate change may impact its businesses, strategies, and financial performance over time.

(TCFD (2017), Recommendations of the Task Force on Climate-related Financial Disclosures)

Transition risk: Transitioning to a lower-carbon economy may entail extensive policy, legal, technology, and market changes to address mitigation and adaptation requirements related to climate change. Depending on the nature, speed, and focus of these changes, transition risks may pose varying levels of financial and reputational risk to organizations. Transition risks can be divided into four categories: policy and regulatory risks, technological risk, market risk, and reputational risk.

- **Policy, regulation and legal risks** include implementing carbon-pricing mechanisms to reduce GHG emissions, shifting energy use toward lower-emission sources, and adopting energy-efficiency solutions. The risk associated with and financial impact of policy changes depend on the nature and timing of the policy change. Another important risk is litigation risk, which can occur as a result of litigation by for example property owners, municipalities, states, insurers, shareholders, and public interest organizations.
- **Technological risks** result from technological improvements or innovations that support the transition to a lower-carbon, energy-efficient economy. For example, the development and use of emerging technologies such as renewable energy, battery storage, energy efficiency, and carbon capture and storage will affect the competitiveness of certain organizations, their production and distribution costs, and ultimately the demand for their products and services from end-users.
- **Market risks** can impact the company in various ways. One of the major ways is through shifts in supply and demand for certain commodities, products, and services.
- **Reputational risks** may arise from changing customer or community perceptions of an organization's contribution to or detraction from the transition to a lower-carbon economy.

(TCFD (2017), Technical Supplement: The Use of Scenario Analysis in Disclosure of Climate-related Risks and Opportunities)

Value Chain: Terminology used to describe the upstream and downstream life cycle of a product, process, or service, including material sourcing, production, consumption, and disposal/recycling.

Upstream activities include operations that relate to the initial stages of producing a good or service, e.g. material sourcing, material processing, supplier activities.

Downstream activities include operations that relate to processing the materials into a finished product and delivering it to the end-user (e.g. transportation, distribution, and consumption).

(TCFD (2017), Technical Supplement: The Use of Scenario Analysis in Disclosure of Climate-related Risks and Opportunities)

Data Requirements

Please include in your response all the scenarios based on which you assess the transition risks related to climate change.

In line with the TCFD recommended disclosure, two scenarios are required for full scoring, one of which has to be a 2°C or lower scenario.

If your company conducts a scenario analysis and uses another method, please describe the three following elements:

- Parameters used (e.g. discount rate, GDP, other macro-economic variables, etc.)
- Assumptions made (e.g. assumptions related to policy changes, technology development/deployment, energy mix, price of key commodities or inputs, geographical tailoring of transitional and physical impacts, and timing of potential impacts)
- Description of the different scenarios with time horizons set

Additional credit will be granted for public disclosure of:

- At least one climate-related scenario
- The focus and scope of the climate risk assessment

Data View	
QUESTION LEVEL INPUT	**COMPANY ANSWER**
Company's Climate Change Risk Assessment - Transition Risks	Yes
The company publicly reports on its climate risk assessment's scenario analysis regarding transition risks	-
The company's climate risk assessment regarding transition risks scenario analysis methodology	Qualitative and quantitative
The company uses the IEA 2DS scenario as a climate-related scenario for transition risks	-
The company uses the IEA B2DS scenario as a climate-related scenario for transition risks	-
The company uses the IAE 450 scenario as a climate-related scenario for transition risks	-
The company uses the Greenpeace scenario as a climate-related scenario for transition risks	-
The company uses the DDPP scenario as a climate-related scenario for transition risks	-
The company uses the IEA SDS scenario as a climate-related scenario for transition risks	-
The company uses the IEA NPS scenario as a climate-related scenario for transition risks	-
The company uses the IEA CPS scenario as a climate-related scenario for transition risks	-
The company uses the IRENA scenario as a climate-related scenario for transition risks	-
The company uses the NDCs scenario as a climate-related scenario for transition risks	-
The company uses the BNEF NEO scenario as a climate-related scenario for transition risks	-
The company uses the MESSAGE-GLOBIUM scenario as a climate-related scenario for transition risks	-
The company uses the REMIND scenario as a climate-related scenario for transition risks	-
The company uses different climate-related scenarios for transition risks from the ones listed	-
The company publicly reports on the scope and focus of its climate risk assessment regarding transition risks	-
The scope of the climate risk assessment regarding transition risks includes the company's own operations	YES
The company's assessment of transition risk is based on potential scenarios for legislation, technological development or market conditions	YES
The scope of the climate risk assessment regarding transition risks is consistent with the expected lifetime of the company's assets or activities	-
The scope of the climate risk assessment regarding transition risks includes upstream activities	-
The scope of the climate risk assessment regarding transition risks includes downstream activities and clients	-

Questionnaire

Has your company assessed transition risks related to climate change?

1. (●)

Yes, we have completed an assessment of material transition climate risks for our company. This has the following characteristics. Please select any that apply regarding your assessment, provide supporting evidence and indicate where this is available in your public reporting.

Methodology

1. ☐

We publicly report on our scenario analysis

1. ○

We use qualitative climate-related scenario analysis

2. ○
   We use quantitative climate-related scenario analysis
3. ◉
   We use qualitative and quantitative climate-related scenario analysis
4. ○
   We do not use climate-related scenario analysis

If your organization uses climate-related scenarios for transition risks, please select any that apply:

1. ☐ IEA 2DS
2. ☐ IEA B2DS
3. ☐ IAE 450
4. ☐ Greenpeace
5. ☐ DDPP
6. ☐ IEA Sustainable Development Scenario
7. ☐ IEA NPS
8. ☐ IEA CPS
9. ☐ IRENA
10. ☐ Nationally determined contributions (NDCs)
11. ☐ BNEF NEO
12. ☐ MESSAGE-GLOBIOM
13. ☐ REMIND
14. ☐ Other (please specify):

Scope and focus of assessment

1. ☐ We publicly report on the scope and focus of the assessment
1. ☑ The scope of our assessment includes our own operations

   Please select the type(s) of assessment that apply:

   1. ☑ Assessment of transition risk based on potential scenarios for legislation, technological development or market conditions
   2. ☐ Assessment consistent with the expected lifetime of the assets or activities
2. ☐ The scope of our assessment includes our upstream activities
3. ☐ The scope of our assessment includes our downstream activities and clients

2. ○ We have not completed a climate-related risk assessment for transition risks.
3. ○ Not applicable. We do not consider our company's assets or operations to be exposed to transition risks related to climate change. Please provide explanations in the comment box below.
4. ○ Not known
