Question: Exposure to Water Stressed Areas
Include Modeled Scores : Yes

Exposure to Water Stressed Areas

Question

Does the company systematically track and map its plant water usage with a comprehensive water tool taking into account local water stress?

Rationale

The rationale for the following questions is twofold: (i) determining the exposure of the organization to water-related risks and (ii) determining if the organization has a system in place enabling awareness of its own exposure to water-related risks. We expect the company to use a generally accepted water risk tool or provide similar evidence that water risk mapping has been done on a local / plant-level detail.

Performance Summary

No Data Available

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

Water stress: "When withdrawals are greater than 20% of total renewable resources, water stress often is a limiting factor on development; withdrawals of 40% or more represents high stress. Similarly, water stress may be a problem if a country or region has less than 1,700 m3 yr-1 of water per capita (Falkenmark and Lindh, 1976)." Source: IPCC Report 2001

Other acceptable definitions of water-stressed areas include:

- "High water-stressed areas", as defined by the WBCSD Global Water Tool
- "High Risk" or "Extremely High Risk" areas, as mapped by WRI's Aqueduct Global Water Tool
- "High Risk" or "Extremely High Risk" areas, as mapped by Water Footprint Network

Data Requirements

Supporting evidence:

- The document(s) you attached will be used to verify the qualitative part of your response. If a question text field is available, a comprehensive answer in that field can be accepted instead of a supporting document. Any qualitative response that cannot be verified in the attached document(s) or via the information provided in the related question text field (if available) will not be accepted.
- Quantitative figures provided in the response do not need supporting evidence. You may still provide a reference using the reference clip. This could include examples of the underlying calculations or approaches to data aggregation used to compile the provided quantitative information.
- The supporting documents do not need to be available in the public domain.

References

GRI Standard 303-1 is relevant for this question.

Questionnaire

When considering physical water scarcity issues at a local level, please indicate what percentage of your company's production plants/sites are located in water-stressed areas and what percentage of cost of goods sold (COGS) these amounted to in the last fiscal year. **If COGS is not a relevant metric for your company, please leave that information blank.**

1. Yes, we systematically track and map our plant water usage with a comprehensive water tool taking into account *local* water stress. Please note that to be able to evaluate the other questions in this criterion, we expect clear evidence of your mapping in this question showing that the company is taking water stress into account at a local level.

	in water-stressed areas (e.g. <1700 m3/(person*year))
% of production plants in last FY *(mandatory)*	
% of Cost of goods sold (COGS) in last FY *(if applicable)*	

2. No, we do not systematically track and map our plant water usage at a local level.
3. Not applicable. According to our assessment and the above definition of water-stressed area, we currently have no productions plants/sites located in water-stressed areas. Please provide explanations in the comment box below.
4. Not known
