Question: People Analytics
Include Modeled Scores : Yes

People Analytics

Question

Does your company use any People Analytics (PA) in any of the following analysis

Rationale

People Analytics (also known as HR or Talent analytics) refers to the application of advanced analytics and use of large data sets in human capital management. Using the knowledge gained through analysis of human capital related data can help companies identify current risks and opportunities and make better informed decisions to improve talent management and eventually business performance. The main cases for which companies have started using analytics are employee performance measurement and workforce planning. Companies are also applying data to identify skills gaps, evaluate recruiting channels, screen candidates and assess talent supply and demand etc.

Asking about the use of People Analytics, i.e. collection and analysis of HR related data in order to draw insights (e.g. solving existing problems or capitalizing on new opportunities) doesn't suggest the dehumanization of the employer-employee relationship. On the contrary, it is proven that evaluating data that companies are already collecting might be useful to further improve employee experience, better inform employee training and development efforts, promote fair treatment of employees and eliminate bias.

Performance Summary	
Question Level Company Performance	0
Question Weight	5
Year-on-Year Change	0
Industry Average Score	57
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

People analytics: it is also known as HR, Talent or workforce analytics. It is the practice of collecting and analyzing Human Resources and organizational data through the application of statistics and other data interpretation techniques. The aim of this method is to transform this data into actionable insights that improve the company's systems, processes and strategies in order to achieve sustainable business success.

Strategic workforce planning: it is the long-term planning aiming at "the strategic alignment of an organization's human capital with its business direction. It is a methodical process of analyzing the current workforce, determining future workforce needs, identifying the gap between the present and the future, and implementing solutions so the organization can accomplish its mission, goals, and objectives." (Minnesota Management and Budget cited, HR Society 2013, p.3).

Types of Workforce planning:

- **Strategic planning**: long-range planning, usually covering a 3 to 5 year forecast period, aligned to business needs and outcomes. It focuses on identifying the workforce implications, current, transition and future of business strategic objectives and includes scenario planning.
- **Operational planning:** mid-range planning, usually covering the next 12 to 18 months. It should align with the timeframe of the business planning cycle. It is the process and systems applied to gathering, analyzing and reporting on workforce planning strategy.
- **Tactical or short-range planning:** it takes place once a year and is usually part of budgeting

Identify current workforce skill gaps: this practice should be considered as a part of the Strategic Workforce Planning (SWP) process. Some companies may identify current workforce skill gaps for operational reasons or for short-term planning, e.g. they may evaluate that they are currently more in need of employees with a specific programming knowledge and decide to open two positions in a specific year, without necessarily taking into consideration the more long-term planning and strategic direction.

Recruiting & hiring (e.g. evaluating recruiting channels, screening of candidates, assessing talent supply/demand): examples may include but are not limited to engaging assessments identifying successful candidates, use of external databases to evaluate talent pool, screening of internal databases to identify internal employees with relevant skills etc.

Identifying flight risks to improve retention: this refers to the process of identification of disengaged or dissatisfied employees with their current compensation, job or career prospects that may look elsewhere for new opportunities. These employees are deemed as high-risk employees to quit.

Competitive intelligence: Competitive Intelligence (CI) is the systematic collection and analysis of information from multiple sources, often used in marketing, product, and sales departments in order to understand a company's competitive landscape. In the Human Resource field, CI is used in developing human capital strategies, identifying related threats and opportunities and advancing organization's talent retention and acquisition efforts from industry information, company research, organizational charts, employee information, labor market information, and overall trends.

Organizational network analysis: Also known as Relational Analytics, Organizational Network Analysis (ONA) is a method for studying information flow, interaction and socio-technical networks within an organization. This technique creates statistical and graphical models of people, tasks, groups, knowledge and resources of organizational systems. It is based on social network theory and more specifically, dynamic network analysis. ONA is a growing trend in the field of People Analytics, especially around the concept of understanding diversity and inclusion, innovation, as well as employee performance and motivation.

Data Requirements

- Companies with fewer than 100 employees (e.g. investment offices and vehicles, funds, holding companies, etc.) should mark this question Not Applicable.
- Companies are not expected to make use of PA for all the type of analysis listed in the question. One option is sufficient to achieve maximum score in this question, if the supporting evidence and short description comment meet our requirements.
- It is possible that a company uses People Analytics for different cases that correspond to more than one of the options available. Please select all that apply, provide relevant supporting evidence and a short description.
- The analysis shared in this question do not need to apply to the whole company, it can also apply to a local/regional/segment/business unit.
- In this question, it is not required to share the actual data of your analysis but rather the analytical process that has been followed. The analysis can be qualitative, quantitative, predictive or perspective. For example, this question doesn't ask whether your company is measuring employee performance but rather whether any software, systems, real-time monitoring or other tools are used to collect and analyze this data in order to better evaluate employee performance.

Supporting evidence:

- Any type of supporting evidence that can demonstrate the type of analysis conducted is acceptable (e.g. screenshots of online systems, documents of application procedures, documentation of a successful application case, comprehensive comments).

Further details on supporting evidence:

- The document(s) you attached will be used to verify your response.

- The supporting documents do not need to be available in the public domain.
- If a question text field is available, a comprehensive answer in that field can be accepted instead of a supporting document.
- Any response that cannot be verified in the attached document(s) or via the information provided in the related question text field (if available) will not be accepted.

- People Analytics tools can be internally and/or externally developed (e.g. LinkedIn) but they should have an internal focus i.e. aiming to improve the company's systems, processes and strategies in order to achieve better talent management.
- Companies are not expected to have high-tech systems or platforms in place in order to conduct HR data analysis, use of simple tools (e.g. Excel) is also sufficient if they serve companies' analytical purposes.

- General statements that a company uses People Analytics are not acceptable.
- Evidence of the outcome of the analysis is welcome but not necessary. This information is necessary in the Strategic Workforce Planning question.
- Simple tracking of HR data and sharing of data sheets is not sufficient. This question doesn't seek evidence of simple data collection, but it focuses on understanding what type of data analysis has been conducted in order to identify issues or key areas of improvement in talent management.

Questionnaire

Does your company use any People Analytics (PA) in any of the following analysis? If yes, please select any practice that apply and provide a supporting evidence indicating the page number where the relevant information can be found and a comment in the reference field with a short description of how People Analytics is applied in your case.

Please note that companies are not expected to make use of PA in all the following analysis. For further clarifications, please consult the information text.

1. ○ Yes. Please select any relevant analysis that apply:
   1. ☐ Measuring employee performance
   2. ☐ Strategic workforce planning
   3. ☐ Identifying current workforce skills gaps
   4. ☐ Recruiting & hiring (e.g. evaluating recruiting channels, screening of candidates, assessing talent supply/demand)
   5. ☐ Identifying flight risks to improve retention
   6. ☐ Competitive intelligence
   7. ☐ Organizational network analysis
2. ○ No, our company does not use People Analytics.
3. ○ Not applicable. Please provide explanations in the comment box below.
4. ○ Not known
