Biodiversity Exposure & Assessment

Question

Does the company assess the sites used for its operational activities in order to identify sites with significant biodiversity impacts?

Rationale

The purpose of this question is to assess whether companies conduct periodic assessments of sites used for operational activities (e.g. production, extraction, plantation, or development activities) to determine the exposure to critical biodiversity. Companies that are exposed to critical biodiversity are expected to implement biodiversity management plans to protect and restore habitats.

Performance Summary	
Question Level Company Performance	40
Question Weight	30
Year-on-Year Change	40
Industry Average Score	22
Industry Highest Score	97

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Natural Capital: Is another term for the stock of renewable and non-renewable natural resources on earth (e.g., plants, animals, air, water, soils, minerals) that combine to yield a flow of benefits or "services" to people. These flows can be ecosystem services or abiotic services, which provide value to business and to society.

Ecosystem services: Are the benefits to people from ecosystems, such as timber, fiber, pollination, water regulation, climate regulation, recreation, mental health, and others.

Abiotic services: Are benefits to people that do not depend on ecological processes but arise from fundamental geological processes and include the supply of minerals, metals, and oil and gas, as well as geothermal heat, wind, tides, and the annual seasons.

Biodiversity: Is critical to the health and stability of natural capital as it provides resilience to shocks like floods and droughts, and it supports fundamental processes such as the carbon and water cycles as well as soil formation. Therefore, biodiversity is both a part of natural capital and also underpins ecosystem services.

Operational Activities: Includes any business activity which directly impacts natural capital through its own operations, or indirectly by depending on critical commodities in its supply chain. Such activities may include production, extraction, plantation, construction, power generation, transmission, or development activities.

Areas: Refers to land or any other natural environment which is used, owned, leased, operated, or permitted by the company

Biodiversity impact assessments: Defined as an evaluation exercise that involves identifying, measuring, quantifying, valuing the impacts on biodiversity of sites used for operational activities and/or areas in close proximity to these sites.

Measures at the level of species or populations are directed towards the attainment of an index of the number of species and their relative abundances within a given landscape (e.g. Mean Species Abundance).

Critical biodiversity: Also referred to in the criteria as 'Sites containing globally or nationally important biodiversity' and can include:

- Species classified as Critically Endangered, Endangered, or Vulnerable on the IUCN Red List, endemic species
- Internationally recognized areas: World Heritage sites, Ramsar Wetlands, UNESCO MAB
- Nationally important biodiversity can include legally protected areas, habitats, and species.

Companies are expected to have a position or commitment on biodiversity and the impact of their operations, even if they do not currently operate in sites containing globally or nationally important biodiversity.

Proximity to critical biodiversity: Sites which either contain (i.e. overlapping) or are adjacent (between 0 and 2km from nearest site) to critical biodiversity

Biodiversity Management Plans: Programs addressing threatened species and habitats and are designed to protect and restore biological systems.

Data Requirements

This question may be marked "Not applicable", if any of the factors below apply to your company. Please provide an explanation in the comment box at the end of the question:

- Your company only operates in urban environments AND is not dependent on ecosystem and/or abiotic services in its own operations
- Your company is only involved in operational activities which are not dependent on ecosystem and/or abiotic services

Supporting evidence: Additional credit will be granted for relevant evidence for at least one indicator covering each row. Further credit will be granted for information available in the public domain.

Each column must be completed

a) Overall

- The number of sites should include only those sites linked to operational activities such as the following: production, extraction, forestry plantations, or development.
- Company offices and premises should not be included in the count.

b) Assessment

- In this question, we are looking for assessments that are periodically conducted and can be an initial baseline or periodic re-assessment.
- The total area of sites assessed may include areas which are in close proximity to operational sites, and sites that are no longer used for operational activities. Sites that have since been sold may be excluded.
- **Data entered in row b) Assessment should not be greater than row a) Overall**

Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

c) Exposure

- **Data entered in row c) Exposure should not be greater than row b) Assessment**

d) Management Plans

- Sites used for operational activities may only be partially covered by biodiversity management plans. Please only indicate the area which is covered by such a management plan.
- **Data entered in row d) Management plans should not be greater than row c) Exposure**

Industry-Specific Guidance

Utilities (ELC, GAS, MUW):

- Utilities that have no power generation or transmission business or are only in electricity/gas distribution should mark Not Applicable.
- MUW industry: Pure water utilities should mark Not Applicable.
- Areas flooded for hydropower generation can only be excluded from the count if the artificial water body has already existed for more than 10 years.
- Transmission lines or gas pipelines should not be counted as "sites", but should be included in the "hectares" column (please use an appropriate geometrical projection - e.g. length of line x width of line).

Real Estate (REA) and Homebuilding (HOM):

- We are looking for the number of properties in your portfolio or ongoing projects currently in development.

Questionnaire

Has your company assessed its own operations to determine its level of exposure to biodiversity in the areas used for operational activities and the potential impacts on that biodiversity?

1. Yes, we have assessed our sites for biodiversity importance.

   Please complete each row of the table below and provide supporting documents. See *Additional information and question guidance* for further information.

	Number of sites	Area (Hectares)	Supporting evidence
a) Overall What is the total number of sites and the total area used for operational activities?			
b) Assessment Have you conducted biodiversity impact assessments for sites used for operational activities in the past five years?			
c) Exposure Of the sites assessed in the past five years, how many sites are in close proximity to critical biodiversity, and what is the total area of these sites?			
d) Management plans Of those sites in close proximity to critical biodiversity, how many sites have a biodiversity management plan, and what is the area covered by these biodiversity management plans?			

2. No, we have not conducted any assessments in the past five years
3. Not applicable. Please provide explanations in the comment box below
4. Not known
