Hiring

Question

Does the company track the total number of new employee hire rates and the percentage of open positions filled by internal candidates?

Rationale

Employees are one of the most important intangible assets for companies. The ability to attract qualified and talented employees, as well as retain and nurture internal talents is pivotal for corporate success. Companies focused on attracting the best talents should not forget about their internal talents who have grown with the company, understand the organization, its mission and culture. Companies need to build organized internal career mobility processes to retain talents and reduce external hiring costs. This question asks for the number of new employee hires, the percentages of positions filled by internal candidates, the hiring cost, and data breakdown by age, gender, race/ ethnicity and management level.

Performance Summary	
Question Level Company Performance	65
Question Weight	10
Year-on-Year Change	(5)
Industry Average Score	24
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

FTEs: Full-Time Equivalents is the number of working hours that represents one full-time employee during a fixed time period, such as one month or one year. The concept is used to convert the hours worked by several part-time employees into the hours worked by full-time employees.

Total number of new employee hires: refers to the number of new full-time equivalents (FTEs) hired in the reporting year. It should not include internal candidates i.e. existing employees that have been hired in different positions or internally promoted.

Percentage of open positions filled by internal candidates (or internal hires or promotions): refers to the total number of open positions filled by a company's own employees divided by the total number of vacancies in the company in the reporting year. This metric provides a mean of determining the effectiveness of human capital development by providing employees with the skills required for promotion, and it also demonstrates how proactive organizations are in providing their employees with new challenges for growth and development throughout their careers.

Average hiring cost/FTE: refers to the average cost of hiring a new full-time equivalent (FTE) in the reporting year. This figure should be calculated based on the costs of hiring all new FTEs in the reporting period and not based on the costs of hiring FTEs who were already at the company before the last fiscal year started. The average hiring cost includes internal and external recruiting cost e.g. recruiter salaries, interviews, agency fees, advertising, job fairs, travel and relocation costs.

Data Requirements

- Companies with fewer than 100 employees (e.g. investment offices and vehicles, funds, holding companies, etc.) should mark this question Not Applicable.

Disclosure requirements: Additional credit will be granted for relevant publicly available evidence covering the following aspect of this question, for at least the most recent reported year.

- Total number of new employee hires
- Percentage of open positions filled by internal candidates (internal hires)

IMPORTANT if you are prefilling data from previous assessments: Please note that for technical reasons, the data from the fiscal year 2019 is being prefilled in all 4 years for the "percentage of open positions filled by internal candidates" and the "average hiring cost/FTE". Please make sure to review the prefilled data and update it accordingly for each fiscal year. Duplicated data which is not supported by an explanation in the comment box will be removed.

Data breakdown:

- We don't expect companies to break down the data by all the categories mentioned in the question, but full points will be granted for this section for having a breakdown for at least 2 categories. The purpose of this section is to assess whether companies are able to track these metrics in a way to be able to evaluate and reassure fair treatment of all employees.
- In Europe, according to the **Article 9 of the GDPR**, it is prohibited to process personal data revealing racial or ethnic origin, except if the data subject has given explicit consent to the processing of those personal data, provided this is not prohibited by national law. Other exemptions exist, such as reasons of substantial public interest which might include statistical research purposes for equality of opportunity and treatment. We therefore expect companies to report on **only two different categories,** in order to not penalize companies that do not report data breakdown on race.
- For this section, companies can attach either private or public evidence and we expect to see the specific quantitative data broken down by these categories

Employee hires data breakdown by management level	-
Employee hires data breakdown by race, ethnicity, nationality, country of origin or cultural background	-

Questionnaire

Please indicate the total number of new employee hire rates and the percentage of open positions filled by internal candidates. Please also report the average hiring cost/FTE for the last fiscal year.

Please note: The average hiring cost/FTE should specifically relate to the number of employees hired last year, not average cost for all employees.
