Question: Exposure of Suppliers to Water Risks
Include Modeled Scores : Yes

Exposure of Suppliers to Water Risks

Question

Does the company systematically track and map the exposure of its suppliers to water-related risks with a comprehensive water tool taking into account local physical water risks?

Rationale

Understanding water-related risks is not only important for companies' own operations, but also for those of their suppliers. With this question, we assess if companies have analyzed what proportion of their commodities are sourced from water stressed areas. This assessment can help companies better understand the resilience of their supply chains and to better mitigate these risks.

Performance Summary	
Question Level Company Performance	100
Question Weight	15
Year-on-Year Change	0
Industry Average Score	55
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Critical suppliers: are defined by us as suppliers goods, materials, services (including intellectual property (IP) / patents) have a significant impact on the competitive advantage, market success or survival of the company. Critical suppliers include high-volume suppliers, suppliers of critical components and non-substitutable suppliers.

Tier 1 suppliers: refers to suppliers that directly supply goods, materials or services (including intellectual property (IP) / patents) to the company.

Water Stress: When withdrawals are greater than 20% of total renewable resources, water stress often is a limiting factor on development; withdrawals of 40% or more represents high stress. Similarly, water stress may be a problem if a country or region has less than 1,700 m3 yr-1 of water per capita (Falkenmark and Lindh, 1976)." Source: IPCC Report 2001

Other acceptable definitions of water-stressed areas include:

- "High water-stressed areas", as defined by the WBCSD Global Water Tool
- "High Risk" or "Extremely High Risk" areas, as mapped by WRI's Aqueduct Global Water Tool
- "High Risk" or "Extremely High Risk" areas, as mapped by Water Footprint Network
- Environmental Flow smaller than 40%, as mapped by UN FAO https://www.unwater.org/sites/default/files/app/uploads/2019/01/SDG6_EF_LOW2.pdf

Agricultural commodities: refers to sourced crops or agriculturally-based inputs that are integrated in the company's core business.

Non-exhaustive list of agricultural commodities: wheat, cotton, flax, corn, dry beans, oats, barley, rye, tobacco, rice, peanuts, soybeans, sugar beets, sugar cane, tomatoes, grain sorghum, sunflowers, raisins, oranges, sweet corn, dry peas, freezing and canning peas, forage, apples, grapes, potatoes, industrial hemp, timber and forests, nursery crops, citrus, and other fruits and vegetables, nuts, tame hay, native grass, aquacultural species including, but not limited to, any species of finfish, mollusk, crustacean, or other aquatic invertebrate, amphibian, reptile, or aquatic plants.

Data Requirements

Supporting evidence should evidence of tools or databases used to measure supply chain water risks, water risk assessments, supplier audits or assessments that specifically cover water risks. General supply chain assessments, audits or certifications that do not clearly show evidence that water was included are not acceptable as supporting evidence.

Supporting evidence:

- The document(s) you attached will be used to verify your response.
- The supporting documents do not need to be available in the public domain.
- If a question text field is available, a comprehensive answer in that field can be accepted instead of a supporting document.
- Any response that cannot be verified in the attached document(s) or via the information provided in the related question text field (if available) will not be accepted.

Dropdown exposure based on CDP on Cotton	Not answered
Dropdown exposure based on CDP on Other	Not answered

Questionnaire

Does your company know how exposed your critical tier 1 suppliers are to water-related risks? If so, please indicate what percentage of your company's agricultural commodities originate from water-stressed areas and what percentage of cost of goods purchased or acquired (COGA) these amounted to in the last fiscal year. If COGA is not a relevant metric for your company, please leave that information blank.

1. (•) Yes, we systematically track and map our supply chain water risks exposure with a comprehensive water tool taking into account local physical water risks. Please note that to be able to evaluate the other questions in this criterion, we expect clear evidence of your mapping in this question showing that the company is taking water stress into account for its supply chain

    1. [x] Evidence that supplier assessment meets S&P Requirements

    % of sourced agricultural commodities originating from water-stressed areas (e.g. <1700 m3/(person*year) or high, very high and severe) (mandatory)

Cattle products	Please select
Maize	Please select
Palm Oil	1-10%
Rice	Please select
Soy	Please select
Sugar	1-10%
Tobacco	Please select
Cotton	Please select
Other, please specify	Please select

    Not answered

    % of Cost of goods purchased in last FY (if applicable)

2. ( ) We do not measure the exposure of our critical tier 1 suppliers to water-related risks

3. ( ) Not applicable. Please provide explanations in the comment box below.

4. ( ) Not known
