Water Consumption in Water-Stressed Areas

Question

Does the company track its freshwater consumption in water-stressed areas?

Rationale

Water is becoming a scarcer resource, especially for companies and communities located in water-stressed areas. Water consumption in water-stressed areas can have an impact on local communities, leading to inadequate water access, poor sanitation and disease. This can also impact local ecosystems and agriculture, which remain dependent on water systems to thrive. Whilst climate change has played a major role in weather patterns and consequently, water availability, it is vital that companies recognize when their operations are contributing to levels of water stress. With the current rate of consumption, it is expected that by 2025, two-thirds of the world may face water shortages. Therefore, the purpose of this question is to understand how water-intensive companies' operations in water-stressed areas are performing in reducing their water consumption.

Performance Summary	
Question Level Company Performance	38
Question Weight	10
Year-on-Year Change	0
Industry Average Score	19
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Total net freshwater consumption: Municipal water supply + Fresh surface water + Fresh ground water - Water returned to the source of extraction at similar or higher quality as raw water extracted. Please do not include salt or brackish water into the reported figures. Rainwater collected and wastewater should not be reported. Please, report only the consumption of facilities located in water stressed areas according to your mapping (e.g. <1700 m3/(person*year))

Total municipal water supplies: All water supplied directly by the municipality and/or other public or private water utilities.

Fresh surface water (lakes, rivers, etc.): It includes water from wetlands, rivers, lakes. Do not include sea water.

Fresh ground water: Fresh water from below the surface. Do not include brackish ground water

Water quality: To define the levels of water quality, we consider the quality categorization of the Minerals Council of Australia (MCA) as a good approach to be followed:

- Category 1: Water is of a high quality and may require minimal and inexpensive treatment (for example water disinfection and pond settlement of solids) to raise the quality to appropriate drinking water standards.
- Category 2: Water is of a medium quality with individual constituents encompassing a wide range of values. It would require moderate level of treatment such as disinfection, neutralization, removal of solids and chemicals to meet appropriate drinking water standards.
- Category 3: Water is of a low quality with individual constituents encompassing high values of total dissolved solids, elevated levels of dissolved metals or extreme levels of pH. It would require significant treatment to remove dissolved solids and metals, neutralize and disinfect to meet appropriate drinking water standards.

Water stress: "When withdrawals are greater than 20% of total renewable resources, water stress often is a limiting factor on development; withdrawals of 40% or more represents high stress. Similarly, water stress may be a problem if a country or region has less than 1,700 m3 yr-1 of water per capita (Falkenmark and Lindh, 1976)." Source: IPCC Report 2001

Other acceptable definitions of water-stressed areas include:

- "High Risk" or "Extremely High Risk" areas, as mapped by WRI's Aqueduct Global Water Tool
- "High Risk" or "Extremely High Risk" areas, as mapped by Water Footprint Network
- "High Risk" or "Very High Risk" areas, as mapped by WWF Water Risk Filter https://riskfilter.org/water/explore/map
- Environmental Flow smaller than 40%, as mapped by UN FAO https://www.unwater.org/sites/default/files/app/uploads/2019/01/SDG6_EF_LOW2.pdf

Data Requirements

Disclosure requirements for partially public question.

Additional credit will be granted for relevant publicly available evidence covering the following aspect of this question:

- Total net freshwater consumption in water-stressed areas for at least the most recent reported year.

Third-party verification: For third-party verification, we expect that data in the most recent year reported has been third-party verified and that relevant documentation is attached showing this verification. Internal audits or verification will not be considered.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
The company tracks their water consumption in water-stressed areas. (Million m^3)	Applicable
Total net freshwater consumption in water-stressed areas (Total water withdrawals – Total water discharges) (2019) (Million m^3)	Not answered
Total net freshwater consumption in water-stressed areas (Total water withdrawals – Total water discharges) (2020) (Million m^3)	Not answered
Total net freshwater consumption in water-stressed areas (Total water withdrawals – Total water discharges) (2021) (Million m^3)	Not answered
Total net freshwater consumption in water-stressed areas (Total water withdrawals – Total water discharges) (2022) (Million m^3)	2.977
Water Use Coverage (2019)	Not answered
Water Use Coverage (2020)	Not answered
Water Use Coverage (2021)	Not answered
Water Use Coverage (2022)	100
Water target for last fiscal year reported (Million m^3)	0.125
The reported data for water consumption in water-stressed areas is publicly available.	YES
The reported data for water consumption in water-stressed areas has been third-party/externally verified.	-
Data Consistency	-
Reduced Coverage	-
The reported data for water consumption in water-stressed areas is normalized.	-
Figures reported do not match according to the definition provided (water withdrawn, net of water discharged to the source with higher or equal quality).	-

Questionnaire

Please provide your company's total net freshwater use for the part of your company's operations located in water-stressed areas and for which you have a reliable and auditable data acquisition and aggregation system. Please refer to the information button for additional clarifications. Please ensure that you have correctly filled in the Company Information section at the beginning of the questionnaire, and that the coverage in the table below is related to the denominator relevant for your company as indicated in that section. Please note that "data coverage" must not be misunderstood as the company's exposure to water stress as the latter one is asked already in another question. As an example, if 20% of your company's operations are exposed to water stress, please report the total net freshwater consumption at these 20% of sites for the past four years and put "data coverage" to 100%.

1. ●

Water consumption in areas with water stress (e.g. <1700 m3/(person*year)	Unit	FY 2019	FY 2020	FY 2021	FY 2022	What was your target for FY 2022
Total net freshwater consumption in water-stressed areas (Total water withdrawals – Total water discharges)	million cubic meters	Not answered	Not answered	Not answered	2.977414	.12500578
Data coverage (as % of denominator)	percentage of:	Not answered	Not answered	Not answered	100	

PUBLIC REPORTING

1. ☑

Our data is publicly available. Please provide supporting evidence or web link.

THIRD-PARTY VERIFICATION

1. ☐

Our data has been third-party verified in the most recent financial year reported. Please provide supporting evidence.

DATA CONSISTENCY

1. ☐

We report publicly on this information, but the data in the table above differs from our publicly reported figures. Please provide an explanation in the comment box for this difference

1. ☐

We have a temporary coverage reduction or target challenge due to corporate actions. Please briefly explain if a merger, acquisition, divestment, etc. has temporarily caused a reduction in your ability to report optimal coverage or caused your target to appear abnormal

1. ☐

We are not able to report this information in absolute terms, the information provided in the table above is normalized data. For the purpose of this question, please always provide absolute figures if available.

1. ☐

The figures provided in the table above are NOT reported according to the definition provided (water withdrawn, net of water discharged to the source with higher or equal quality).

2. ○

We do not track water use.

3. ○

Not applicable. Please provide explanations in the comment box below.

4. ○

Not known
