Risk Governance

Question

Does the company have governance mechanisms in place to oversee risks?

Rationale

For a company's risk management procedures to be effective, risk awareness, concern, and management have to stem from the company's senior management and board of directors. While overall responsibility for risk management lies with the board of directors, it is the senior management team's duty to translate the strategic direction set by the board into appropriate policies and procedures and to put in place an effective means of executing and implementing those policies. To ensure that the policies are consistent with the risk tolerance of the company's shareholders, they should be approved by the board.

Performance Summary	
Question Level Company Performance	0
Question Weight	30
Year-on-Year Change	(60)
Industry Average Score	21
Industry Highest Score	90

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

Highest responsible person or committee: Under the highest responsible person or committee, the name and position of the person or body with the respective responsibilities should be indicated. Examples of responsible people or committees include Chief Risk Officer, Risk Committee, Internal Audit, and Chief Compliance Officer. Given that the CEO has ultimate responsibility for all aspects of a company's operations, CEO is not accepted here.

Risk management responsibility: Here, companies should enter the highest-ranking individual or body in the organization that is responsible for determining the appropriate risk appetite or tolerance level of the organization, which in most cases would be the Chief Risk Officer or the highest-ranking committee in the company responsible for risk management. Risk appetite can be defined as "the amount and type of risk that an organization is willing to take in order to meet its strategic objectives." Organizations will have different risk appetites depending on risk categories as well as their industry, culture, and objectives.

Risk monitoring & auditing responsibility: This is needed to ensure policies are carried out and processes are executed in accordance with management's selected performance goals and risk tolerances. Here, the highest-ranking individual or committee responsible for monitoring risk should be provided. This could be an internal audit or any comparable function ensuring an independent assurance that practices are consistent with the company's risk strategy and policies.

Reporting Line: As part of reporting line, the whole reporting line from the responsible persons or committee up to the executive managers or board of directors should be provided.

Expertise: For the option of expertise in (enterprise) risk management for non-executive directors, it is not expected that a large number of board members would have such experience. However, it is considered beneficial to have at least some members on the board with risk management experience. In many non-financial industries, this would be someone who has worked in operational risk management. It could also mean someone with a finance background who has worked in financial risk assessment. Experience on a risk-related board committee alone is not acceptable; rather, the focus is on professional experience that relates to risk management.

Regular education: This relates to risk-specific education & training provided to non-executive directors, ensuring that they are informed about the latest-risk management practices and are equipped to assess various forms of risks. Regular refers to education or training that occurs consistently and belongs to the company's scheduled training mechanisms for board members.

Structural independence: This means that the organization's risk function is independent of other business functions, departments, or divisions, and serves as a means to address risks throughout the entire organization and not just within a specific department (for example, if the risk management function is a separate reporting pillar altogether or reports directly to the CEO). Structural independence allows for objective monitoring and control of various risks, in the best interest of the entire organization and without the pressure of a potential conflict of interest coming from other business priorities.

Disclosure Requirements

- The document(s) you attached will be used to verify your response. The supporting documents need to be available in the public domain.
- Any response that cannot be verified in the attached document(s) or via the information provided in the related question text field (if available) will not be accepted.
