Year: Methodology Year: 2024
Question: Energy Consumption
Include Modeled Scores : Yes

Energy Consumption

Question

Does the company track its energy consumption?

Rationale

In the last century, there has been an unprecedented increase in the use of natural resources and materials. Producing more with less material is essential for many industries affected by the increasing scarcity of natural resources. Resource efficiency and circularity can enhance companies' competitiveness through reduced costs and environmental liabilities. It can also mean companies are better prepared for future environmental regulations. In this question, we are capturing the total non-renewable and total renewable energy consumption, assessing the overall trend of consumption, as well as the target set for the current financial year.

Performance Summary	
Question Level Company Performance	90
Question Weight	50
Year-on-Year Change	0
Industry Average Score	46
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Total non-renewable energy consumption: This is the sum of non-renewable consumption of fuel (excluding feedstocks), consumption of non-renewable purchased or acquired electricity, and consumption of non-renewable purchased or acquired heat, steam and cooling.

Total renewable energy consumption: This is the sum of consumption of renewable fuel (excluding feedstocks), consumption of renewable purchased or acquired electricity, consumption of renewable purchased or acquired heat, steam and cooling and consumption of self-generated non-fuel renewable energy.

Renewable energy: This is energy taken from sources that are inexhaustible such as wind, solar, hydropower, geothermal, biomass and marine (tidal and wave energy), as defined in the GHG Protocol. Please note hydrogen should not be included if it is derived from fossil fuels. Similarly, waste energy should not be included if it is derived from fossil fuels.

Non-Renewable energy: This is all energy not identified as deriving from renewable sources, e.g., coal, oil, natural gas, etc. Please note that blended fuels deriving from both renewable and non-renewable sources should be split by the proportion contained from each source. Nuclear energy is not considered as renewable energy and should be reported under total non-renewable energy. Please note that direct consumption of nuclear fuel should not be included. Fuels (excluding nuclear) should be covered, including fleet fuel. Consumption of purchased or acquired electricity, steam heat, and/or cooling from nuclear sources should be included.

Self-generated non-fuel renewable energy: If your organization produces renewable energy that is not based on fuel (such as solar, wind, hydro, geothermal, marine), then any consumption of this energy should be entered under total renewable energy. All forms of non-fuel renewable energy, electricity, heat, steam, or cooling should be included under total renewable energy.

Excluding feedstocks: Fuels consumed as feedstocks are fuels that are not combusted for energy purposes. All fuel consumed for energy purposes inside the organizational boundary should be included, regardless of whether the fuel was purchased or produced by the organization. If a fuel is consumed as a feedstock for the production of another fuel, then the feedstock should not be included, but combustion of the produced fuel should be included. Ultimately, if a fuel is combusted, i.e., consumed for energy purposes and not as a feedstock, then it should be included. For example, naphtha and ethane are feedstocks that may be converted into petrochemical products such as ethylene, and should not be included. The steel industry is a special case because coke and fuel injectants consumed at the blast furnace serve as feedstocks and a source of energy. These fuels are considered feedstocks and should not be counted.(Such as coke used as a reducing agent)However, all fuels consumed for energy, i.e., combusted, that are derived from fuel feedstocks, e.g., blast furnace gas, should be counted.

This table is for gross energy consumption data only. You should not provide net consumption nor deduct for energy produced or exported from the organizational boundary. Because feedstock fuels are excluded from this question, this approach should not lead to double counting. Companies shall use the total—or gross—electricity purchases from the grid rather than grid purchases "net" of generation for the scope 2 calculation. A company's total energy consumption would therefore include self-generated energy (any emissions reflected in scope 1) and total electricity purchased from the grid (electricity). It would exclude generation sold back to the grid.

Purchased or acquired electricity, steam, heat, cooling:

- This includes the consumed electricity, heat, steam, and/or cooling that was purchased or acquired, i.e., brought into the organizational boundary. This excludes the consumption of electricity, heat, steam, or cooling that was produced by the organization, i.e., from inside the organizational boundary. It also excludes purchased or acquired electricity, heat, steam, or cooling that is not consumed inside the organizational boundary. Purchased or acquired electricity, heat, steam, or cooling that is wasted should still be counted as consumption.
- Purchased or acquired electricity, steam, heat, and cooling are aligned with the boundary for scope 2 emissions. The consumption of fuel (excluding feedstocks) should be entered if the fuel was consumed inside your organizational boundary in the last fiscal year and is aligned with the boundary for scope 1 emissions. Therefore, in this question, we would like to capture your energy consumption for scope 1 and scope 2.
- Specific information on these energy carriers can be found in section 5.3.1 and Appendix A of the GHG Protocol Scope 2 Guidance.
- The terms "purchased" and "acquired" are used when your organization has received the energy from a third party. This rules out energy that is sourced from within the organizational boundary. It should be noted that purchased or acquired heat does not include the heat content, or calorific value, of fuels that are purchased or acquired by the organization. This is accounted for at the point of fuel consumption, which falls inside the Scope 1 boundary. You should also be aware that steam, heat or cooling received via direct line as "waste" from a third party's industrial processes, should still be accounted for if it is consumed.
- If your organization produces renewable energy that is not based on fuel (such as solar, wind, hydro, geothermal, marine), this energy consumption should be included in total renewable energy consumption. Consumption of renewable fuels (such as solid and liquid biofuels and biogas) also should be included. All forms of non-fuel renewable energy - electricity, heat, steam, or cooling – shall be included under non-renewable energy.

Leased Assets: Guidance for how to handle leased assets and spaces can be found on page 36 of the GHG Scope 2 Protocol, (5.2.1).

Renewable Energy Credits: These should fall under MWh from renewable sources. RECs, RECs from Power Purchase Agreements, energy attribute certificates, contractual instruments, TIGRs, and unbundled certificates should be reflected under MWh from renewable sources.

Units and conversion:

- The most common unit for electricity is Watt-hours. 1 MWh is equal to 1,000,000 Watt-hours, which is equal to 1,000 kWh (kilo-Watt-hours).
- If your raw data is in energy units other than MWh, such as Giga-Joules (GJ) or British Thermal Units (Btu), then you should convert to MWh. For example, 1 Giga-Joule (GJ) = 0.277778 MWh, so if your data is in GJ then you should multiply your data by 0.277778. If your data is in million Btu, then you need to multiply your data by 0.29307.
- Conversion factors from other energy units are available from a variety of online calculation tools, including from IEA and OnlineConversion.com, or from conversion tables such as those in EPA AP-42 (Annex A).
- If your raw data is in volume units, e.g., cubic feet or gallons, or in mass units, e.g., kilograms (kg) or pounds (lb), then you should convert to energy units using factors for fuel heating/calorific values. These are available from numerous sources, some of which are listed below:

IPCC Guidelines for National GHG Inventories (Volume 2, Table 1.2, p1.18-1.19)

EPA AP-42 (Annex A)

IEA Statistics Manual (Annex 3, p180-183)

API Compendium (Table 3-8, p3.20-3.21)

- If your raw data for steam is in physical units, such as pounds (lb) or kilograms (kg), then you should convert to energy units. The energy content of steam varies with temperature and pressure. Organizations can refer to The Climate Registry's General Reporting Protocol, Chapter 15, section 15.2, step 1, which explains how to calculate the energy content of steam.
- Cooling is frequently purchased in refrigeration-ton hours; 1 ton-hour is equal to 12,000 Btu, which is equally to 0.003516 MWh.

Data Requirements

Disclosure requirements for partially public questions. Additional credit will be granted for relevant publicly available evidence covering the following aspect of this question:

- Total non-renewable energy consumption for at least the most recent reported year.

Third-party verification: For third-party verification, we expect that data in the most recent year reported has been third-party verified and that relevant documentation is attached showing this verification. Internal audits or verification will not be considered.

Please note: In case the company **has reported a value of zero** in the table, third-party verification or supporting evidence is required (e.g., comprehensive comment, internal documentation or public reporting) to substantiate the zero reported.

For this question, we encourage you to provide evidence that is publicly available and may grant additional credit for publicly available evidence.

Please note: In cases where the company is classified within the **Banks (BNK)**, **Financial Services (FBN)**, **Insurance (INS)**, or **Professional Services (PRO)** industries, the score obtained in this question will not contribute to the final score of the company.

Standards & Frameworks

CSRD - E1-5 37(a) AR 33-AR 35, E1-5 37(b) AR 33-AR 35, E1-5 37(c)i, E1-5 37(c)ii, E1-5 38 c AR 33, E1-5 38(a) AR 33, E1-5 38(b) AR 33, E1-5 38(d) AR 33, E1-5 38(e) AR 33, ESRS 2 MDR-T 80j AR 24 - AR 26

EDCI - Renewable energy consumption, Total energy consumption

ESG Disclosure Standards (China) - E.1.3.2 Non-renewable energy consumption

GISD - Renewable energy consumption as percentage of total energy consumption

GRI Disclosure - 2-5, 302-1

IRIS+ - OD4091, OI1495, OI1496, OI2496, OI3324, OI8825, OI9624

UNGC Questionnaire - E10, E4, E4.1

WEF Metrics - Resource circularity

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Energy Consumption: selection list type	Applicable
Total renewable energy (wind, solar, biomass, hydroelectric, geothermal, etc.) purchased or generated (D) (2020) (MWh)	854,287.000
Total renewable energy (wind, solar, biomass, hydroelectric, geothermal, etc.) purchased or generated (D) (2021) (MWh)	1,065,446.000
Total renewable energy (wind, solar, biomass, hydroelectric, geothermal, etc.) purchased or generated (D) (2022) (MWh)	1,258,210.317
Total renewable energy (wind, solar, biomass, hydroelectric, geothermal, etc.) purchased or generated (D) (2023) (MWh)	1,442,716.000
Energy Consumption: Total non-renewable energy consumption (2020) (MWh)	564,565.000
Energy Consumption: Total non-renewable energy consumption (2021) (MWh)	391,008.000
Energy Consumption: Total non-renewable energy consumption (2022) (MWh)	219,927.436
Energy Consumption: Total non-renewable energy consumption (2023) (MWh)	131,765.300
Target for total non-renewable energy consumption for last fiscal year reported (MWh)	Not answered
Energy Consumption: Energy: Data coverage (2020)	100
Energy Consumption: Energy: Data coverage (2021)	100
Energy Consumption: Energy: Data coverage (2022)	100
Energy Consumption: Energy: Data coverage (2023)	100
Public reporting: Energy consumption data is publicly available	YES
Energy Consumption: Third party verification: Non-renewable energy consumption data verified by third party for most recent FY	-
Energy Consumption: Data consistency: Non-renewable energy consumption data reported above differs from publicly available data	-

Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

QUESTION LEVEL INPUT	COMPANY ANSWER
Energy Consumption: Data consistency: Temporary coverage reduction or target challenge in non-renewable energy consumption data due to corporate actions	-
Energy Consumption: Data consistency: Non-renewable energy consumption data not reported in absolute terms and is normalized	-

Questionnaire

Please complete the following table about total energy consumption. For each row in the table, it is mandatory that the values provided are in the same unit. Please see the Information Button for definitions of the cost options. Also, please ensure that you have correctly filled in the Company Information section at the beginning of the questionnaire, and that the coverage in the table below is related to the denominator relevant for your company as indicated in that section.

1. (●)

Total energy consumption	Unit	FY 2020	FY 2021	FY 2022	FY 2023	What was your target for FY 2023?
Total non-renewable energy consumption	MWh	564565	391008	219927.436	131765.3	Not answered
Total renewable energy consumption	MWh	854287	1065446	1258210.317	1442716	
Data coverage (as % of denominator)	percentage of:	100	100	100	100	

PUBLIC REPORTING

1. ☑ Our data is publicly available. Please provide supporting evidence or web link.

THIRD-PARTY VERIFICATION

1. ☐ Our data has been third-party verified in the most recent financial year reported. Please provide supporting evidence.

DATA CONSISTENCY

1. ☐ We report publicly on this information, but the data in the table above differs from our publicly reported figures. Please provide an explanation in the comment box for this difference:
2. ☐ We have a temporary coverage reduction or target challenge due to corporate actions. Please briefly explain if a merger, acquisition, divestment, etc. has temporarily caused a reduction in your ability to report optimal coverage or caused your target to appear abnormal:
3. ☐ We are not able to report this information in absolute terms, the information provided in the table above is normalized data. For the purpose of this question, please always provide absolute figures if available.
2. ○ No, we do not track energy consumption.
3. ○ Not applicable. Please provide explanations in the comment box below.
4. ○ Not known

Confidential additional comments

Use the text field below only in the following cases: (i) to describe significant changes in data or calculation methodology compared to last year's submission, (ii) to explain why a question is not applicable to your company's business model, (iii) to explain if your data deviates from the unit or format requested, or (iv) to provide supporting notes on translations of non-English references.
