Energy Management Programs

Question

Does the company have programs on energy management?

Rationale

By integrating energy management programs into business practice, companies can establish a robust process to continuous improvement of energy performance. Energy performance is a concept which is related to energy efficiency, energy use and energy consumption. By improving energy performance and associated energy costs, companies can improve their competitiveness. In addition, improving energy performance leads to meet climate change mitigation goals by reducing their greenhouse gas emissions.

Successful implementation of energy management programs supports a culture of energy performance improvement that requires a commitment from all levels of the organization, especially top management. This involves cultural changes within the entire organization.

This question identifies the set of actions that ensure a robust, credible and reliable energy management program. It aims to provide a systematic, data-driven and facts-based process, focused on continually improving energy performance that can transform the way companies manage energy use and energy consumption.

Performance Summary	
Question Level Company Performance	68
Question Weight	50
Year-on-Year Change	0
Industry Average Score	44
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Energy audits: Process that analyzes energy efficiency, energy use and energy consumption based on data and evidence. This process allows firms to determine areas of significant energy use and identify opportunities for improving energy performance.

Quantified targets: Objectives with specific, measurable and quantifiable energy performance improvement targets to reduce the company's energy consumption (e.g., reduce electricity consumption by 3% by the end of the year, 2% plant efficiency improvement by the fourth quarter). Although emissions reduction targets can be a result of energy efficiency measures, this question solely covers energy consumption reduction targets.

Actions to reduce the amount of energy used: Concrete and targeted actions focused on reducing energy consumption. These can include modification or renovation of facilities (e.g., warehouses, factories, offices), equipment (e.g., engines, boilers), systems (e.g., lighting, steam, transport) and energy-using processes, or qualitative objectives related to people energy behavior, cultural change or operation of the systems and equipment responsible for substantial energy consumption.

Evaluation of progress in reducing energy consumption: Comparison of performance before and after the implementation of action plans.

Clean energy: The type of energy that does not release pollutants into the air.

Green energy: Resources that come from natural sources, such as the sun. Renewable energies are both clean and green energy since they come from sources that are constantly being replenished, such as hydropower, wind power or solar energy. Although these measures do not represent an energy performance improvement per se, the consumption of renewable energy has positive environmental effects, hence off-site renewable energy is accepted.

Innovation or research and development to decrease energy consumption: Procedures to consider improvement opportunities and operational control in the design of new, modified and renovated facilities; equipment; systems; and energy-using processes: considering energy performance in the design of facilities, equipment, systems or energy-using processes within the scope and boundaries of the company and considering on-site renewable energy production and less-polluting types of energy options for new facilities, improved technologies and techniques.

Energy efficiency training: Training focused on raising awareness within the company's personnel to optimize energy behavior and lead to cultural change aiming to reduce energy consumption.

Disclosure Requirements

This question requires supporting evidence from the public domain. The information provided has to be included in your public reporting (e.g., annual report, sustainability report, integrated report, company publications) or corporate website.

Any response that cannot be verified in the attached public document(s) will not be accepted.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Public availability of company's energy management programs	Applicable
The process of identification of energy types and to identify opportunities for improving energy performance.	-
Objectives with specific, measurable and quantifiable energy performance improvement targets for energy performance improvement	-
Actions with qualitative objectives related to energy behavior or cultural change	YES
Process to compare energy performance before and after the implementation of action plans and other actions.	YES
Renewable energy use (Clean & Green energy)	YES
Innovation Investments or R&D for energy performance	YES
Energy efficiency training provided to employees to raise awareness and reduce energy consumption.	YES

Questionnaire

Does the company have energy management programs and are they available publicly?

1. (•) Yes, the company has energy management programs that cover the following elements. Please indicate where this information is available in **public reporting or corporate website.**
    1. ☐ Energy audits to identify opportunities for improving energy performance
    2. ☐ Quantified targets to address energy savings

Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

3. ☑ Actions to reduce the amount of energy use
4. ☑ Evaluation of progress in reducing energy consumption
5. ☑ Use of clean or green energy
6. ☑ Investments in innovation or R&D to decrease energy consumption
7. ☑ Energy efficiency training provided to employees to raise awareness of energy consumption reduction

2. ○ No, the company does not publicly report on energy management programs.
3. ○ Not applicable. Please provide explanations in the comment box below.
