Information Security Governance

Question

Does the company have governance mechanisms to oversee its information security activities?

Rationale

Due to the current trend of digitization, including but not limited to cloud computing, online marketplaces, and payments, etc., it is crucial that access to networks, IT systems, and data is assured at all times. As a result, lower than agreed upon system performance or service disruptions can result in higher costs and reputational risk for companies. The main risks stem from technical failure, human error, malicious attacks, weather events, natural disasters, or terrorist attacks. Managing such risks, including contingency plans, is crucial to ensuring business continuity.

Over the past decade, the number of information security breaches has grown exponentially with some attacks reaching unprecedented scales and the cyber threat landscape continues to grow and evolve, abusing existing and new technologies and exploiting vulnerable users. These incidents and the related costs have shown that information security/cybersecurity has become a financially material issue that must be diligently managed to protect corporate value. The costs of cyberattacks are manifold and can impact the company in different ways. Internal costs are operational costs and relate to dealing with cybercrime and incidence prevention. External costs include the consequences of the cyber-attack such as the loss or theft of sensitive information, operations' disruption, fines and penalties, infrastructure damage, or revenue losses due to loss of customers. Thus, ensuring the security and resilience of net

All boards should have the ability to understand cyber threats and assess management's capability of dealing with Cyber-related issues according to the National Association of Corporate Directors (NACD). However, also senior executives, like CISO, CSO or CIO, must have the necessary leadership, operational and strategic skills to understand and face the risk. A cyber-risk committee would have the role to encourage both the board and executives to give cyber-security issues a high priority and to prioritize them with strong oversight.

The question focuses on whether the company has the appropriate governance to prevent IT system failures and major information security/cybersecurity incidents.

Additional Question Guidance & Information Display

Key Definitions

CISO: A chief information security officer (CISO) is the senior-level executive in an organization responsible for establishing and maintaining the organization's vision, strategy, and program to ensure information assets and technologies are well protected. As the highest-ranking cybersecurity executive, the chief information security officer (CISO), or alternatively the Chief Information Officer (CIO), is responsible for establishing and maintaining the enterprise strategy and processes that protect information assets.

CSO: A Chief Security Officer (CSO) is the senior-level executive responsible for the physical security of a company, including its communication and business systems. CSO's responsibility is to protect people, assets, technology, and infrastructure.

Cybersecurity: Cybersecurity is the body of technologies, processes, and practices designed to protect networks, systems, computers, programs, and data from attack, damage, or unauthorized access (according to SEC).

Experience: Relevant experience could be past experience in the implementation of IT, information security or cybersecurity or operational responsibility for IT as a senior executive of a company. In addition for Board Member, non-technical experience as a senior executive of an IT company (such as SVP Marketing, Sales etc.) is not valid. Academic experience in IT is not considered relevant.

Information security: The protection of information and information systems from unauthorized access, use, disclosure, disruption, modification, or destruction in order to provide confidentiality, integrity, and availability (according to NIST).

Information System: Applications, services, information technology assets, or other information handling components (according to ISO).

IT security: IT security is the process of implementing measures and systems designed to securely protect and safeguard information utilizing various forms of technology. IT security is thus considered a bit broader than cybersecurity.

Important note: Throughout the whole criterion we always refer to IT security, cybersecurity or information security according to the definitions above. For the appraisal of the criterion, we will treat "IT security", "information security" and "cybersecurity" equally.

Data Requirements

Disclosure requirements for partially public question: Additional credit will be granted for relevant publicly available evidence covering:

- The board member's membership in the committee which oversees cybersecurity strategy
- The role or function within or reporting directly to the Executive Management team responsible for overseeing cybersecurity within the company

For **executive management responsibility**, please indicate which role or function within or reporting directly to the Executive Management team is responsible for overseeing cybersecurity within the company. The best practice is to have a CISO or CSO as part of the Executive Management team or reporting directly to it. In case another function has responsibility for IT security/cybersecurity and is part of or reporting directly to the Executive Management team, please select the second or third option accordingly.

Questionnaire

Are the board of directors and executive management engaged in the information security/cybersecurity strategy and review process?

1. ○

   Yes, we have a director on the board with relevant background in IT engaged on the cybersecurity strategy process and someone in the Executive Management team who oversees the company's cybersecurity strategy:

   1. ☐

      Board Responsibility

      Please indicate the Board member who oversees the cybersecurity strategy together with his/her experience and indicate this person's membership in the committee responsible for the oversight of cybersecurity.

      Please provide supporting evidence:

Board Member	**Please indicate the Board member's membership in the committee which oversees cyber security strategy**
Name of board member: 1. ☐ Relevant experience and previously held positions:	1. ☐ If publicly available, please indicate where this information can be found in your **public reporting** or **corporate website**. 1. ○ Cybersecurity / information security committee 2. ○ Risk committee 3. ○ Audit committee 4. ○ Not known

   2. ☐

      Executive Management Responsibility

      Please indicate which role or function within or reporting directly to the Executive Management team is responsible for overseeing cybersecurity within the company.

      Please provide supporting evidence:

      1. ☐

         If publicly available, please indicate where this information can be found in your **public reporting** or **corporate website**.

      1. ○

         Chief Information Security Officer (CISO) / Chief Security Officer (CSO)

      2. ○

         Chief Technology Officer (CTO) / Chief Information Officer (CIO) or similar

      3. ○

         CEO / COO / CRO or similar with clear responsibility for IT security/cybersecurity

      4. ○

         We do not have anyone who oversees cybersecurity in the executive management team

      5. ○

         Not known

2. ○

   No, we don't have a director on the board with relevant background in IT engaged on the cybersecurity strategy process and someone in the Executive Management team who oversees the company's cybersecurity strategy.

3. ○

   Not applicable. Please provide explanations in the comment box below.

4. ○
