Question: Internal Carbon Pricing
Include Modeled Scores : Yes

Internal Carbon Pricing

Question

Does the company use an internal carbon price?

Rationale

Many major publicly traded companies have integrated an internal carbon price as a core element in their ongoing business strategies. Such carbon pricing has become a standard operating practice in business planning as a means of testing strategic and investment assumptions' vulnerability to ever-stronger climate-related regulation and the broader emergence (explicitly or implicitly) of a cost of carbon. Through this question, we aim to assess how robustly companies are using this approach to anticipate an eventual regulatory approach in some form to address climate change.

Performance Summary	
Question Level Company Performance	70
Question Weight	4
Year-on-Year Change	0
Industry Average Score	13
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Internal carbon price: Internal assumptions of a carbon price as a planning tool to help identify revenue opportunities, risks, and as an incentive to drive maximum energy efficiencies to reduce costs and guide capital investment decisions.

Type of internal carbon price:

- **Shadow price:** attaching a hypothetical cost of carbon to each tonne of CO2e as a tool to reveal hidden risks and opportunities throughout its operations and supply chain and to support strategic decision-making related to future capital investments.
- **Implicit carbon price:** dividing the cost of abatement/procurement by the tonnes of CO2e abated. This calculation helps quantify the capital investments required to meet climate-related targets and is frequently used as a benchmark for implementing a more strategic internal carbon price.
- **Internal fee:** charging responsible business units for their carbon emissions. These programs frequently reinvest the collected revenue back into clean technologies and other activities that help transition the entire company towards lower-carbon operations and investments.
- **Internal trading:** mechanism allowing internal business units to trade allocated carbon credits.

Data Requirements

In case your company uses more than one type of internal carbon price, please report the price that has the greatest impact on your organization (i.e., price * quantity of emissions generated). In case your company uses a differentiated pricing which varies for example by region or business unit, please report the maximum price used.

Price (per metric tonne CO2e): Please report the value of the price per metric tonne you use for your analysis and not the total value of your analysis.

GHG Scopes covered: Scope 3 is not expected to cover all Scope 3 categories, but the ones considered material by the company.

Disclosure Requirements

Supporting evidence:

- The document(s) you attached will be used to verify the qualitative part of your response. If a question text field is available, a comprehensive answer in that field can be accepted instead of a supporting document. Any qualitative response that cannot be verified in the attached document(s) or via the information provided in the related question text field (if available) will not be accepted.
- Quantitative figures provided in the response do not need supporting evidence. You may still provide a reference using the reference clip. This could include examples of the underlying calculations or approaches to data aggregation used to compile the provided quantitative information.
- The supporting documents do not need to be available in the public domain.

Disclosure requirements for partially public question:

Additional credit will be granted for relevant publicly available evidence for each option.

- Objectives to implement a carbon price
- GHG Scope covered
- Type of internal carbon price
- Price (per metric tonne CO2e)
- Application

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Company's Internal Carbon Pricing	Applicable
Company's objective to implement an internal carbon price includes navigating regulations	-
Company's objective to implement an internal carbon price includes incentivizing consideration of climate-related issues in decision making	-
Company's objective to implement an internal carbon price includes driving energy efficiency	-
Company's objective to implement an internal carbon price includes driving low-carbon investments	-
Company's objective to implement an internal carbon price includes stress testing investments	-
Company's objective to implement an internal carbon price includes identifying and seizing low-carbon opportunities	YES
Scope 1 GHG emissions included in internal carbon pricing	YES
Scope 2 GHG emissions included in internal carbon pricing	YES
Scope 3 GHG emissions included in internal carbon pricing	YES
Company's type of internal carbon price is shadow price	YES
Company's type of internal carbon price is an internal fee	-
Company's type of internal carbon price is internal trading	-
Company's type of internal carbon price is the implicit price	-
Company's application of internal carbon price	All business decision-making processes
Company's internal carbon price per metric tonne CO2e (Mex$)	870.440
Company's objective to implement an internal carbon price includes conducting cost-benefit analysis	-
Company's objective to implement an internal carbon price includes incentivizing consideration of climate-related issues in risk assessment	-
Company's objective to implement an internal carbon price includes reduction of upstream value emissions	-
Company's objective to implement an internal carbon price includes setting and/or achieving of climate-related policies and targets	-
Company's objective to implement an internal carbon price includes setting a carbon offset budget	-
Company publicly discloses its objectives to implement a carbon price	-
Company publicly discloses the GHG scopes covered	-
Company publicly discloses the types of internal carbon price used	-
Company publicly discloses the internal carbon price used per metric tonne CO2e	-

Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

QUESTION LEVEL INPUT	COMPANY ANSWER
Company publicly discloses information on application of internal carbon price	-
Company's objective to implement an internal carbon price includes influencing strategy and/or financial planning	-

Questionnaire

Does the company use an internal price of carbon? If yes, please specify the company's objective to implement an internal carbon price and provide details of how this is being used within the organization and what the internal carbon price is. **In case the company uses more than one type of internal carbon price, please report the price that has the greatest impact on your organization (i.e. price * quantity of emissions generated).**

1. (•) Yes, the company uses an internal carbon price. Please specify the details in the table below, attach supporting evidence and indicate if the information is publicly available.

Objectives to implement a carbon price	1. ☐ Conduct cost-benefit analysis 2. ☐ Drive energy efficiency 3. ☐ Drive low-carbon investments 4. ☐ Incentivize consideration of climate-related issues in decision making 5. ☐ Incentivize consideration of climate-related issues in risk assessment 6. ☑ Identify and seize low-carbon opportunities 7. ☐ Influence strategy and/or financial planning 8. ☐ Navigate regulations 9. ☐ Reduce upstream value chain emissions 10. ☐ Setting and/or achieving of climate-related policies and targets 11. ☐ Set a carbon offset budget 12. ☐ Stress test investments	1. ☐ Publicly available
GHG Scopes covered	1. ☑ Scope 1 2. ☑ Scope 2 3. ☑ Scope 3	1. ☐ Publicly available
Type of internal carbon price	1. ☑ Shadow price 2. ☐ Internal fee 3. ☐ Internal trading 4. ☐ Implicit price	1. ☐ Publicly available
Price (per metric tonne CO2e)	870.44 Currency:	1. ☐ Publicly available
Application	All business decision-making processes	1. ☐ Publicly available

2. ( ) No, the company does not use an internal carbon price.
3. ( ) Not applicable. Please provide explanations in the comment box below.
4. ( ) Not known
