Water Efficiency Management Programs

Question

Does the company have programs on water efficiency management?

Rationale

Water is essential to develop and maintain successful and healthy economies and for human health and well-being. In any responsible business or organization, monitoring water use is a key indicator of its environmental sustainability performance. Knowing and managing water challenges can protect a business from significant and unforeseen costs caused by quantity and quality issues, which could also restrict business growth and obstruct important socio-economic benefits. Adequate water management can also protect an organization from regulatory breaches and negative reputational impacts.

This question assesses how companies are taking steps towards properly managing water as a critical resource for their businesses through specific water management programs. In their planning processes, companies must identify opportunities to continually improve water efficiency performance. Those programs should focus on reviewing water use, measuring and monitoring water use indicators, improving efficiency performance through reducing, replacing or reusing water in operations, etc.

The scope of this question is limited to direct operations and does not include the supply chain.

Performance Summary

Question Level Company Performance	100
Question Weight	25
Year-on-Year Change	0
Industry Average Score	52
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Water efficiency management programs: Include the planning and definition of actions that enable businesses to assess and account for their water use, identifying and implementing measures to achieve and improve efficiency through the systematic management of water.

It should consider the following:

Water use assessments: A company's process of reviewing and analyzing its water use, identifying activities and functions of significant water use, determining processes and services that affect used water quality, and monitoring water use quantities. These assessments determine the activities and functions with potential for better water efficiency. Data gathering, indicators monitoring and continuous reviewing allow for improvements in water efficiency performance. Please refer to ISO 46001 in the References section

Actions to reduce water consumption: All measures focused on reducing the amount of water required for business activities and operations. These can range from actions regarding equipment, systems or processes at facility/site level to those concerning employees/staff in office functions. Examples include water-saving devices, submeters installed in different plant areas, pressure reductions at taps, reuse of storm and grey water, rainwater harvesting, reusing process water for cooling towers, etc.

Actions to improve wastewater quality: The measures implemented at facility level focused on improving the quality of wastewater/discharge water. These can refer to improvements at the source (e.g., process improvements), effluent monitoring and periodic sampling, wastewater treatment processes (according to type of effluent), water discharge controls, inspections and audits, etc.

Establishment of targets to reduce water use: A water efficiency management program will allow for efficiency improvements based on quantitative, time-bound water reduction targets. We expect companywide targets or site-specific targets that clearly cover the majority of operational sites.

Application of water recycling: Companies can benefit from water reuse and recycling, that is, the process by which wastewater produced from one source is treated to be reused in the same process or recycled for another. Various methods for reusing or recycling industrial water are available, depending on water quality requirements, space constraints and budgetary considerations.

Awareness training provided to employees on water efficiency management programs: To help educate and engage employees regarding water efficiency management and conservation. This training should make staff aware of how to reduce water consumption in their daily jobs as well as able to identify problems and innovate solutions to reduce water use within the company. General references to "environmental care training" are not sufficient for this criterion.

Disclosure Requirements

This question requires supporting evidence from the public domain. The information provided must be included in your public reporting (e.g., annual report, sustainability report, integrated report, company publications) or corporate website.

Any response that cannot be verified in the attached public document(s) will not be accepted.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
The company has a publicly available water efficiency management program in place	Applicable
Company's water efficiency management program includes water use assessment to identify opportunities for water efficiency	YES
Company's water efficiency management program includes actions to reduce water consumption	YES
Company's water efficiency management program includes actions taken to improve wastewater quality	YES
Company's water efficiency management program includes establishment of targets to reduce water use	YES
Company's water efficiency management program includes application of water recycling	YES
Company's water efficiency management program includes awareness training for employees on water efficiency management programs	YES

Questionnaire

Does the company have water efficiency management programs in place?

1. (•) Yes, the company has water efficiency management programs that cover the following elements. Please indicate where this information is available in **public reporting or corporate website**.
    1. [x] Water use assessment to identify opportunities for water efficiency improvements
    2. [x] Actions to reduce water consumption
    3. [x] Actions to improve wastewater quality
    4. [x] Establishment of targets to reduce water use
    5. [x] Application of water recycling
    6. [x] Awareness training provided to employees on water efficiency management programs
2. ( ) No, the company does not publicly report on water efficiency related programs.
3. ( )
