Health & Nutrition Policy

Question

Does the company have a policy on health & nutrition and is it available publicly?

Rationale

Empowering consumers is a crucial step towards building a healthier society. To make informed choices, consumers need clear and accurate information about food content, nutritional value, and how a balanced diet can support energy levels, health, and overall well-being. However, education alone is not sufficient if basic information on ingredients and nutritional content is not readily available. It is, therefore, the responsibility of food producers and retailers to ensure that nutritional information is accessible and transparent to their customers.

For companies, effectively managing and scaling up nutrition-related activities requires that commitments to health and nutrition be deeply integrated into their core business strategies. When health and nutrition are prioritized at the highest levels, companies can better allocate resources, track progress, and report on their performance to stakeholders. This question evaluates the degree to which a company's corporate strategy encompasses a dedicated focus on improving nutrition, along with responsible marketing and labeling practices.

Performance Summary	
Question Level Company Performance	40
Question Weight	33
Year-on-Year Change	(60)
Industry Average Score	13
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

Affordability or accessibility: In 2020, the Food and Agriculture Organization (FAO) of the United Nations reported that over three billion people lacked access to affordable and nutritious food. This was driven by factors such as rising food costs, food insecurity, malnutrition, global epidemics, and ongoing conflicts. To address these challenges, reducing the cost of food and implementing targeted interventions in food supply chains are crucial. Such measures are key to ensuring that nutritious food is both affordable and accessible to vulnerable populations, ultimately enhancing global food security and improving public health outcomes.

Portion size and context: Food and beverage marketing communications should not encourage or condone excess consumption and portion sizes should be appropriate to the setting portrayed.

Marketing communications accurately represents the characteristics of the product featured: Copy, sound, and visual presentations in marketing communications for food and beverage products should accurately represent the characteristics of the product featured, such as taste, size, content nutrition or health benefits, and should not mislead consumers concerning any of those characteristics.

All health & nutrition information and claims have a scientific basis: Nutritional information and claims about nutrition and health benefits are based on scientific data. Claims should be conveyed consistent with the nature and scope of the evidence, providing the consumer with supportable information.

International Chamber of Commerce (ICC) Framework for Responsible Food and Beverage Marketing Communications, 2019: General principles of the ICC Advertising and Marketing Communications Code, 2018, which governs all marketing communications is applied in the context of food and beverage marketing communications.

Codex Alimentarius Guidelines: The Codex Alimentarius, or "Food Code" is a collection of standards, guidelines and codes of practice adopted by the Codex Alimentarius Commission. The Commission, also known as CAC, is the central part of the Joint FAO/WHO Food Standards Program and was established by FAO and WHO to protect consumer health and promote fair practices in food trade.

Nutrient declaration: Standardized statement or listing of the nutrient content of a food and are mandatory for all prepackaged foods for which nutrition or health claims are made in accordance to Article 3(2) of Codex Alimentarius Guidelines on Nutrition Labelling, CAC/GL 2-1985. Certain foods may be exempted for example, based on nutritional or dietary insignificance or small packaging.

Nutrition claim: Any representation which states, suggests, or implies that a food has nutritional properties including but not limited to the energy value and to the content of protein, fat, and carbohydrates, as well as the content of vitamins and minerals. The following do not constitute nutrition claims:

- the mention of substances in the list of ingredients;
- the mention of nutrients as a mandatory part of nutrition labelling;
- quantitative or qualitative declaration of certain nutrients or ingredients on the label if required by national legislation.

Supplementary nutrition information: Intended to increase the consumer's understanding of the nutritional value of their food and to assist in interpreting the nutrient declaration and may be presented in a number of ways. E.g., front-of-pack nutrition labelling (FOPNL) presents simplified, nutrition information on the front-of-pack of pre-packaged foods and may include symbols/graphics, text or a combination.

Data Requirements

Legal requirements for food & beverage product marketing and labeling may vary widely between countries. Hence, all options are expected to cover all products in all applicable markets and meet Codex Alimentarius Guidelines and ICC Framework for Responsible Food and Beverage Marketing Communications code requirements, or local / nation regulations, whichever is stricter.

Not Applicable: All request to mark "Not applicable" must be supported with an explanation in the additional comment textbox.

- Agricultural Products (incl. meat, poultry, dairy, etc.): Not applicable can be accepted only if the company does not generate more than 10% of its revenue from processed food & beverage products.
- Alcoholic beverage: Not applicable can be accepted if the company generates more than 90% of its revenue from alcoholic beverages.
- Bottling companies: Not applicable can be accepted if the company generates more than 90% of its revenue from bottling activities.
- Drug Retailers: Not applicable can be accepted if the company generates more than 90% of its revenue from drug retailing only.

Disclosure Requirements

Please note that this is a public question and evidence must be available in the public domain. The information provided must either be a dedicated, stand-alone policy or commitment, or be contained in a dedicated strategy section your public reporting, (e.g., Section of an annual report, sustainability report, integrated report, company publications, or corporate website).
