Year: Methodology Year: 2026
Question: Biodiversity Commitment
Include Modeled Scores : Yes

Biodiversity Commitment

Question

Does the company have a commitment on biodiversity and is it available publicly?

Rationale

The purpose of this question is to evaluate the disclosure of a company's public policy or commitment to biodiversity, covering aspects to systematically address its dependency and impact-related biodiversity risks. This includes commitments to engage with stakeholders, conduct risk assessments, disclose identified priorities and set targets to work toward no net loss. Companies are expected to disclose the mitigating actions they take and set a long-term net positive impact commitment. All aspects covered are expected to be applied to a company's entire value chain and be endorsed by either a member of the board of directors or executive management.

Performance Summary	
Question Level Company Performance	54
Question Weight	20
Year-on-Year Change	8
Industry Average Score	16
Industry Highest Score	81

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Net positive impact (NPI): A commitment aligned with the Post-2020 Global Biodiversity Framework* for outcomes in which the impacts on biodiversity across a company's value chain are stabilized by 2030. Net positive impact allows for the recovery of natural ecosystems in the next 20 years with net improvements by 2050 to achieve the Convention on Biological Diversity's vision of "living in harmony with nature by 2050."

Mitigation hierarchy: A framework to help companies minimize negative impacts on nature with a long-term outlook. This prioritized approach guides companies to avoid, limit or reduce impacts on nature, and to hold themselves accountable for restoring areas and ecosystems adversely impacted by business operations. Additionally, the option to offset aims to compensate for any residual, adverse impacts after full implementation of the previous three steps of the mitigation hierarchy. Building on this, companies might take transformative actions to address the socio-economic systems of organizations that accelerate biodiversity loss.

Targets to work towards no net loss: Must be linked to a company's biodiversity commitment/strategy and reduce dependency- and impact-related biodiversity risks for priority areas identified through the biodiversity risk assessments.

Targets may be related to:

- Avoidance or reduction of sourcing from areas of critical biodiversity
- Reduction of land use change (e.g., deforestation)
- Reduction of resource exploitation (e.g., water use in water-stressed areas, fisheries with stocks outside biologically sustainable levels)
- Restoration or regeneration in critical value chain locations related to ecological integrity, connectivity, soil quality, etc.
- Compensation through reforestation programs or creation of protected areas or reserves

No net loss (NNL): Defined as the point at which project-related impacts on biodiversity are balanced by measures to avoid and minimize the project's impacts, undertake on-site restoration, and offset significant residual impacts on an appropriate geographical scale (e.g., local, landscape-level, national, regional).

Priority areas: Identified based on risk assessment data on dependencies and impacts across a company's value chain to determine the relative contribution of different locations to a company's overall biodiversity-related risk exposure. Criteria for identifying priority areas may include:

- High-priority sites, inputs, or product lines based on environmental and financial materiality.
- Contribution of different locations, commodities and suppliers to the total impact of the company
- State of nature in value chain locations
- Needs of value chain stakeholders, such as dependency on ecosystem services

Risk assessment: Businesses should carry out risk assessments of their dependencies and impacts on biodiversity and ecosystem services. Examples include global risk mapping that allows companies to identify operations with a high degree of exposure to potential biodiversity and ecosystem service risks, and site-level risk assessments, aimed at mitigating potential environmental and social risks.

Stakeholders: Persons or groups who are directly or indirectly affected by a project, as well as those who may have interests in a project and/or the ability to influence its outcome. Examples of stakeholder engagement may include:

- Creation of a biodiversity strategy through collaboration with experts such as consultants and non-governmental organizations) to create their own biodiversity strategy
- Suppliers
- Local community engagement
- NGOs on specific conservation or restoration projects
- Investee companies

Natural capital: Another term for the stock of renewable and non-renewable natural resources on earth (e.g., plants, animals, air, water, soils, minerals) that combine to yield a flow of benefits or "services" to people. These flows can be ecosystem or abiotic services, which provide value to businesses and to society.

Ecosystem services: Defined as the direct and indirect contributions of ecosystems to human wellbeing. These services have an impact on survival and quality of life. There are four types of ecosystem services: provisioning (oil, timber, fiber, etc.), regulating (pollination, flood control, climate regulation, etc.), cultural (recreation, aesthetic values) and supporting services (photosynthesis, water/nutrient cycles, etc.).

Abiotic services: These services benefit people and do not depend on ecological processes but arise from fundamental geological processes and include the supply of minerals, metals, and oil and gas, as well as geothermal heat, wind, tides, and the annual seasons.

Biodiversity: The total variety of Earth's species, their genetic information, and the ecosystems they form. Biodiversity is critical to the health and stability of natural capital as it provides resilience to shocks such as floods and droughts, and it supports fundamental processes such as the carbon and water cycles and soil formation. Biodiversity is a part of natural capital and underpins ecosystem services.

Critical commodities: Raw materials that have either been extracted (i.e., hard commodity) or grown (i.e., soft commodity). These critical commodities have a significant impact on biodiversity in their production process or depend on functioning biodiversity to achieve an optimal output. Examples of such critical commodities, such as those defined by the EU's rules for deforestation-free products, may include:

- Beef
- Wood
- Palm oil
- Soya
- Coffee
- Cocoa

Additionally, considering their high potential impact on biodiversity, we consider rubber and cotton as potential supply chain risks.

Areas: Refers to land, sea, or other natural environments that are used, owned, leased, operated, or permitted by a company.

Site proximity: Value chain sites that either contain (i.e., overlapping) or are adjacent (between 0km and 2km from the nearest site) to landscapes, seascapes, and watersheds critical to biodiversity.

Sites containing globally or nationally important biodiversity: Also referred to in the criteria as "critical biodiversity". These include:

- Species classified as critically endangered, endangered, or vulnerable on the International Union for Conservation of Nature (IUCN) Red List, endemic species.
- Internationally recognized areas: World Heritage sites, Ramsar Wetlands, UNESCO Man and the Biosphere Programme (MAB), biodiversity hotspots
- Nationally important biodiversity such as legally protected areas, habitats, and species.

Companies are expected to have a position or commitment on biodiversity and the impact of their operations, even if they do not currently operate in sites containing globally or nationally important biodiversity.

Own operations: A company's employees, business, subsidiaries, products and services, business units, regions, sites, plants and facilities

Suppliers: Includes brokers, consultants, contractors, distributors, franchisees or licensees, home workers, independent contractors, manufacturers, primary producers, sub-contractors, tier-1 and 2 suppliers, and wholesalers.

Partners: Include agents, lobbyists and other intermediaries, joint venture and consortia partners, customers and clients

Data Requirements

This question may be marked "The question is not applicable to the company" for companies that can credibly demonstrate in a comprehensive comment that it has:

- No impact on biodiversity in its own operations
- No impact on biodiversity in its key raw material supply chains
- No impact at the use-phase or end-of-life of products/services
- No financing activities that impact or depend on biodiversity

Industry-specific Guidance:

Utilities (ELC, GAS, MUW)

- ELC & GAS: Utilities that have no power generation or transmission business or are only in electricity/gas distribution should mark "The question is not applicable to the company" and provide an explanation in the comment box.
- MUW: Pure water utilities should mark "The question is not applicable to the company" and provide an explanation in the comment box.

Real Estate (REI and REM)

Companies that have not marked 'Development of major renovation and new construction' as one of the main activities of the business in question '0.1 Denominator Area' should mark "The question is not applicable to the company"

Companies that have marked 'Development of major renovation and new construction' as one of the main activities of the business in question '0.1 Denominator Area' but are only operating in urban environments should mark "The question is not applicable to the company" and provide an explanation in the comment box.

Consumer Discretionary (CNO, REX, TRT)

Companies in the following industries that only provide online services should mark "The question is not applicable to the company" and provide an explanation in the comment box.

- CNO Casinos & Gaming
- REX Restaurants & Leisure Facilities
- TRT Hotels, Resorts & Cruise Lines

Industrials (ICS)

Companies in the Commercial Services and Supplies (ICS) industry that are not involved in waste management activities should mark "The question is not applicable to the company" and provide an explanation in the comment box.

Disclosure Requirements

This question requires supporting evidence from the public domain. The information provided has to be included in your public reporting (e.g., annual report, sustainability report, integrated report, company publications, policy document) or corporate website.

Information should be available in a policy document or separate section in company report or website. Information, which is scattered, or weak, or unclear commitments (e.g., consider, evaluate, encourage, may, etc.) will not be accepted.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Company has a public policy or commitment on biodiversity	Applicable
Commitment not to operate/explore/mine/drill in World Heritage areas and IUCN category I-IV protected areas	-
Biodiversity commitment includes the application of mitigation hierarchy when operating in areas with globally or nationally important biodiversity	YES
Biodiversity commitment includes working with external partners to help the company fulfil such commitment	YES
Biodiversity commitment includes a target for net positive impact	-
Biodiversity commitment includes a target for no net loss or net improvement	-
Scope of the biodiversity commitment includes own operations	YES
Biodiversity policy or commitment is endorsed by a member of either the Board of Directors or Executive Management	Executive
This aspect refers to the company's target year for its net positive impact commitment. (Calendar Year)	Not answered
Biodiversity policy/commitment defines conducting a risk assessment	YES
Scope of the biodiversity commitment includes suppliers	YES
Scope of the biodiversity commitment includes partners	-
Company has a biodiversity policy endorsed by a member of either the Board of Directors, or Executive Management	YES

Questionnaire

Does the company have a commitment on biodiversity and is it available publicly?

1. (•)

   Yes the company has a commitment on biodiversity. Please indicate where this information is available in **public reporting or corporate website.**

   Commitment aspects

   The commitment covers the following aspects:

   1. [ ] Achievement of a net positive impact (NPI) on biodiversity

      Please indicate the target year:

      Not answered

   2. [ ] Definition of biodiversity-related targets for priority areas to work towards no net loss
   3. [ ] Commitment required of value chain to avoid operational activities near sites containing globally or nationally important biodiversity
   4. [x] Application of a mitigation hierarchy
   5. [x] Conducting a biodiversity risk assessment
   6. [x] Engagement with stakeholders on biodiversity

   Scope of commitment

   Which parts of operations, corporate processes and supply chain are covered by the biodiversity commitment?

   1. [x] Own operations
   2. [x] Suppliers
   3. [ ] Partners

   Policy endorsement

   1. [x] Please select the highest endorsing decision-making body:
      1. ( ) Board of directors
      2. (•) Executive management
2. ( ) No, the company does not publicly report on a commitment on biodiversity.
3. ( ) The question is not applicable to the company.

Confidential additional comments

Use the text field below only in the following cases: (i) to describe significant changes in data or calculation methodology compared to last year's submission, (ii) to explain why a question is not applicable to your company's business model, (iii) to explain if your data deviates from the unit or format requested, or (iv) to provide supporting notes on translations of non-English references.
