Question: Climate-Related Scenario Analysis
Include Modeled Scores : Yes

Climate-Related Scenario Analysis

Question

Does the company conduct climate-related scenario analysis?

Rationale

Companies need to consider a broad range of assumptions, uncertainties, and potential future states to understand the potential effects of climate change on their businesses, strategies, and financial performance across different time horizons and temperature pathways. One way to do this is through conducting climate-related scenario analysis.

This question is aligned with the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD), which include a recommended disclosure on the resilience of the organization's strategy, taking into consideration different climate-related scenarios, including a 2 degrees C or lower scenario.

Performance Summary	
Question Level Company Performance	0
Question Weight	6
Year-on-Year Change	(100)
Industry Average Score	30
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Scenario analysis: Process for identifying and assessing a potential range of outcomes of future events under conditions of uncertainty. In the case of climate change, for example, scenarios allow an organization to explore and develop an understanding of how the physical and transition risks of climate change may impact its businesses, strategies, and financial performance over time. Climate-related scenario analysis should consider climate risks that are material to companies' operations and value chain.

(TCFD (2017), Recommendations of the Task Force on Climate-related Financial Disclosures)

Qualitative scenario analysis: Explores relationships and trends for which little or no numerical data is available. This is generally a high-level narrative approach to scenario analysis, suitable for organizations that are familiarizing themselves with the process. For example, relying on industry trends and applying them to a specific organization or business activity, or undertaking quantitative research into a specific trend.

Quantitative scenario analysis: Assesses measurable trends and relationships using quantitative models, data sets and other analytical techniques to illustrate potential pathways or outcomes. This is a more detailed approach to conducting scenario analysis. External third-party scenarios or datasets can be used. Companies can also develop in-house modeling capabilities that consider specific assumptions or parameters.

2 degrees C or below 2 degrees, and above 2 degrees: Under the 2015 Paris Agreement on climate change, nearly 200 countries agreed to limit global warming to no more than 2 degrees C by 2100, and to aim for a no more than 1.5-degree increase. The 2-degree scenario is widely seen as the global community's accepted limitation of temperature growth to avoid significant and potentially catastrophic changes to the planet. Scenarios of 2 degrees or below can be referred to as "Paris Aligned." Scenarios of above 2 degrees of warming show a potential situation where this agreement is not met.

IPCC RCP/SSP: The UN Intergovernmental Panel on Climate Change (IPCC) produces physical risk scenarios under a variety of warming pathways. Within its sixth assessment report, designated as AR6, new scenarios were developed called shared socioeconomic pathways (SSPs). The SSPs aim to replace representative concentration pathways (RCPs), although RCPs still form the basis of SSPs and are widely used.

https://www.ipcc.ch/assessment-report/ar6/

International Energy Agency (IEA): The IEA produces various energy and transition risk-related scenarios, the details of which can be used for transition risk scenario analysis.

Other listed transition scenarios:

- Network for Greening the Financial System (NGFS): https://www.ngfs.net/ngfs-scenarios-portal/
- Greenpeace: https://www.greenpeace.org/static/planet4-canada-stateless/2018/06/Energy-Revolution-2015-Full.pdf
- Deep Decarbonization Pathways (DDP): https://ddpinitiative.org/display/
- International Renewable Energy Agency (IRENA): https://www.irena.org/publications/2020/Sep/Scenarios-for-the-Energy-Transition-Global-experience-and-best-practices
- BloombergNEF New Energy Outlook (BNEF NEO): https://about.bnef.com/new-energy-outlook/

Data Requirements

Please select all the climate scenarios you have used to assess physical and transition risks. In line with the TCFD recommended disclosure, at least two scenarios are required for full scoring. One of these scenarios should be based on a warming limit of 2 degrees C or lower. The other scenario should be based on a warming limit of above 2

degrees.

If your company conducts climate scenario analysis with scenarios that are not listed in the question table, please describe the following elements in the text box below the selected option. Please note that this information should be available in the public domain.

- A description of the scenarios used, and whether they are scenarios of 2 degrees C or lower, or above 2 degrees.

Please note: For companies that use NGFS scenarios for physical risks and transition, please select the "The company's analysis covers at least one [...] scenario that is not listed in the table" option depending on the temperature used.

Mentioning the existence of climate scenarios or their implications for the sector as a whole is not accepted for this question.

Disclosure Requirements

- The document(s) you attached will be used to verify your response.
- The supporting documents must be available in the public domain.
- Any response that cannot be verified in the attached document(s) will not be accepted.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Company has completed an assessment of material physical climate risks	Not measured
If the company has conducted climate related scenario analysis : Qualitative Quantitative Both	Not measured
Company uses the RCP 1.9 scenario as a climate-related scenario (2026)	Not measured
Company uses the IEA NZE 250 scenario as a climate-related scenario (2026)	Not measured
Company uses the IEA 2DS scenario as a climate-related scenario (2026)	Not measured
Company uses the RCP 2.6 scenario as a climate-related scenario (2026)	Not measured
Company uses the RCP 3.4 scenario as a climate-related scenario	Not measured
Company uses the IEA CPS scenario as a climate-related scenario (2026)	Not measured
Company uses the RCP 4.5 scenario as a climate-related scenario (2026)	Not measured
Company uses the RCP 6 scenario as a climate-related scenario (2026)	Not measured
Company uses the IAE 450 scenario as a climate-related scenario (2026)	Not measured
Company uses the RCP 7.0 scenario as a climate-related scenario	Not measured
Company uses the Greenpeace scenario as a climate-related scenario (2026)	Not measured
Company uses the RCP 8.5 scenario as a climate-related scenario (2026)	Not measured
Other Scenario Analysis below 2C (2026)	Not measured
Company uses the DPP scenario as a climate-related scenario (2026)	Not measured
Company uses the IEA SDS scenario as a climate-related scenario	Not measured
Company uses the IEA B2DS scenario as a climate-related scenario	Not measured
Company uses the APS scenario as a climate-related scenario	Not measured
Other Scenario Analysis for Above 2C (2026)	Not measured
Company uses the IRENA scenario as a climate-related scenario (2026)	Not measured
Company uses the IEA STEP scenario as a climate-related scenario	Not measured
Company uses the BNEF NEO scenario as a climate-related scenario for transition risks	Not measured
Company uses NGFS Below 2C as the scenario as a climate-related scenario	Not measured
NGFS Above 2C scenarios	Not measured

Questionnaire

Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

Does the company conduct climate-related scenario analysis?

1. Yes, the company conducts climate-related scenario anaylsis. Please indicate where this information is available in **public reporting or corporate website**.
    1. The company uses qualitative climate-related scenario analysis
    2. The company uses quantitative climate-related scenario analysis
    3. The company uses qualitative and quantitative climate-related scenario analysis

Please select any climate-related scenarios that the company has used in their climate-related scenario analysis:

Scenario type	2 degrees C or below	Above 2 degrees
Transition scenario	1. IEA Net Zero Emissions by 2050 Scenario 2. IEA 2°C Scenario 3. IEA Beyond 2°C Scenario 4. IEA 450 5. IEA Sustainable Development Scenario 6. IEA Announced Pledges Scenario or nationally determined contributions (NDCs) 7. Greenpeace 8. DDP 9. IRENA 10. BNEF NEO 11. NGFS (2 degrees or below scenarios)	1. IEA Stated Policies Scenario (previously IEA New Policies Scenario) 2. IEA Current Policies Scenario 3. NGFS (Above 2 degrees scenarios)
Physical scenario	1. RCP 1.9 (or SSP1 1.9) 2. RCP 2.6 (or SSP1 2.6)	1. RCP 3.4 (or SSP4 3.4) 2. RCP 4.5 (or SSP2 4.5) 3. RCP 6.0 (or SSP4 6.0)

4. ☐ RCP 7.0 (or SSP3 7.0)
5. ☐ RCP 8.5 (or SSP5 8.5)

1. ☐ The company's analysis covers at least one 2 degrees C or below scenario that is not listed in the table, please provide further details.
2. ☐ The company's analysis covers at least one above 2 degrees scenario that is not listed in the table, please provide further details.

2. ◉ No, the company does not publicly report that it conducts climate-related scenario analysis.
3. ○ The question is not applicable to the company.

Confidential additional comments

Use the text field below only in the following cases: (i) to describe significant changes in data or calculation methodology compared to last year's submission, (ii) to explain why a question is not applicable to your company's business model, (iii) to explain if your data deviates from the unit or format requested, or (iv) to provide supporting notes on translations of non-English references.
