**Additional Disclosure**

**Year:** Methodology Year: 2026
**Question:** Indirect Greenhouse Gas Emissions (Scope 3)
**Include Modeled Scores :** Yes

**Indirect Greenhouse Gas Emissions (Scope 3)**

## Question

Does the company track its indirect greenhouse gas emissions (Scope 3)?

## Rationale

The question assesses the company's indirect emissions from the value chain (Scope 3 emissions) and assess its overall trend. Scope 3 emissions represent the majority of emissions for most industries so it is crucial for companies to measure all relevant sources of Scope 3 emissions in their value chain to identify climate risks and opportunities, provide transparency to the markets and comply with regulatory requirements.

| Performance Summary | |
|---|---|
| **Question Level Company Performance** | 46 |
| **Question Weight** | 12 |
| **Year-on-Year Change** | (35) |
| **Industry Average Score** | 32 |
| **Industry Highest Score** | 100 |

*The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.*

## Additional Question Guidance & Information Display

### Key Definitions

**GHG Scope 3:** Scope 3 refers to indirect greenhouse gas emissions that are a consequence of the activities of the company and from sources not owned or controlled by the company. The GHG Protocol divides Scope 3 emissions into 15 categories that cover the upstream and downstream value chain activities of a company. Examples of upstream Scope 3 activities include the extraction and production of purchased materials and transportation of purchased fuels. Examples of downstream activities include the use of sold products and services and the transportation of sold goods.

**Relevance:** This refers to one of the five principles of the GHG Protocol's Corporate Value Chain Accounting and Reporting Standard, which states that the Scope 3 inventory should be based on the assumption that the GHG inventory appropriately reflects the GHG emissions of the company and serves users' decision-making needs, both within and beyond the company. Companies should use the principle of relevance when determining whether to exclude activities from the inventory boundary. Companies should also use the principle of relevance as a guide when selecting data sources.

According to the GHG Protocol, companies may use two types of data to calculate Scope 3 emissions: primary and secondary data.

**Primary data:** Includes data provided by suppliers or others that directly relate to specific activities in the reporting company's value chain. Primary activity data may be obtained through meter readings, purchase records, utility bills, engineering models, direct monitoring, mass balance, stoichiometry or other methods for obtaining data from specific activities in the company's value chain.

**Secondary data:** Includes industry average data (e.g., from published databases, government statistics, literature reviews and industry associations), financial data, proxy data and other generic data. In specific cases, companies may use specific data from one activity in the value chain to estimate emissions for another activity in the value chain. This type of data (i.e., proxy data) is considered secondary data since it is not specific to the activity for which emissions are being calculated.

*Source: GHG Protocol*

### Data Requirements

For this question, our expectations are aligned with the guidelines of the GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard. This means that we expect companies to account for all Scope 3 emissions and disclose and justify any exclusions (Completeness Principle of the GHG Protocol Scope 3 Standard).

For each row in the table, it is mandatory that the values provided are in the same unit.

**Emissions calculation methodology and exclusions:** Please provide a short description of the types and sources of data used to calculate emissions (e.g., activity data, emission factors and global warming potential values), along with a description of the methodologies, assumptions and allocation methods used.

Please also describe what has been excluded from the emissions calculation of each reported Scope 3 category (e.g., exclusions of specific suppliers/clients, business units, countries, offices, plants or types of greenhouse gases, etc.) and justify the reasons for the exclusion.

**If a given category does not belong to the company's value chain, or has been deemed immaterial and therefore excluded from emission calculations, please enter a value of 0 in the corresponding field of the second table and provide an explanation in the "Emission calculation methodology or rationale for exclusion".**

**Specific Data Requirements for Greenhouse Gas Emissions:**

GHG emissions should be reported as metric tonnes of CO2-equivalent (CO2e). Data on GHG emissions should include CO2 and all other GHG emissions weighted according to GHG potential.

All GHG emissions emitted in the upstream and downstream value chain of the company should be reported, if they are material/relevant. Companies should not exclude any activity that is expected to contribute significantly to the company's total Scope 3 emissions. GHG emissions reported in the first table and within each Scope 3 category should be as complete as possible, even if considerable estimations were needed.

Royalty companies and other franchisors (i.e., companies that grant licenses to other entities to sell or distribute its goods or services in return for payments) are expected to account for emissions that occur from the operation of franchises (i.e., Scopes 1 and 2 emissions of franchisees) in Scope 3 category 14, "Franchises."

**Third-party verification:** We expect that data in the most recent reported year or the year before the most recent year has been third-party verified and that relevant documentation is attached showing this verification. Internal audits or verification will not be considered. Please note it is not necessary that all individual Scope 3 categories are third-party verified to check the relevant checkbox. It is sufficient that the total Scope 3 value, or values for a few relevant categories, are third-party verified.

**Data consistency:**

- If the environmental performance data reported in the questionnaire do not correspond to the publicly reported figures, the corresponding option should be marked and the discrepancy should be explained. This option should not be indicated if the information is not publicly reported at all.
- If there is a temporary reduction in coverage due to a corporation action, the corresponding box should be marked and the reduction should be explained.
- If it is not possible to report the figures in absolute terms, the data should be reported in relative terms and the corresponding box should be ticked. Please note that information should always be reported in absolute terms if possible, even if it deviates from public reporting.

**General data requirements**

Environmental performance data should cover the activities of the entire company with the same consolidation approach as used in financial reporting and must refer to the financial year (e.g., Jan. 1 to Dec. 31 for both financial and environmental data) and be aligned with the figures reported in the "Company Information" section.

**Target:** We require the absolute target for the most recent reporting year. If your company has a multiyear and/or relative target, please extrapolate what the target value would have to be for the last financial year to make sure you are progressing toward achieving the target by the end of the target period. If you report a combined Scope 1+2+3 target, please extrapolate the share equivalent to the absolute Scope 3 emissions for inclusion in the table.

Environmental performance data should cover the emissions of suppliers and customers, and of other entities in the upstream and downstream value chain (e.g., franchisees, lessees and lessors, third-party logistics providers, retailers, etc.). In particular, the environmental data of group companies should follow these rules:

- Environmental data of companies that are consolidated proportionally must be considered to the proportion at which they are consolidated financially.
- Environmental data of companies that are fully consolidated must be fully considered irrespective of the proportion to which they belong to the group.
- Environmental data should refer to the specific company structure of each particular year. There should be no pro forma backward consolidation of the current company structure.
- Environmental data of companies that are sold or no longer consolidated should be excluded from environmental data as of the reporting period in which the company has not been consolidated anymore.
- Environmental data of companies that have been bought should only be included as of the reporting period in which the company is consolidated financially for the first time.
- Indicators, where a company has not calculated emissions, should be left blank. Zeros should be entered only when the company has calculated its emissions and their emissions are zero.

# Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

- Where the reported environmental data deviates from these definitions, please explain in what way the data provided differs from the definitions.
- If a company publicly reports on long-term targets instead of annual targets, an annual target has to be estimated based on internal target setting or linear distribution.
- The data must be provided in the unit indicated in the question.

**Disclosure Requirements**

**Disclosure requirements for partially public question**

Additional credit will be granted for relevant publicly available evidence covering the following aspect of this question:

- Indirect GHG emissions (Scope 3) figure for either the most recent reported year or the year before the most recent reported year, or of at least one individual Scope 3 category with value different from 0

**References**

This question contains categories of Scope 3 emissions and definitions of the GHG Protocol's Corporate Value Chain (Scope 3) Accounting and Reporting Standard, published in September 2011.

**Data View**

| QUESTION LEVEL INPUT | COMPANY ANSWER |
|---|---|
| Company's Scope 3 Emissions selection | Applicable |
| Emissions in the reporting year from Purchased Goods (met. ton. CO2e) | 8,698,158.000 |
| Emissions in the reporting year from Capital Goods (met. ton. CO2e) | 213,987.000 |
| Emissions in the reporting year from Fuel And Energy (met. ton. CO2e) | 303,659.000 |
| Emissions in the reporting year from Upstream Transportation And Distribution (met. ton. CO2e) | 1,163,906.000 |
| Emissions in the reporting year from Waste Generated (met. ton. CO2e) | 13,510.000 |
| Emissions in the reporting year from Business Travel (met. ton. CO2e) | 35,919.000 |
| Emissions in the reporting year from Employee Commuting (met. ton. CO2e) | 190,757.000 |
| Emissions in the reporting year from Upstream Leased Assets (met. ton. CO2e) | Not answered |
| Emissions in the reporting year from Downstream Transportation And Distribution. (met. ton. CO2e) | Not answered |
| Emissions in the reporting year from Processing Sold Products. (met. ton. CO2e) | Not answered |
| Emissions in the reporting year from Use Sold Products (met. ton. CO2e) | Not answered |
| Emissions in the reporting year from Life Treatment Sold Products (met. ton. CO2e) | 766,279.000 |
| Emissions in the reporting year from Downstream Leassed Assets (met. ton. CO2e) | Not answered |
| Emissions in the reporting year from Franchises (met. ton. CO2e) | Not answered |
| Emissions in the reporting year from Other Upstream (met. ton. CO2e) | Not answered |
| Emissions in the reporting year from Other Downstream (met. ton. CO2e) | Not answered |
| Emissions in the reporting year from Investments (met. ton. CO2e) | 378,122.000 |
| Total indirect GHG Scope 3 emissions (2022) (met. ton. CO2e) | 540,588.000 |
| Total indirect GHG Scope 3 emissions (2023) (met. ton. CO2e) | 8,843,978.000 |
| Total indirect GHG Scope 3 emissions (2024) (met. ton. CO2e) | 10,104,845.000 |
| Total indirect GHG Scope 3 emissions (2025) (met. ton. CO2e) | 11,764,297.000 |
| Indirect GHG emissions (Scope 3) target for last fiscal year reported (met. ton. CO2e) | Not answered |
| Public reporting: Indirect GHG emissions (Scope 3) data is publicly available | YES |
| Third party verification: Indirect GHG emissions (Scope 3) verified by third party in the most recent fiscal year reported | - |
| Data consistency: Indirect GHG emissions (Scope 3) data reported in the questionnaire differs from publicly available data | - |
| Data consistency: Temporary coverage reduction or target challenge in indirect GHG emissions (Scope 3) data due to corporate actions | - |
| Data consistency: Indirect GHG emissions (Scope 3) data is not reported in absolute terms and is normalized | - |
| Revenues generated through Royalties | - |

**Questionnaire**

Does the company track its indirect greenhouse gas emissions (Scope 3)?

1. (●)

Yes, the company tracks its Scope 3 emissions. Please indicate where this information is available.

| Scope 3 | Unit | FY 2022 | FY 2023 | FY 2024 | FY 2025 | Target for FY 2025 |
|---|---|---|---|---|---|---|
| **Total Scope 3 emissions** | metric tonnes of CO2 equivalents | 540588 | 8843978 | 10104845 | 11764297 | Not answered |

Please provide the company's Scope 3 emissions split based on the 15 categories of the GHG Protocol Corporate Value Chain Standard. Please use the latest available data to calculate Scope 3 emissions. Disclose any information about the methodology used to calculate the emissions in each category and whether any emissions in each category has been excluded.

| Scope 3 category | Emissions in the reporting year (metric tonnes CO2e) | Emissions calculation methodology or rationale for exclusion |
|---|---|---|
| **1. Purchased goods and services** | 8698158 | |
| **2. Capital goods** | 213987 | |

# Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

| | | |
|---|---|---|
| **3. Fuel-and-energy-related-activities** (not included in Scope 1 or 2) | 303659 | |
| **4. Upstream transportation and distribution** | 1163906 | |
| **5. Waste generated in operations** | 13510 | |
| **6. Business travel** | 35919 | |
| **7. Employee commuting** | 190757 | |
| **8. Upstream leased assets** | Not answered | |
| **9. Downstream transportation and distribution** | Not answered | |
| **10. Processing of sold products** | Not answered | |
| **11. Use of sold products** | Not answered | |
| **12. End-of-life treatment of sold products** | 766279 | |
| **13. Downstream leased assets** | Not answered | |
| **14. Franchises** | Not answered | |
| **15. Investments** | 378122 | |
| **Other upstream** | Not answered | |
| **Other downstream** | Not answered | |

1. ☐
   The majority of the company's revenues is generated through royalties.
2. ☑
   The data is publicly available.
3. ☐
   The data has been third-party verified.
4. ☐
   The data is normalized.
5. ☐
   The data differs from its publicly reported figures. Please provide an explanation:
6. ☐
   The coverage is temporarily reduced due to corporate actions. Please provide an explanation:

2. ○
   No, the company does not track its Scope 3 emissions.
3. ○
   The question is not applicable to the company.
4. ○
   The information is not available.

**Confidential additional comments**

Use the text field below only in the following cases: (i) to describe significant changes in data or calculation methodology compared to last year's submission, (ii) to explain why a question is not applicable to your company's business model, (iii) to explain if your data deviates from the unit or format requested, or (iv) to provide supporting notes on translations of non-English references.
