Internal Carbon Pricing

Question

Does the company use an internal carbon price?

Rationale

Many major publicly traded companies have integrated an internal carbon price as a core element in their ongoing business strategies. Such carbon pricing has become a standard operating practice in business planning as a means of testing strategic and investment assumptions' vulnerability to ever-stronger climate-related regulation and the broader emergence (explicitly or implicitly) of a cost of carbon. Through this question, we aim to assess how robustly companies are using this approach to anticipate an eventual regulatory approach in some form to address climate change.

Performance Summary	
Question Level Company Performance	0
Question Weight	4
Year-on-Year Change	(70)
Industry Average Score	24
Industry Highest Score	92

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Internal carbon price: Internal assumptions of a carbon price as a planning tool to help identify revenue opportunities, risks, and as an incentive to drive maximum energy efficiencies to reduce costs and guide capital investment decisions.

Type of internal carbon price:

- **Shadow price:** attaching a hypothetical cost of carbon to each tonne of CO2e as a tool to reveal hidden risks and opportunities throughout its operations and supply chain and to support strategic decision-making related to future capital investments.
- **Implicit carbon price:** dividing the cost of abatement/procurement by the tonnes of CO2e abated. This calculation helps quantify the capital investments required to meet climate-related targets and is frequently used as a benchmark for implementing a more strategic internal carbon price.
- **Internal fee:** charging responsible business units for their carbon emissions. These programs frequently reinvest the collected revenue back into clean technologies and other activities that help transition the entire company towards lower-carbon operations and investments.
- **Internal trading:** mechanism allowing internal business units to trade allocated carbon credits.

Data Requirements

In case your company uses more than one type of internal carbon price, please report the price that has the greatest impact on your organization (i.e., price * quantity of emissions generated). In case your company uses a differentiated pricing which varies for example by region or business unit, please report the maximum price used.

Price (per metric tonne CO2e): Please report the value of the price per metric tonne you use for your analysis and not the total value of your analysis.

Please make sure that the value "Price in USD" is filled. If you report the internal carbon price in other currency than USD in the field above, please also make sure to report the value in USD.

For a full score, the internal carbon price is expected to be on the level of at least USD 100. This is aligned with the estimate of the High-Level Commission on Carbon Price endorsed by the World Bank stating that a price between USD50-USD100 per tCO2e by 2030 is aligned with the Paris Agreement.

GHG Scopes covered: Scope 3 is not expected to cover all Scope 3 categories, but the ones considered material by the company.

Disclosure Requirements

Supporting evidence:

- The document(s) you attached will be used to verify the qualitative part of your response. If a question text field is available, a comprehensive answer in that field can be accepted instead of a supporting document. Any qualitative response that cannot be verified in the attached document(s) or via the information provided in the related question text field (if available) will not be accepted.
- Quantitative figures provided in the response do not need supporting evidence. You may still provide a reference using the reference clip. This could include examples of the underlying calculations or approaches to data aggregation used to compile the provided quantitative information.
- The supporting documents do not need to be available in the public domain.

Disclosure requirements for partially public question:

Additional credit will be granted for relevant publicly available evidence for each option.

- Objectives to implement a carbon price
- GHG Scope covered
- Type of internal carbon price
- Price (per metric tonne CO2e)
- Mandatory Application

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Company's Internal Carbon Pricing.	Not measured
Company's objective to implement an internal carbon price includes navigating regulations.	Not measured
Company's objective to implement an internal carbon price includes incentivizing consideration of climate-related issues in decision making.	Not measured
Company's objective to implement an internal carbon price includes driving energy efficiency.	Not measured
Company's objective to implement an internal carbon price includes driving low-carbon investments.	Not measured
Company's objective to implement an internal carbon price includes stress testing investments.	Not measured
Company's objective to implement an internal carbon price includes identifying and seizing low-carbon opportunities.	Not measured
Scope 1 GHG emissions included in internal carbon pricing.	Not measured
Scope 2 GHG emissions included in internal carbon pricing.	Not measured
Scope 3 GHG emissions included in internal carbon pricing.	Not measured
Company's type of internal carbon price is shadow price.	Not measured
Company's type of internal carbon price is an internal fee.	Not measured
Company's type of internal carbon price is internal trading.	Not measured
Company's type of internal carbon price is the implicit price.	Not measured
Company's application of internal carbon price.	Not measured
Company's internal carbon price per metric tonne CO2e.	Not measured
Company's objective to implement an internal carbon price includes conducting cost-benefit analysis.	Not measured
Company's objective to implement an internal carbon price includes incentivizing consideration of climate-related issues in risk assessment.	Not measured
Company's objective to implement an internal carbon price includes reduction of upstream value emissions.	Not measured
Company's objective to implement an internal carbon price includes setting and/or achieving of climate-related policies and targets.	Not measured
Company's objective to implement an internal carbon price includes setting a carbon offset budget.	Not measured
Company publicly discloses its objectives to implement a carbon price.	Not measured
Company publicly discloses the GHG scopes covered.	Not measured
Company publicly discloses the types of internal carbon price used.	Not measured
Company publicly discloses the internal carbon price used per metric tonne CO2e.	Not measured
Company publicly discloses information on application of internal carbon price.	Not measured
Company's objective to implement an internal carbon price includes influencing strategy and/or financial planning.	Not measured

QUESTION LEVEL INPUT	COMPANY ANSWER
Internal carbon price in USD.	Not measured

Questionnaire

Does the company use an internal carbon price?

1. ○ Yes, the company uses an internal carbon price. Please indicate where this information is available.

Aspect	Details	Public reporting
Objectives to implement a carbon price	1. ☐ Conduct cost-benefit analysis 2. ☐ Drive energy efficiency 3. ☐ Drive low-carbon investments 4. ☐ Incentivize consideration of climate-related issues in decision making 5. ☐ Incentivize consideration of climate-related issues in risk assessment 6. ☐ Identify and seize low-carbon opportunities 7. ☐ Influence strategy and/or financial planning 8. ☐ Navigate regulations 9. ☐ Reduce upstream value chain emissions 10. ☐ Setting and/or achieving of climate-related policies and targets 11. ☐ Set a carbon offset budget 12. ☐ Stress test investments	1. ☐ Yes
GHG Scopes covered	1. ☐ Scope 1 2. ☐ Scope 2 3. ☐ Scope 3	1. ☐ Yes
Type of internal carbon price	1. ☐ Shadow price 2. ☐ Internal fee 3. ☐ Internal trading 4. ☐ Implicit price	1. ☐ Yes
Price (per metric tonne CO2e)	Not measured Currency: Price in USD Not measured	1. ☐ Yes
Mandatory application	Please select	1. ☐ Yes

2. ◉ No, the company does not use an internal carbon price.
3. ○ The question is not applicable to the company.
4. ○ The information is not available.
