Year: Methodology Year: 2026
Question: Net-Zero Commitment
Include Modeled Scores : Yes

Net-Zero Commitment

Question

Has the company committed to reaching net-zero emissions across its value chain and is it available publicly?

Rationale

Companies are increasingly adopting net-zero targets to align their activities with the aim of limiting the rise of global temperature to 1.5 degrees C above preindustrial levels. Due to the lack of common understanding of the definition of net-zero, the Science Based Targets initiative (SBTi) developed a global science-based standard for companies to set net-zero targets.

The purpose of this question is to find out if a company has made a net-zero commitment, how well it is aligned with the science-based targets and what activities are planned to reach the target. This question follows the criteria and definitions of the SBTi Net-Zero Standard.

Performance Summary	
Question Level Company Performance	50
Question Weight	5
Year-on-Year Change	22
Industry Average Score	11
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Net-zero commitment: A credible corporate net-zero commitment includes commitments to:

- Reducing Scope 1, 2, and 3 emissions to zero or to a level that is consistent with reaching net-zero emissions at the global or sector level in eligible 1.5 degrees C-aligned pathways.
- Neutralizing any remaining emissions that could not be reduced at the net-zero target year and any GHG emissions released into the atmosphere thereafter.

Science-based targets: According to the SBTi, targets are considered science-based if they are aligned with what the latest climate science deems necessary to meet the goals of the Paris Agreement on climate change – limiting global warming to well-below 2 degrees C above preindustrial levels and pursuing efforts to limit warming to 1.5 degrees C.

Science Based Targets initiative (SBTi): A global body that defines and promotes best practices in emissions reductions and net-zero targets in line with climate science. It provides technical assistance, expert resources to companies who set science-based targets, and independent assessment and validation of those targets. The SBTi process for target setting and validation is as follows:

- Committing to a science-based target via a letter of intent
- Developing a target in line with SBTi criteria
- Presenting target to SBTi for official validation (within two years of committing)
- Communicating this validation to stakeholders
- Reporting progress against these targets annually

Base year: Companies should use the same base year for near-term targets and long-term net-zero targets.

Target year: To limit global warming to 1.5 degrees C above pre-industrial levels we must reach net-zero GHG emission by 2050. Hence, companies are expected to set their own net-zero targets by 2050 or sooner.

Residual emissions: Emissions sources that remain after a company has included all technically or economically feasible emission reductions to their target.

Beyond value chain mitigation: Mitigation action or investments that fall outside a company's value chain. This includes activities outside of a company's value chain that avoid or reduce greenhouse gas emissions, such as carbon credits or other "offsetting", or measures that remove greenhouse gases from the atmosphere and permanently store them.

Data Requirements

- This question should only be answered if a near-term emission reduction target is reported in the previous question.
- We will not accept targets without a Target Year specified.

Target Scope & Related Emission Reduction Target (as a percentage of base year emissions):

- We require data on gross emissions targets as a percentage of the base year emissions before any deductions or other adjustments that consider offset credits, avoided emissions or reductions attributable to the sequestration of GHG.
- If you have a target that will be partly met by offsetting or CO2 removal, please report only the proportion of the target that relates to emissions reduction.

Industry-specific guidance:

(OGR/OGX/PIP/COL)

- SBTi does not accept emission reduction targets from oil and gas companies. Therefore, for the part 'Is the target validated by Science-Based Targets initiative?', we cannot accept any option other than 'No, the target is not science-based'

OIE - SBTi validated target will be accepted if the company derives less than 50% of revenue from:

- sale, transmission and distribution of fossil fuels

- providing equipment or services to fossil fuel companies

Please see the SBTi website for further details under 'What is the SBTi's policy on fossil fuel companies?'

https://sciencebasedtargets.org/sectors/oil-and-gas#what-is-the-sb-tis-policy-on-fossil-fuel-companies

Disclosure Requirements

This question requires public evidence. We accept the company's own website and reporting, public CDP reports or information disclosed in the Science Based Targets initiative's website (https://sciencebasedtargets.org/companies-taking-action) as public evidence.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Company's public commitment to reach net-zero emissions.	Applicable
Base Year for publicly reported net-zero target. (Fiscal Year)	2019
Target Year for publicly reported net-zero target. (Fiscal Year)	2050
Scope (Coverage) of net-zero target for Scope 3 emissions.	100
Is the target validated by Science-Based Targets initiative?	Not science-based
Company neutralize residual emissions and/or further mitigate emissions beyond its value chain through Offsetting, e.g. purchasing carbon credits.	-
Company neutralize residual emissions and/or further mitigate emissions beyond its value chain through Investing in permanent carbon removal.	-
The company's target is combined.	Scope 1 + 2 + 3
Scope (coverage) of net-zero target for Scope 2 emissions.	100
Scope (Coverage) of net-zero target for Scope 1 emissions.	100
The company has a target for Scope 1.	YES
The company has a target for Scope 2.	YES
The company has a target for Scope 3.	YES

Questionnaire

Has the company committed to reaching net-zero emissions across its value chain and is it available publicly?

1. (●) Yes, the company has publicly committed to reaching net-zero emissions across its value chain. Please indicate where this information is available in **public reporting or corporate website**.

Target time frame	Target scope & related emission reduction target (as a percentage of base year emissions)	Is the target validated by Science Based Targets initiative?	Neutralizing residual emissions and mitigating beyond value chain
Base year: 2019 Target year: 2050	1. [x] Scope 1: 100 2. [x] Scope 2: 100 3. [x] Scope 3: 100 Some of the targets reported above are combined: Scope 1 + 2 + 3	1. ( ) Yes 2. ( ) No, but the company has publicly committed to seek validation to the target by SBTi 3. ( ) No, but the company considers the target to be science-based 4. (●) No, the target is not science-based	1. [ ] The target includes purchasing carbon offset credits 2. [ ] The target includes investing in permanent carbon removal

2. ( ) No, the company does not have a public net-zero commitment.
3. ( ) The question is not applicable to the company.

Confidential additional comments

Use the text field below only in the following cases: (i) to describe significant changes in data or calculation methodology compared to last year's submission, (ii) to explain why a question is not applicable to your company's business model, (iii) to explain if your data deviates from the unit or format requested, or (iv) to provide supporting notes on translations of non-English references.
