Packaging Materials

Question

Does the company track the amounts of packaging materials used?

Rationale

Packaging protects products and affects consumers' buying decisions. However, most packaging ends up in landfill. Reducing packaging and/or using recycled or certified material is an important factor in lowering the environmental impact of a product in its wider life cycle. This question tests whether the company's packaging strategy includes environmental considerations.

Performance Summary	
Question Level Company Performance	100
Question Weight	30
Year-on-Year Change	0
Industry Average Score	19
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Packaging: Packaging refers to all materials used to wrap, serve or protect goods. This only includes postconsumer packaging, which includes packaging waste produced during the shipping process, before having reached the company's end consumer or customer, as well as the packaging waste produced by the company's end consumer or customer after having used or consumed the product. This means that we expect companies to also include non-retail (e.g., polybags used during shipping) and operational packaging (e.g., plastic bags in stores, e-commerce packaging). Packaging which is returnable and reused several times should only be counted once in the total weight of packaging materials.

Post-consumer waste: Waste is not limited to the company's end consumer, but to any party receiving the final packaged product, and includes B2B packaging. Post-consumer waste is distinguished from pre-consumer waste, which is the reintroduction of manufacturing scrap back into the manufacturing process. Materials used in the product itself are not to be included, only materials used to ship and package the products sold or provided to consumers and/or customers.

Certified raw material: It is defined according to widely recognized schemes to provide assurance that materials are sourced in a way that limits negative externalities and meet minimum environmental and social standards. Examples include FSC, PEFC, and SFI for wood/paper fibers. Certification is only required for wood and paper fiber packaging.

Recycled material: Material that has been reprocessed from recovered (or reclaimed) material by means of a manufacturing process and made into a final product or a component for incorporation into a product.

Recovered material is defined as material that would have otherwise been disposed of as waste or used for energy recovery, but has instead been collected and recovered (or reclaimed) as a material input, in lieu of new primary material, for a recycling or manufacturing process. This only includes post-consumer recycled material.

Recyclable packaging which is collected by the company through take-back programs and sent to be recycled or is reused for the same purpose may also be included in this percentage, as such initiatives ensure that recyclable packaging actually gets recycled.

Data Requirements

This question focuses on packaging materials which are not plastics. Plastic packaging is covered in the question "Plastic Packaging".

For packaging made from multiple materials, please report the weight of the different materials in the mixed packaging in each relevant category. If the material type is made out of recycled or certified content, then please include it in the relevant percentage.

It is possible for a company to have wood/paper packaging material that is both certified and recycled. This results in the amounts for certified and recycled totaling over 100%. In these scenarios, please enter the data and explain in the confidential company comments.

Not applicable: Please provide an explanation in the comment box or public reporting on why a packaging material is marked as "Not applicable".

Companies in the FDR Food & Staples Retailing Industry that are classified as drug retailers should mark "This question is not applicable to the company" and provide a brief explanation in the comment box.

Companies in the Casinos & Gaming industry (CNO) that are only into online gaming should mark "This question is not applicable to the company" and provide an explanation in the comment box.

Companies in the Retailing (RTS) and the Food & Staples Retailing (FDR) industry should only report on their own branded products. This only applies to these two industries.

"This question is not applicable to the company" may NOT be ticked for FDR, REX, FOA and BVG companies which are not legally allowed to use recycled content in their packaging. We expect them to have take-back programs in place to ensure that their packaging is recycled or reused for the same purpose.

Disclosure Requirements

Disclosure requirements for a partially public question: Additional credit will be awarded for publicly available information for any of the following:

- Percentage of material used that is certified and the name of the third-party certification/standard.
- Percentage of recycled material

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Percentage of materials used that is certified: Wood & Paper fibre packaging.	99

Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

QUESTION LEVEL INPUT	COMPANY ANSWER
The company tracks the amount of packaging material used.	Applicable
Wood and paper fiber not used in packaging.	-
Weight of wood and paper fiber in packaging. (metric tonnes)	263,021.000
Percentage of wood/paper fiber made out of recycled material.	74
Metal not used in packaging.	YES
Weight of metal in packaging. (metric tonnes)	Not applicable
Percentage of metal packaging made out of recycled material.	Not applicable
Glass not used in packaging.	YES
Weight of glass in packaging. (metric tonnes)	Not applicable
Percentage of glass packaging made out of recycled material.	Not applicable
Name of the wood and paper certification standard.	FSC, SFI, PEFC
The company has reported the information related to wood & paper fiber packaging in the public domain.	YES
The company has reported the information related to metal packaging in the public domain.	-
The company has reported the information related to glass packaging in the public domain.	-

Questionnaire

Does the company track the amounts of packaging material used?

1. (●) Yes, the company tracks the amounts of packaging material used.

Packaging materials	Amount (metric tonnes)	Percentage of materials used that is certified	Percentage of materials used that comes from recycled sources	Supporting evidence	Public reporting
Wood & Paper fiber packaging		99			
1. ☐ Not applicable	263021	Standard name(s): FSC, SFI, PEFC	74		1. ☑ Yes
Metal packaging					
1. ☑ Not applicable	Not applicable		Not applicable		1. ☐ Yes
Glass packaging					
1. ☑ Not applicable	Not applicable		Not applicable		1. ☐ Yes

2. ( ) No, the company does not track the amounts of packaging materials used.
3. ( ) The question is not applicable to the company.
4. ( ) The information is not available.
