Plastic Packaging

Question

Does the company track the amounts of plastic packaging used?

Rationale

Sectors which produce large amounts of plastic packaging, such as the food, beverage and consumer goods sectors, face reputational and regulatory pressures to use alternative materials and recycled content at scale. This is creating opportunities for companies to collaborate and find solutions with different players across the value chain. The PRI's Plastic Investor Working Group consists of 29 global investors, representing USD 5.9 trillion in assets, who are committed to addressing the issue, making it increasingly pertinent for companies to start addressing plastic pollution within their sustainability frameworks. Moreover, the inception of the UN Environment's Global Plastics Platform indicates further and stricter regulatory coverage of the issue, designating a long-term advantage for companies which adopt this trend early on. Presumably, early adaptors will bear higher costs in the short run but will benefit from

Key Definitions

Plastic packaging: Plastic packaging refers to all plastic materials used to wrap, serve or protect goods. This only includes post-consumer packaging, which includes packaging waste produced during the shipping process, before having reached the company's end consumer or customer, as well as the packaging waste produced by the company's end consumer or customer after having used or consumed the product. This means that we expect companies to also include non-retail (e.g., polybags used during shipping) and operational packaging (e.g., plastic bags in stores, e-commerce packaging). Packaging which is returnable and reused several times should only be counted once in the total weight of packaging.

Post-consumer waste: Waste is not limited to the company's end consumer, but to any party receiving the final packaged product, and includes B2B packaging. Post-consumer waste is distinguished from pre-consumer waste, which is the reintroduction of manufacturing scrap back into the manufacturing process. Materials used in the product itself are not to be included, only materials used to ship and package the products sold or provided to consumers and/or customers.

Recyclable plastic: Packaging material which, post-use, can be reprocessed by means of a manufacturing process into a new product, a component incorporated into a product, or a secondary (recycled) raw material; excluding energy recovery and the use of the product as a fuel. A packaging or packaging component is recyclable if its successful post-consumer collection, sorting, and recycling is proven to work in practice and at scale. Its main packaging components, together representing >95% of the entire packaging weight, need to be recyclable and the remaining minor components need to be compatible with the recycling process and to not hinder the recyclability of the main components. Please note that oxo-degradable plastics do not fall under this definition and should not be included as recyclable packaging.

Compostable: A packaging or packaging component is compostable if it is in compliance with relevant international compostability standards and if its successful post-consumer collection, (sorting), and composting is proven to work in practice and at scale. As testing standards require packaging to disintegrate and biodegrade in a certain time frame, compostability is influenced not only by the material choice but also by, for example, the format, the dimensions, and the usage of inks and colourants. The use of compostable material is not enough to define packaging as compostable, as the material could be mixed with other items which would hinder its ability to compost. Therefore, only 100% compostable packaging should be considered here. Both home-composting or industrial composting may be included. Bio-based plastics and bio-degradable plastics which are not compostable should not be included. Oxo
be included as compostable packaging.

Recycled content: Percentage of recycled content within your plastic packaging. This refers to new packaging produced from recycled plastics, not to plastics which are recyclable. Recycled content is defined as material that has been reprocessed from recovered (or reclaimed) material by means of a manufacturing process and made into a final product or a component for incorporation into a product. Recovered material is defined as material that would have otherwise been disposed of as waste or used for energy recovery, but has instead been collected and recovered (or reclaimed) as a material input, in lieu of new virgin material, for a recycling or manufacturing process. This only includes post-consumer recycled material. Please indicate the percentage of recycled content and not the percentage of plastic packaging which contains recycled content.

Recyclable packaging which is collected by the company through take-back programs and sent to be recycled or reused for the same purpose may also be included in this percentage, as such initiatives ensure that recyclable packaging actually get recycled.

Coverage: Please indicate how much of your product packaging is included in the data disclosed by reporting the coverage as a percentage of cost of goods sold. For example, if you only report on your packaging for the United States, and operations in the United States represent X% of your COGS, please report X%.

Cost of goods sold: Cost of goods sold refers to the direct costs of producing the goods sold by a company. This amount includes the cost of the materials and labor directly used to create the good. It excludes indirect expenses, such as distribution costs and sales force costs. A synonym is "cost of sales". For Retailing (RTS and FDR) companies, the cost of goods sold from their own-branded products should be considered. For companies which do not sell the products but offer them on a complementary basis to their customers (AIR, CNO & TRT), please consider the coverage as a percentage of the cost of procurement.

Data Requirements

This question refers explicitly to plastic packaging. Plastics used within the product itself (for example clothing materials) are not to be considered here. However, disposable items such as disposable plates, cutlery, cups, straws… are to be included in the calculation of plastic waste.

For packaging made from multiple materials, the weight of plastics included in the mixed material should be included in line A (total weight), and can be included in line D (recycled content) if the plastic used is made out of recycled content. However, mixed materials cannot be included in line B and C even if the plastic contained within it is recyclable or compostable, because here we are looking for the entire packaging to be recyclable or recyclable, which is typically not the case for mixed packaging.

Please find below some examples for each industry. Please note that this is not an exhaustive list, the packaging definition above is to be considered when calculating amounts of plastic packaging.

AIR, REX, TRT, CNO: This includes for example PET bottles; plastic wrappings and containers; film packages; plastic cutlery, cups, straws and plates; plastic films such as plastic bags; shampoo bottles; beauty products; etc. For companies which do not sell the products but offer them on a complementary basis to their customers (AIR, CNO & TRT), please consider the coverage as a percentage of the cost of procurement.

BVG, FDR, FOA: This includes for example PET bottles; plastic wrappings and containers; film packages; plastic cutlery, cups and plates; plastic lids, trays, caps, egg cartons; loose fill; produce baskets, coatings and closures; plastic bags; etc.

COS: This includes for example plastic wrappings; plastic containers such as shampoo and soap bottles, makeup and other beauty products containers; film packages; plastic bags; etc.

HOU: This includes for example plastic wrappings such as toothbrush packages; plastic containers such as toothbrush bottles, makeup and other beauty products containers; film packages; etc.

RTS: This includes for example plastic wrappings such as bubble wrap; plastic containers and boxes; film packages such as polybags; shopping bags; etc.

TEX: This includes for example plastic wrappings such as bubble wrap; plastic containers and boxes; film packages such as polybags; shopping bags; plastic hangers; etc. This question looks only at plastic packaging (for example polybags). Targets, commitments or programs in place to reduce the use of plastics within clothing materials are not acceptable.

TOB: This includes for example the lining and wrapping of individual cigarette packs as well as cartons of cigarettes; plastic wrapping and packaging of lighters and alternative products; plastic packaging of cartridges for vaping; etc.

Companies in FDR Food & Staples Retailing Industry that are classified as drug retailers, should mark this question as "The question is not applicable to the company" and provide a brief explanation in the comment box.

Companies in the Casinos & Gaming industry (CNO) that are only into online gaming should mark "The question is not applicable to the company" and provide an explanation in the comment box.

Companies in the Retailing (RTS) and the Food & Staples Retailing (FDR) industry should only report on their own branded products. This only applies to the retailing (RTS and FDR) industry. "The question is not applicable to the company" may NOT be ticked for FDR, REX, FOA and BVG companies which are not legally allowed to use recycled content in their packaging. We expect them to have take-back programs in place to ensure that their packaging is recycled or reused for the same purpose.

Disclosure Requirements

For points to be awarded for public disclosure, at least one of the figures (from rows A, B, C or D) for the last fiscal year needs to be publicly disclosed.

QUESTION LEVEL INPUT	COMPANY ANSWER
Company's Monitoring of Plastic Packaging	Applicable
Total weight in tonnes of all plastic packaging (2022) (metric tonnes)	88,713.000
Total weight in tonnes of all plastic packaging (2023) (metric tonnes)	96,997.000
Total weight in tonnes of all plastic packaging (2024) (metric tonnes)	101,645.000
Total weight in tonnes of all plastic packaging (2025) (metric tonnes)	96,293.000
Target for the last fiscal year regarding the total amount of plastic packaging (metric tonnes)	Not answered
Percentage of recyclable plastic packaging expressed as a percentage of the total weight of all plastic packaging (2022)	91
Percentage of recyclable plastic packaging expressed as a percentage of the total weight of all plastic packaging (2023)	93
Percentage of recyclable plastic packaging expressed as a percentage of the total weight of all plastic packaging (2024)	94
Percentage of recyclable plastic packaging expressed as a percentage of the total weight of all plastic packaging (2025)	99
Target for the fiscal year of recyclable plastic packaging	Not answered
Percentage of compostable plastic packaging, expressed as a percentage of the total weight of all plastic packaging (2022)	0
Percentage of compostable plastic packaging, expressed as a percentage of the total weight of all plastic packaging (2023)	0
Percentage of compostable plastic packaging, expressed as a percentage of the total weight of all plastic packaging (2024)	0
Percentage of compostable plastic packaging, expressed as a percentage of the total weight of all plastic packaging (2025)	0
Target for the fiscal year of compostable plastic packaging	Not answered
Percentage of plastic packaging made out of recycled content expressed as a percentage of the total volume of all plastic packaging (2022)	Not answered
Percentage of plastic packaging made out of recycled content expressed as a percentage of the total volume of all plastic packaging (2023)	Not answered
Percentage of plastic packaging made out of recycled content expressed as a percentage of the total volume of all plastic packaging (2024)	22
Percentage of plastic packaging made out of recycled content expressed as a percentage of the total volume of all plastic packaging (2025)	Not answered
Target for the last fiscal year of plastic packaging made out of recycled content	Not answered
Coverage of plastic packaging as a percentage of cost of goods sold (2022)	95
Coverage of plastic packaging as a percentage of cost of goods sold (2023)	95
Coverage of plastic packaging as a percentage of cost of goods sold (2024)	100
Coverage of plastic packaging as a percentage of cost of goods sold (2025)	100

Questionnaire

Does the company track the amounts of plastic packaging used?

1. ●

   Yes, the company track the amounts of plastic packaging used. Please indicate where this information is available.

Plastic packaging	FY 2022	FY 2023	FY 2024	FY 2025	Target for FY 2025
A. Total weight (tonnes) of all plastic packaging	88713	96997	101645	96293	Not answered
B. Percentage of recyclable plastic packaging (as a percentage of the total weight of all plastic packaging)	91	93	94	99	Not answered
C. Percentage of compostable plastic packaging (as a percentage of the total weight of all plastic packaging)	0	0	0	0	Not answered
D. Percentage of recycled content within the company's plastic packaging (as a percentage of the total weight of all plastic packaging)	Not answered	Not answered	22	Not answered	Not answered
Coverage (as a percentage of cost of goods sold)	95	95	100	100	

   1. ☑

      The data is publicly available.

2. ○

   No, the company does not track the amounts of plastic packaging used.

3. ○

   The question is not applicable to the company.

4. ○

   The information is not available.
