Question: Food Loss & Waste Impact
Include Modeled Scores : Yes

Food Loss & Waste Impact

Question

Does the company track its total food loss & waste?

Rationale

Companies that have established the appropriate framework to quantify food loss & waste volumes, are able to take a systematic and disciplined approach towards reducing their overall food loss & waste.

Some level of food loss or waste might be inevitable. However, it is essential that these waste streams are utilized for other processes that may have economic, environmental, or social benefits instead of being discarded without any value creation. Therefore, it is essential that the current destination is tracked and that actions are taken to progress towards total food loss & waste volume reduction as well food fit for human consumption getting recycled or ending in landfill.

Performance Summary	
Question Level Company Performance	70
Question Weight	10
Year-on-Year Change	0
Industry Average Score	27
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Additional Question Guidance & Information Display

Key Definitions

Alternative uses of food loss & waste: Streams that are utilized for other processes that may have economic, environmental, or social benefits instead of being discarded without any value creation since some level of food loss or waste might be inevitable. Therefore, it is essential that the current destination of food loss & waste volumes is tracked and that actions are taken to optimize the value created. Destinations and repurposing actions may include any of the below:

- **Recycling for energy production or industrial products:** consists of the conversion of food loss or waste material into industrial products, and may include examples such as packaging (e.g., bioplastic) materials, traditional materials (leather or feather), or any other products which do not enter the food chain. Using processes to convert the material into energy or biofuels might include processes such as biochemical, anaerobic digestion/co-digestion, controlled combustion, or biomaterial processing.
- **Recycling for land applications or animal feed:** Examples of land application may include: spreading, spraying, injecting, or incorporating organic material (e.g., harvestable crops left/tilled into the soil) onto or below the surface of the land to enhance soil quality. Diverting materials from the food chain (directly or after processing) to animals is also to be included in this category.
- **Food rescue:** May take place through formal programs or informal efforts (that may also be referred to as food recovery, redistribution, or donation). Collection may take place at any point along the food supply chain, such as at the farm (e.g., field gleaning), the food processing facility, or the food distribution outlet (e.g., supermarket, restaurant). Other destinations may include collection by a third-party.

Total discarded: Sending material to an area of land or an excavated site that is specifically designed and built to receive waste. This may also include abandoning material on land or disposing of it in the sea, such as open dumps (i.e., uncovered, unlined), open burn (i.e., not in a controlled facility), the portion of harvested crops eaten by pests, and fish discards (the portion of total catch that is thrown away or slipped). Volumes for which the destination is unknown due to off-site processing should be added to this category.

Sending material down the sewer (with or without prior treatment) without control over wastewater treatment is to be considered as discarded unless the company utilized wastewater to generate alternative uses (e.g., energy recovery).

Data Requirements

Please provide the company's total food loss & waste weights, the shares used for alternative purposes and targets for the recent financial year, for the part of the company's operations for which the company has a reliable and auditable data acquisition and aggregation system.

For each row in the table, it is mandatory that the values provided are in the appropriate unit and that at least data for the most recent reporting year is reported.

Please report all food loss & waste volumes in metric tonnes.

A) Total weight of all food loss & waste: The weight of food loss & waste should reflect both the total weight of food waste and the total weight of food loss, if applicable.

Coverage: The coverage (or boundary/scope) of food loss & waste is determined by the food category, lifecycle stage, geography, and organizational unit for which the company has operational control (i.e., own operations).

Please provide the food loss & waste as a percentage of total food volumes or revenue generated by your organization and provide supporting explanations.

For further details on definitions of 'boundary', please review page 47 of the FLW Standards (see references).

Target: Please indicate the target for food loss & waste discarded in metric tonnes.

Third-party verification: For third-party verification, we expect that data in the most recent year reported has been third-party verified and that relevant documentation is attached showing this verification. Internal audits or verification will not be considered.

When referring to 'food loss & waste', we do not expect reporting on both categories. Food loss and/or food waste may be reported separately, or a company may only be exposed to one category.

Companies that are not exposed to food products, or evaluate food loss & waste to be a non-material issue for the company (e.g., financial impact negligible), may mark "The question is not applicable to the company" if a detailed explanation is provided in the comment box.

Industry-Specific Guidance

Companies in the **Food & Staples Retailing** Industry that:

- only do drug retailing should mark this question as "The question is not applicable to the company" and provide an explanation in the comment box
- only sell durable goods should mark this question as "The question is not applicable to the company" and provide an explanation in the comment box
- have operational control over the production of products (e.g., own brand label products), should also include food losses.

Companies in the **Casinos & Gaming industry (CNO)** that are only into online gaming should mark "The question is not applicable to the company" and provide an explanation in the comment box.

Companies in the **RTS Retailing industry and COS Personal Products** industry that are not exposed to food products should mark this question as "The question is not applicable to the company" and provide an explanation in the comment box.

Data Consistency

- If the food loss & waste performance data reported in the questionnaire does not correspond to publicly reported figures, the corresponding option should be marked and the discrepancy should be explained. This option should not be indicated if the information is not publicly reported at all.
- If there is a temporary reduction in coverage due to, for example, a major acquisition, the corresponding box should be marked and the reduction explained.
- If it is not possible to report the figures in absolute terms, the data should be reported in relative terms, and the corresponding box should be ticked. Please note that information should always be reported in absolute terms if possible, even if it deviates from public reporting.

Disclosure Requirements

Disclosure requirements for partially public question:

Additional credit will be granted for relevant publicly available evidence covering the following aspect of this question:

- Total food loss & waste discarded weight (A-B)

Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

QUESTION LEVEL INPUT	COMPANY ANSWER
Company's monitoring of food loss and waste performance, targets, and audit	Applicable
Total weight of all food loss and waste for each fiscal year (2022) (metric tonnes)	459,872.000
Total weight of all food loss and waste for each fiscal year (2023) (metric tonnes)	471,033.000
Total weight of all food loss and waste for each fiscal year (2024) (metric tonnes)	505,611.000
Total weight of all food loss and waste for each fiscal year (2025) (metric tonnes)	464,012.000
Target for the total weight of all food loss and waste for the last fiscal year (metric tonnes)	Not answered
Total weight of food loss and waste volumes used for alternative purposes for each fiscal year (2022) (metric tonnes)	457,350.000
Total weight of food loss and waste volumes used for alternative purposes for each fiscal year (2023) (metric tonnes)	470,169.000
Total weight of food loss and waste volumes used for alternative purposes for each fiscal year (2024) (metric tonnes)	504,377.000
Total weight of food loss and waste volumes used for alternative purposes for each fiscal year (2025) (metric tonnes)	463,675.000
Target for the total weight of food loss and waste volumes used for alternative purposes for the last fiscal year (metric tonnes)	Not answered
Target for the total weight of food loss and waste discarded for the last fiscal year (metric tonnes)	Not answered
Coverage used to express the food loss and waste volume for each fiscal year (2022)	100
Coverage used to express the food loss and waste volume for each fiscal year (2023)	86
Coverage used to express the food loss and waste volume for each fiscal year (2024)	92
Coverage used to express the food loss and waste volume for each fiscal year (2025)	87
Evaluation of the third-party verification of the food loss and waste performances of the last fiscal year	-
Public reporting: Food Loss & Waste Impact data is publicly available	YES
Data consistency: Food Loss & Waste Impact data reported in the questionnaire differs from publicly available data	-
Data consistency: Temporary coverage reduction or target challenge in food loss & waste impact due to corporate actions	-
Data consistency: Food loss & waste impact data is not reported in absolute terms and is normalized	-

Questionnaire

Does the company track its total food loss & waste?

1. (●) Yes, the company tracks its total food loss & waste. Please indicate where this information is available.

Food loss & waste	Unit	FY 2022	FY 2023	FY 2024	FY 2025	Target for 2025
A) Total weight of all food loss & waste	metric tonnes	459872	471033	505611	464012	Not answered
B) Total weight of food loss & waste volumes used for alternative purposes	metric tonnes	457350	470169	504377	463675	Not answered
Total food loss & waste discarded (A-B)	metric tonnes					Not answered
Coverage	percentage of:	100	86	92	87	

   1. [x] The data is publicly available.
   2. [ ] The data has been third-party verified.
   3. [ ] The data is normalized.
   4. [ ] The data differs from its publicly reported figures. Please provide an explanation:
   5. [ ] The coverage is temporarily reduced due to corporate actions. Please provide an explanation:

2. ( ) No, the company does not track its total food loss & waste.
3. ( ) The question is not applicable to the company.
4. ( ) The information is not available.
