# Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

BMV:BIMBO A (MI KEY: 4276592; SPCIQ KEY: 877906; TCUID: 53231)

**Additional Disclosure**

**Year:** Methodology Year: 2026
**Question:** Water Consumption in Water-Stressed Areas
**Include Modeled Scores :** Yes

**Water Consumption in Water-Stressed Areas**

## Question

Does the company track its freshwater consumption in water-stressed areas?

## Rationale

Water is becoming a scarcer resource, especially for companies and communities located in water-stressed areas. Water consumption in water-stressed areas can have an impact on local communities, leading to inadequate water access, poor sanitation and disease. This can also impact local ecosystems and agriculture, which remain dependent on water systems to thrive. Whilst climate change has played a major role in weather patterns and consequently, water availability, it is vital that companies recognize when their operations are contributing to levels of water stress. With the current rate of consumption, it is expected that by 2025, two-thirds of the world may face water shortages. Therefore, the purpose of this question is to understand how water-intensive companies' operations in water-stressed areas are performing in reducing their water consumption.

| Performance Summary | |
|---|---|
| **Question Level Company Performance** | 39 |
| **Question Weight** | 12 |
| **Year-on-Year Change** | (9) |
| **Industry Average Score** | 30 |
| **Industry Highest Score** | 100 |

*The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.*

### Additional Question Guidance & Information Display

**Key Definitions**

**Total net freshwater consumption:** Third party sources + Fresh surface water + Fresh ground water + Produced/entrained water - Water discharged. Please do not include salt or brackish water into the reported figures. Please, report only the consumption of facilities located in water stressed areas according to your mapping (e.g., <1700 m3/(person*year))

**Fresh surface water:** Fresh surface water, including rainwater, water from wetlands, rivers, lakes and fresh water that requires minimal treatment to be acceptable for domestic or agricultural uses.

**Groundwater - renewable and non-renewable:** Groundwater that can be recovered from underground.

**Produced/entrained water:** Produced water, reinjected produced water.

**Third party sources:** Municipal water, local third-party water purchase, city water from public water department, trucked water purchased, tap water and reclaimed water.

**Water discharge (excluding saltwater):** The water leaving the organization's boundary and being released to surface water, groundwater or third parties during the reporting year.

**Water stress:** "When withdrawals are greater than 20% of total renewable resources, water stress often is a limiting factor on development; withdrawals of 40% or more represents high stress. Similarly, water stress may be a problem if a country or region has less than 1,700 m3 yr-1 of water per capita (Falkenmark and Lindh, 1976)." Source: IPCC Report 2001

Other acceptable definitions of water-stressed areas include:

- "High Risk" or "Extremely High Risk" areas, as mapped by WRI's Aqueduct Global Water Tool
- "High Risk" or "Extremely High Risk" areas, as mapped by Water Footprint Network
- "High Risk" or "Very High Risk" areas, as mapped by WWF Water Risk Filter https://riskfilter.org/water/explore/map
- Environmental Flow smaller than 40%, as mapped by UN FAO https://www.unwater.org/sites/default/files/app/uploads/2019/01/SDG6_EF_LOW2.pdf

**Data Requirements**

Please provide the company's total net freshwater use for the part of the company's operations located in water-stressed areas and for which the company has a reliable and auditable data acquisition and aggregation system.

Please ensure that you have correctly filled in the Company Information section at the beginning of the questionnaire and that the coverage in the table is related to the denominator relevant for your company as indicated in that section.

Please note that 'coverage' must not be misunderstood as the company's exposure to water stress as the latter one is asked already in another question. As an example, if 20% of the company's operations are exposed to water stress, please report the total net freshwater consumption at these 20% of sites for the past four years and put 'coverage' to 100%.

**Third-party verification:** For third-party verification, we expect that data in the most recent year reported has been third-party verified and that relevant documentation is attached showing this verification. Internal audits or verification will not be considered.

This question should be marked as "**The question is not applicable to the company"** if:

- The question "Exposure to Water Stressed Areas" has been marked as "The question is not applicable"; or
- The percentage exposure is zero AND a mapping is provided.

Companies that do not operate their own production sites, such as **pure Royalty companies**, should mark this question as "The question is not applicable to the company".

**MUW Companies:** This question should be marked "The question is not applicable to the company" for utilities generating more than 50% of their revenues from drinking water supply, distribution or wastewater treatment.

**Disclosure Requirements**

**Disclosure requirements for partially public question.**

Additional credit will be granted for relevant publicly available evidence covering the following aspect of this question:

- Total net freshwater consumption in water-stressed areas for at least the most recent reported year.

### Data View

| QUESTION LEVEL INPUT | COMPANY ANSWER |
|---|---|
| The company tracks their water consumption in water-stressed areas. | Applicable |
| Total net freshwater consumption in water-stressed areas (Total water withdrawals – Total water discharges) (2022) (Million mÂ$^3$) | 2.620 |
| Total net freshwater consumption in water-stressed areas (Total water withdrawals – Total water discharges) (2023) (Million mÂ$^3$) | 3.350 |
| Total net freshwater consumption in water-stressed areas (Total water withdrawals – Total water discharges) (2024) (Million mÂ$^3$) | 3.410 |
| Total net freshwater consumption in water-stressed areas (Total water withdrawals – Total water discharges) (2025) (Million mÂ$^3$) | 3.530 |
| Water Use Coverage (2022) | 100 |
| Water Use Coverage (2023) | 100 |
| Water Use Coverage (2024) | 100 |
| Water Use Coverage (2025) | 100 |
| Water target for last fiscal year reported (Million mÂ$^3$) | Not answered |
| The reported data for water consumption in water-stressed areas is publicly available. | YES |
| The reported data for water consumption in water-stressed areas has been third-party/externally verified. | YES |
| Data Consistency | - |
| Reduced Coverage | - |
| The reported data for water consumption in water-stressed areas is normalized. | - |
| Figures reported do not match according to the definition provided (water withdrawn, net of water discharged to the source with higher or equal quality). | - |

### Questionnaire

Does the company track its freshwater consumption in water-stressed areas?

1. ●

   Yes, the company tracks its freshwater consumption in water-stressed areas. Please indicate where this information is available.

| Water consumption in areas with water stress (e.g. <1700 m3/(person*year) | Unit | FY 2022 | FY 2023 | FY 2024 | FY 2025 | Target for FY 2025 |
|---|---|---|---|---|---|---|
| **Total net freshwater consumption in water-stressed areas** (Total water withdrawals – Total water discharges) | Million cubic meters | 2.62 | 3.35 | 3.41 | 3.53 | Not answered |
| **Coverage** (as a percentage of denominator) | percentage of: | 100 | 100 | 100 | 100 | |

   1. ☑

      The data is publicly available.

   2. ☑

      The data has been third-party verified.

   3. ☐

      The data is normalized.

   4. ☐

      The data differs from its publicly reported figures. Please provide an explanation:

   5. ☐

      The coverage is temporarily reduced due to corporate actions. Please provide an explanation:

   6. ☐

      The data above is not reported according to the provided definition (water withdrawn, net of water discharged to a source of equal or higher quality).

2. ○

   No, the company does not track its freshwater consumption in water-stressed areas.

3. ○

   The question is not applicable to the company.

4. ○

   The information is not available.
