BMV:BIMBO A (MI KEY: 4276592; SPCIQ KEY: 877906; TCUID: 53231)

Additional Disclosure

Year: Methodology Year: 2020
Question: Indirect Greenhouse Gas Emissions (Scope 2)
Include Modeled Scores : Yes

Indirect Greenhouse Gas Emissions (Scope 2)

Question

Does the company track its indirect greenhouse gas emissions (Scope 2)?

Rationale

Producing more with less material is essential for many industries affected by the growing scarcity of natural resources. Operational Eco-Efficiency enhances competitiveness in terms of cost reductions and reduces environmental liabilities. It also enables companies to be better prepared for future environmental regulations. The key focus is on inputs and outputs of business operations and the assessment of trends in the consumption of natural resources and the production of environmental waste products specific to each industry.

Performance Summary	
Question Level Company Performance	88
Question Weight	14
Year-on-Year Change	38
Industry Average Score	28
Industry Highest Score	100

The question layout and the company's verified information is provided below. No information is shown if the company did not provide any information or if it opted out of sharing non-public information.

Key Definitions

GHG scope 2: Indirect impacts- energy use: Many companies report on the GHG emissions incurred in the generation of the electricity they consume and for service companies these indirect emissions can be more important than their direct environmental impacts. There are also some ways that companies can mitigate these emissions, for example by paying a renewable tariff or improving energy efficiency.

Data Requirements

Specific data requirements for Indirect Greenhouse Gas Emissions (Scope 2)

• Greenhouse gas emissions should be reported as metric tons of CO2-equivalents. Data on greenhouse gas emissions should include CO2 and all other greenhouse gas emissions weighted according to greenhouse gas potential.

• Measuring Scope 2 emissions is recommended to be performed according to the **market-based method** of the Greenhouse Gas Protocol. However the **location-based method** is equally accepted. (cf. Greenhouse Gas Protocol Scope 2 Guidance, January 2015)

o **Location-based method:** reflects the average emissions intensity of grids on which energy consumption occurs (using mostly grid-average emission factor data).

o **Market-based method:** reflects emissions from electricity that companies have purposefully chosen (or their lack of choice). It derives emission factors from contractual instruments, which include any type of contract between two parties for the sale and purchase of energy bundled with attributes about the energy generation, or for unbundled attribute claims.

Disclosure requirements for partially public question. Additional credit will be granted for relevant publicly available evidence covering the following aspect of this question:

- Indirect greenhouse gas emissions (scope 2) figure for at least the most recent reported year

Third-party verification: For third-party verification, we expect that data in the most recent year reported has been third-party verified and that relevant documentation is attached showing this verification. Internal audits or verification will not be considered.

Data consistency

• If the environmental performance data reported in the questionnaire do not correspond to the publicly reported figures, the corresponding option should be marked and the discrepancy should be explained. This option should not be indicated if the information is not publicly reported at all.

• If there is a temporary reduction in coverage due to a corporation action, the corresponding box should be marked and the reduction should be explained

• If it is not possible to report the figures in absolute terms, the data should be reported in relative terms and the corresponding box should be ticked. Please note that information should always be reported in absolute terms if possible, even if it deviates from public reporting. If relative figures are indicated, this need to be done for ALL environmental performance figures and the denominator should be set to 1

• If GHG emissions are only reported and tracked as combined Scope 1 and Scope 2 emissions, the combined figures should be indicated in the previous question (EP- Direct Greenhouse Gas Emissions (Scope 1), the corresponding box should be ticked and this question, should be marked as Not Applicable.

• If the market-based method for accounting for indirect GHG emissions has not been used, figures based on the location-based method should be indicated and the corresponding box should be ticked.

General data requirements

Environmental performance data should cover the activities of the entire company with the same consolidation as used in financial reporting and must refer to the financial year (e.g., 01/01 to 31/12 for both financial and environmental data) and be aligned with the figures reported in the Company Information section

Target: We require the absolute target for the most recent reporting year. If your company has a multiple year and/or relative target, please extrapolate what the target value would have to be for the last financial year to make sure you are progressing well towards achieving the target by the end of the target period. As a consequence, environmental performance data should only cover the indirect emissions/resource use, i.e., resource use/emissions caused by the company and its consolidated activities. Emissions and resource use of suppliers and customers should be excluded. In particular, environmental data of group companies should follow the following rules:

- Environmental data of companies that are consolidated at-equity must not be considered.
- Environmental data of companies that are consolidated proportionally must be considered to the proportion at which they are consolidated financially.
- Environmental data of companies that are fully consolidated must be fully considered irrespective of the proportion to which they belong to the group.
- Environmental data of business travel other than by owned and/or operated fleet should not be included unless specifically asked for.
- Environmental data should refer to the specific company structure of each particular year. There should be no pro-forma backward consolidation of the current company structure.
- Environmental data of companies that are sold or no longer consolidated should be excluded from environmental data as of the reporting period in which the company has not been consolidated any more.
- Environmental data of companies that have been bought should only be included as of the reporting period in which the company is consolidated financially for the first time.
- Where environmental data does not cover all consolidated activities of the company, the scope should be indicated together with the environmental data that is known.
- Indicators where a company has no emissions/resource use, 0 should be filled.
- Where the reported environmental data deviates from these definitions you are asked to explain in what way the data provided differs from the definitions.
- If a company publicly reports on long-term but not annual targets, an annual target has to be estimated based on internal target setting or a linear distribution.
- The data must be provided in the unit indicated in the question. If the company is tracking the specific indicator in a different unit, the unit converter must be used to convert the data into the preferred unit.
- Please ensure that the Company Information section has been correctly filled in, and that the coverage in the table below is based on the same denominator.

References

GRI Standard 305-2 is relevant for this question.

Data View

QUESTION LEVEL INPUT	COMPANY ANSWER
Reliable and auditable data for company's indirect GHG emissions (Scope 2) is available	Applicable
Indirect greenhouse gas emissions from energy purchased and consumed (scope 2) (2016) (met. ton. CO2e)	292,632.000
Indirect greenhouse gas emissions from energy purchased and consumed (scope 2) (2017) (met. ton. CO2e)	338,112.000
Indirect greenhouse gas emissions from energy purchased and consumed (scope 2) (2018) (met. ton. CO2e)	433,914.000
Indirect greenhouse gas emissions from energy purchased and consumed (scope 2) (2019) (met. ton. CO2e)	294,987.000
Indirect Greenhouse Gas Emissions from energy purchased and consumed (scope 2) target for last FY (met. ton. CO2e)	Not answered

Grupo Bimbo, S.A.B. de C.V. | ESG Scores Raw Data

QUESTION LEVEL INPUT	COMPANY ANSWER
Indirect Greenhouse Gas Emissions: Data coverage (2016)	100
Indirect Greenhouse Gas Emissions: Data coverage (2017)	100
Indirect Greenhouse Gas Emissions: Data coverage (2018)	100
Indirect Greenhouse Gas Emissions: Data coverage (2019)	100
Public reporting: Indirect GHG Emissions (scope 2) data is publicly available	YES
Third party verification: Indirect GHG Emissions (scope 2) data verified by third party in the most recent FY	-
Data consistency: Indirect GHG Emissions (scope 2) data reported above differs from publicly available data	-
Data consistency: Temporary coverage reduction or target challenge in Indirect GHG emissions (Scope 2) data due to corporate actions	YES
Data consistency: Explanation for Indirect GHG Emissions (Scope 2) coverage reduction due to corporate actions satisfactory	100
Data consistency: Indirect GHG Emissions (scope 2) data not reported in absolute terms and is normalized	-
Indirect GHG emissions are measured by location-based method instead of market-based method	-

Questionnaire

Please provide your company's indirect greenhouse gas emissions from energy purchased (purchased and consumed, i.e. without energy trading) (IGHG SCOPE 2) for the part of your company's operations for which you have a reliable and auditable data acquisition and aggregation system. Please refer to the information button for additional clarifications. For each row in the table, it is mandatory that the values provided are in the same unit. Also, please ensure that you have correctly filled in the Company Information section at the beginning of the questionnaire, and that the coverage in the table below is related to the denominator relevant for your company as indicated in that section.

1. (●)

IGHG (Scope 2)	Unit	FY 2016	FY 2017	FY 2018	FY 2019	What was your target for FY 2019?
Indirect greenhouse gas emissions from energy purchased and consumed (scope 2)	metric tonnes of CO2 equivalents	292632	338112	433914	294987	Not answered
Data coverage (as % of denominator)	percentage of:	100	100	100	100	

PUBLIC REPORTING

1. [x] Our data is publicly available. Please provide supporting evidence or web link.

THIRD-PARTY VERIFICATION

1. [ ] Our data has been third-party verified in the most recent financial year reported. Please provide supporting evidence.

DATA CONSISTENCY

1. [ ] We report publically on this information, but the data in the table above differs from our publicly reported figures. Please provide an explanation in the comment box for this difference:
2. [x] We have a temporary coverage reduction or target challenge due to corporate actions. Please briefly explain if a merger, acquisition, divestment, etc. has temporarily caused a reduction in your ability to report optimal coverage or caused your target to appear abnormal:

   100
3. [ ] We are not able to report this information in absolute terms, the information provided in the table above is normalized data. For the purpose of this question, please always provide absolute figures if available.
4. [ ] We measure our indirect greenhouse gas emissions according to the **location-based method** instead of the **market-based method** (see the information button for further details).

2. ( ) We do not track indirect greenhouse gas emissions
3. ( ) Not applicable. Please provide explanations in the comment box below.
4. ( ) Not known
